FOR THE COUNTY OF LOS ANGELES - CENTRAL DISTRICT

Coordination Proceeding, Special Title (Rule 1550(b)) **ANTELOPE VALLEY GROUNDWATER CASES**	Judicial Council Coordination Proceeding No. 4408 LASC Case No.: BC 325201 Assigned to the Hon. Jack Komar, Judge of the Santa Clara Superior Court Santa Clara Court Case No. 1-05-CV-049053 **ANTELOPE VALLEY WATERMASTER'S ANNUAL REPORT FOR 2024**

Pursuant to the requirements of the Judgement and Physical Solution (Section 18.5.17) as modified by this Court's Order dated April 30, 2018, the Antelope Valley Watermaster hereby submits its 2024 Annual Report (dated July 24, 2025) as required by the terms of the Judgment. The Watermaster Board unanimously approved the filing of this 2024 Annual Report with this Court pursuant to passing Resolution No. 25-34 on July 23, 2025.

PROOF OF SERVICE

STATE OF CALIFORNIA, COUNTY OF SANTA BARBARA

I am employed in the County of Santa Barbara, State of California. I am over the age of eighteen (18) and not a party to the within action. My business address is 200 East Carrillo Street, Fourth Floor, Santa Barbara, California 93101.

On July 24, 2025, I served the foregoing document described as **ANTELOPE VALLEY WATERMASTER'S ANNUAL REPORT FOR 2023** on all interested parties in this action by placing the original and/or true copy.

☒ **BY ELECTRONIC SERVICE:** I posted the document(s) listed above to the Santa Clara County Superior Court Website @ www.scefiling.org and Glotrans website in the action of the Antelope Valley Groundwater Cases.

☒ (*STATE*) I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

☐ (*FEDERAL*) I hereby certify that I am employed in the office of a member of the Bar of this Court at whose direction the service was made.

Executed on July 24, 2025, at Santa Barbara, California.

Signature
Elizabeth Wright

Ninth Annual Report, Calendar Year 2024

Antelope Valley Groundwater Cases, Judicial Council Coordination Proceeding No. 4408, Santa Clara Case No.: 1-05-CV-049053, Superior Court of the State of California, County of Los Angeles - Central District

Antelope Valley Watermaster Board of Directors

The Antelope Valley Watermaster is charged with administering adjudicated water rights and managing groundwater resources within the Adjudication Area of the Antelope Valley. For 2025, the five-member Watermaster Board consists of:

<u>Board</u>
Robert Parris, Chairperson
Kathy Mac Laren, Vice Chairperson
Carolina Hernandez
Brandon Calandri
Derek Yurosek

<u>Alternates</u>
Audrey Miller
Adrienne Reca
Angelica Martin
Barbara Hogan
Ramy Gindi
Drew Mercy

From Top Left Clockwise: Peter Thompson, Arden Wells, Craig Parton, Patti Rose, Angel Fitzpatrick, Carolina Hernandez, Kathy Mac Laren, Rob Parris, Brandon Calandri, and Angelica Martin at the May 28, 2024 meeting

MESSAGE FROM THE WATERMASTER

Calendar year 2024 was the Antelope Valley Watermaster's ninth year of administering the Judgment, and the second year after the Rampdown Period ended. The basin has been brought into balance in accordance with the Judgment-defined Native Safe Yield. Over the past nine years, the Watermaster has developed and implemented management procedures and practices to meet the Basin's changing needs. Annual groundwater production, excluding the recovery of stored water, has decreased to below the target safe yield since 2019.

In 2024, Antelope Valley received average precipitation, and State Water Project contractors received 40 percent of their Table A allocations. This normal year, following the whiplash of very dry conditions in 2021 and 2022 and wet conditions in 2023, provided an opportunity for the continued recharge of imported water. In general, groundwater levels increased from Spring 2024 and Spring 2025.

This Annual Report includes a new Water Balance section. In 2024, the Watermaster Engineer completed an update of the Antelope Valley Groundwater Model, originally developed by the USGS in 2014. This management tool allows the Watermaster to simulate and quantify the water balance, or the inflows and outflows to and from the Basin. Previous Antelope Valley Watermaster Annual Reports have used the change in water levels from Spring to Spring to calculate the change in groundwater volumes. This Annual Report shows the water balance for each year since the Judgment was implemented, calculated using reported data and the Antelope Valley Groundwater Model. This new method both increases accuracy and follows the Department of Water Resources' Best Management Practices for water budget calculation. The modeled water balance shows a net positive change in groundwater volume of 99,800 AF in Calendar Year 2024, reflecting high native and imported water recharge rates in 2023 and 2024.

