Scenario Memo

No.	Scenario Name	Memo
1	Bozigian	

Due to the many variables affecting energy costs, Edison does not guarantee any level of savings when changing to another rate schedule. Please discuss this report with your Edison representative to ensure your understanding of the variables that can affect actual savings.

As of 03-01-2008 tariff date, generation calculation is based on an assumed annual basis of 20.45% for DWR and 71.55% for SCE of total bundled service load.

The information contained in this report may be based on actual historical energy consumption and, on assumptions regarding future energy consumption patterns and amounts. Assumptions made may include, but are not limited to, changes in rates, operating hours, equipment, weather patterns, service voltage, firm service levels, and added facilities charges.

Billing Summary

Data displayed in this report is current as of the date of the most recent billing period seen in the Billing Summary section below. Account activity subsequent to this date may impact the data presented in this report.

* The average cost/kWh value is determined by dividing the total bill amount by the total quantity of kWh usage. The total bill amount, and therefore the average cost/kWh, contains all charges including, but not limited to, energy charges, demand charges, service charges, late payment charges, and applicable taxes.

As of 05-01-2009 tariff data, generation calculation is based on an assumed actual basis of 23.45% for DWR and 71.55% for SCE of total bundled service load.

The information contained in this report may be based on actual historical energy consumption and, or, assumptions regarding future energy consumption patterns and amounts. Assumptions made may include, but are not limited to, changes in rates, operating hours, equipment, weather patterns, service voltage, firm service levels, and added facilities changes.
