CSS Cust #:

CRM Cust #:

Pump Ref.#: 2871

CSS Serv. Acct.:

CRM Serv. Acct.:

Meter: 732-3114

The following energy efficiency analysis is presented as an aid to your cost accounting. This is an estimate based on the conditions present during the Edison pump test performed on January 26, 1984, billing history for the past 12 months, and your current rate of GS-2.

Assuming that water requirements will be the same as for the past year, and all operating conditions (annual hours of operation, head above, and water pumping level) will remain the same as they were at the time of the pump test, it is estimated that:

1. Overall plant efficiency can be improved from 47.9% to .0%.
2. This can save you up to 0 kWh and \$0.00 annually.

	<u>Existing</u>	Plant Efficiency <u>Improved</u>	<u>Savings</u>
Total kWh	85,632	85,632	
kW Input	31.50	31.50	.00
kWh per Acre Foot	792	792	
Acre Feet per Year	108.1		
Average Cost per kWh	\$0.00		
Average Cost per Acre Foot	\$0.00	\$0.00	\$0.00
Overall Plant Efficiency (%)	47.9		
<hr/>			
Total Annual Cost	\$0.00	\$0.00	\$0.00

It is sincerely hoped that this information will prove helpful to you, and that your concerns over maintaining optimum energy efficiency will be continued. If you have any questions regarding this report, please contact UNKNOWN USER at .