The Watermaster continued to refine the procedures for administering the Judgment. The Watermaster continued discussions surrounding the processes surrounding Carry Over water once it ages to ten years and requires a storage agreement, and a tool to calculate the age of Carry Over across years and transfers was developed by the Watermaster Engineer. Watermaster Admin Staff brought several parties into compliance and worked towards refining procedures to incentivize reporting with increased efficiency.

STATE OF THE BASIN SUMMARY

Summary information regarding administration, implementation, and enforcement of the Judgment as provided in this 2024 Annual Report is listed below.

- 2024 is the ninth year since the Final Judgment in 2015.
- 2024 is also the second year since the end of Rampdown on December 31, 2022.
- Total reported Production and estimated Small Pumper production was 68,957 AF, including the recovery of stored water (63,563 AF excluding the recovery of stored water). This is the minimum reported production to date and is below the Native Safe Yield value defined in the Judgment (82,300 AFY).

- During 2024, 105,694 AF of State Water Project water was imported into the Basin. 65,922 AF of this State Water Project water was imported by Antelope Valley East Kern Water Agency (AVEK), Palmdale Water District (PWD), and Littlerock Creek Irrigation District (LCID) for use in the Basin, and 29,384 AF was recharged at groundwater storage and recovery facilities in the Basin. Metropolitan Water District recharged 38,432 AF of imported water at the High Desert Water Bank, for use outside the Basin.
- The Watermaster focused efforts on improving metering compliance and production reporting in 2024.
- The Watermaster began discussing the processes of developing storage agreements for Carry Over water once it is ten years old. The Watermaster Engineer developed a tool to track the age of Carry Over as it is accrued, used, and transferred.
- In total, 84.45 AFY of New Production was approved in calendar year 2024. All reported New Production will be replaced with imported water funded by Replacement Water Assessments or with transfers of groundwater rights from other Parties within the Basin.
- The Antelope Valley Groundwater Model Update was completed in 2024. The water Budget section, using the model, is included in this Annual Report.
- Long term hydrographs and water level contour maps indicate that water levels have either stabilized or the rates of decline have decreased in recent years when compared to the preceding 24-year period.
- A large positive change in groundwater volume was calculated for 2024. The estimated change in groundwater volume in the Basin increased by 99,800 in 2024. The model results calculated the total change in groundwater volume from 2016-2024 to be 185,600 AF.

1 INTRODUCTION

The Judgment and Physical Solution for the Antelope Valley Groundwater Adjudication represents more than 15 years of complex proceedings among more than 4,000 parties including public water suppliers, landowners, small pumpers and non-pumping property owners, and the federal and state governments. Through four phases, the adjudication defined the boundaries of the Basin[1], considered hydraulic connection throughout the basin, established the safe yield, and quantified groundwater production. The Judgment documented overdraft conditions, established respective water rights among groundwater producers, and ordered a rampdown of production to the native safe yield.

The adjudication provides a framework to sustainably manage the basin to reverse groundwater level declines and reduce subsidence. The Final Judgment was entered on December 23, 2015 and is posted on the Watermaster website (www.avwatermaster.net). To administer the Judgment, the Court directed the appointment of a Watermaster consisting of a five-member board of directors representing the Parties. In 2016, the Watermaster Board and an Advisory Committee (both entities required under the Judgment) were formed. In 2020, the Board approved the Rules and Regulations (R&Rs) to provide procedures and processes for implementation of the Judgment.

Under the Judgment, the Watermaster Engineer has the responsibility of preparing annual reports for the Court; this document is the seventh such report. In 2018, the Watermaster Board requested and was granted a permanent filing date of August 1st for submittal of the Annual Report to the Court covering the previous calendar year. This 2024 Annual Report is being provided to the Court in compliance with the August 1, 2025 deadline.

1.1 BACKGROUND

The Antelope Valley Groundwater Basin is located in the western Mojave Desert, covering 1,580 square miles in portions of Los Angeles, Kern, and San Bernardino counties (**Figure 1**). The groundwater basin boundaries have been defined by the California Department of Water Resources (DWR Basin Number 6-44) and extend beyond the Adjudication Area.

The Antelope Valley Area of Adjudication covers approximately 1,390 square miles of the groundwater basin (**Figure 1**)**.** The Adjudication Area does not include the adjacent alluvial portions of the groundwater basin to the northeast and south and is truncated at the Los Angeles-San Bernardino County Line in the southeast. Subsurface flows between these adjacent alluvial areas and the Adjudication Area are generally considered nominal and the portion of the Antelope Valley Groundwater Basin that extends southeast into San Bernardino County is within the Mojave Basin Area adjudication.

The Adjudication Area was divided into five Subareas for management purposes (**Figure 1**):

[1] The Final Judgment defines Basin as the Area of Adjudication determined by the Court. Basin is capitalized in this report when referring to the Area of Adjudication. To avoid confusion, the terms *Antelope Valley Groundwater Basin* or *groundwater basin* refer to the DWR-defined groundwater basin.

- Central Antelope Valley Subarea
- West Antelope Valley Subarea
- South East Subarea
- Willow Springs Subarea
- Rogers Lake Subarea.

A native safe yield of 82,300 acre-feet per year (AFY) was established by the Court for the Antelope Valley Area of Adjudication and many Parties to the adjudication were granted Production Rights (i.e., allocated a portion of the native safe yield) on various bases. To achieve sustainable groundwater elevations, groundwater production from the Native Safe Yield would be reduced (ramped down) over a seven-year period (2016-2023) to a final Production Right. The diagram on the right side of **Figure 2**[2] shows the Judgment's apportionment of native safe yield to the various Judgment types of Production Rights.

The Physical Solution quantifies the reduction of groundwater production within the Adjudication Area over time to reach the native safe yield. During this Rampdown Period, certain Parties to the Judgment have been allowed to produce groundwater in excess of their Production Right (beginning with a Pre-Rampdown Production amount) without incurring a Replacement Obligation. Certain Parties are also allowed credit for Imported Water Return Flows, Carry Over water, and Stored Water under the distinct circumstances defined in the Judgment. Certain Parties without a Production Right can also produce groundwater under certain conditions as provided by the Judgment. Finally, additional production in excess of a Production Right is allowed to certain Parties provided the Watermaster approves their application for New Production, and they pay a Replacement Water Assessment. These seven potential production categories are listed on the left side of **Figure 2** and summarized below.

- The Production Right is the portion of the Native Safe Yield assigned to each Party (see diagram on the right of **Figure 2**). Production Rights for specific Parties are defined in the Judgment in Exhibit 3 (Non-Overlying Production Rights), Exhibit 4 (Overlying Production Rights), and in Paragraphs (¶) 5.1.3, 5.1.4, 5.1.5, and 5.1.10 of the Judgment for the Small Pumper Class, Federal Reserved Water Rights, and State of California, respectively.
- Pre-Rampdown Production is defined in the Judgment as the reasonable and beneficial use of groundwater, excluding Imported Water Return Flows, at a time prior to the Judgment, or the Production Right, whichever is greater. During the seven-year Rampdown Period, production has been reduced – or ramped down – from the Pre-Rampdown Production Right to the Production Right for certain Parties with Pre-Rampdown Production rights.
- Imported Water Return Flows represent water brought into the basin from outside of the watershed that provides a net increase in groundwater supply (i.e., does not include consumed or evaporated imported water). Return flows were established in the Judgment at 34 percent of imported water used for agriculture and at 39 percent for municipal and industrial uses.

[2] The sum of the individual production rights is 82,280.63 AFY; this sum was rounded in the Judgment to 82,300 AFY.

- Carry Over is the right to an unused portion of an annual Production Right or a right to Imported Water Return Flows in a year after the year in which the right was originally available.
- Stored Water is water held in storage in the basin as a result of direct spreading or other methods for subsequent withdrawal and use pursuant to an agreement with the Watermaster. It does not include Imported Water Return Flows or Native Safe Yield, but can include Carry Over water that is converted to Stored Water pursuant to a Storage Agreement.
- Other Rights to Produce Groundwater are outlined in Paragraphs 5.1.7 through 5.1.9 and other portions of the Judgment. Such rights include entities that are required to switch to recycled water when available[3]. This category also includes the right of Phelan Piñon Hills Community Services District to produce groundwater from the basin for export to its service area under specific conditions in the Judgment (¶6.4.1.2).
- Additional Production (New Production) is any production of groundwater from the Basin not of right under this Judgment, as of the date of the Judgment. New Production can be approved by the Watermaster on a showing that the use is reasonable and will not cause Material Injury, and all New Production would be subject to a Replacement Obligation; for such pumping, the producer would need to pay a Replacement Water Assessment. Replacement Water will be purchased by the Watermaster or otherwise provided to satisfy the Replacement Obligation.

The Judgment limits the amount of groundwater production that can be produced without incurring a Replacement Obligation (i.e., purchase of imported water to offset the production). Types of production that do not incur a Replacement Obligation include Production Rights (up to the Native Safe Yield, and including Carry Over of unused portions of Production Rights), recovery of Imported Water Return Flows (including Carry Over of unused portions of Imported Water Return Flows), or recovery of Stored Water. While this report indicates that reductions in Production will occur as Parties are ramping down production rights to the Native Safe Yield, such reductions may not be required to the extent that the over-production is offset with Replacement Water.

1.2 PURPOSE AND SCOPE

The Watermaster Engineer is responsible for the preparation of annual reports for submittal to the Court. The purpose of the annual report is to document the progress and details regarding implementation of the Judgment including a review of Watermaster activities. Information is provided regarding the operation and management of the groundwater basin and water supplies during the preceding year. A list of the minimum required elements to be compiled in the annual reports is provided in ¶18.5.18 of the Judgment; these elements are reproduced in **Table 1**, with reference to the associated locations in this report. If there are any conflicts or ambiguities related to legal provisions or interpretations between the Judgment and the Annual Report, the Judgment is the controlling document.

[3] Non Stipulating Parties includes the Supporting Landowners identified in the Statement of Decision.

Table 1. Minimum Required Elements for the 2024 Annual Report

Judgment Paragraph	Element	Report Location
18.5.18.1	Replacement Obligations	Section 5.6, Appendices B and E
18.5.18.2	Hydrologic Data Collection	Section 3
18.5.18.3	Purchase and Recharge of Imported Water	Section 5.4, Section 5.8, Appendices C and E
18.5.18.4	Notice Lists	Appendix L
18.5.18.5	New Production Applications	Section 5.11, Appendix H
18.5.18.6	Rules and Regulations	Section 1.5.7
18.5.18.7	Measuring Devices	Section 3.9
18.5.18.8	Storage Agreements	Section 5.8, Appendix G
18.5.18.9	Annual Administrative Budget	Section 1.6, Appendix 3
18.5.18.10	Transfers	Section 5.7, Appendix F
18.5.18.11	Production Reports	Section 5.3, Appendix B
18.5.18.12	Prior Year Report	Section 2
18.5.18.13	Amount of Stored Water owned by each Party	Section 5.8, Appendix C, Appendix B-6
18.5.18.14	Amount of Stored Imported Water owned by each Party	Sections 5.3, 5.4 and 5.8, Appendices B, C and D
18.5.18.15	Amount of Unused Imported Water Return Flows owned by each Party	Section 454, Appendices B and D
18.5.18.16	Amount of Carry Over Water owned by each Party	Section 5.3 and 5.5, Appendix B
18.5.18.17	All Changes in Use	Section 5.10

1.3 REPORT ORGANIZATION

The report provides background and supporting information about Watermaster activities and safe yield monitoring for calendar year 2024, and detailed water accounting for 2024 groundwater use by the Parties to the Judgment. These topics are organized into five primary sections and accompanying appendices as described below.

Section 1 of this report provides an introduction and context for the 2024 Annual Report, including purpose and scope. **Section 1.4** summarizes the stakeholder review process including posting and notice of the report and a public hearing. Information on the Watermaster management structure, including an organization chart, is provided in **Section 1.5**. That section also summarizes the current roles and responsibilities of the Watermaster Board, administrative staff, the Advisory Committee, Watermaster legal counsel, and the Watermaster Engineer. **Section 1.6** provides a summary of Watermaster finances.

Section 2 summarizes activities and actions by the Watermaster in 2024 associated with implementation of the Judgment.

Section 3 presents relevant monitoring data of Safe Yield components in the basin. To provide context for these data, a summary of the safe yield calculation in the Judgment is provided in **Section 3.1**. This summary includes a brief review of the components of natural groundwater recharge relating to the hydrologic system (see Schematic Diagram on **Figure 3**). Components of both the Native Safe Yield and the Total Safe Yield are also discussed, including natural recharge, return flows from urban and agricultural water use, and imported water (including return flows from imported water use). Components of the Total Safe Yield are represented conceptually on **Figure 4**. **Sections 3.2** through **3.9** document the monitoring of safe yield components, including climate, streamflow, groundwater levels and quality, subsidence, and production. **Section 3.5** provides preliminary analyses of historical and current groundwater levels.

Section 4 provides a summary of the Water Balance, or water budget, calculated using the updated Antelope Valley Groundwater Model. This includes an estimate of the change in storage, or groundwater volume, during calendar year 2024.

Section 5 provides details on the water accounting for the Parties to the Judgment. Rights to produce groundwater under the Judgment are summarized in **Section 6.1**. Water accounting includes documentation of the Rampdown schedule (**Section 5.2**), 2024 Production and water accounting (**Section 5.3**), imported water use and Imported Water Return Flows (**Sections 5.4**), Carry Over water (**Sections 5.5**), and information on Replacement Obligations (**Section 5.6**), Transfers (**Section 5.7**), Stored water and Storage Agreements (**Section 5.8**). The Drought Program is discussed in **Section 5.9.** Changes in use and well applications for new or replacement production wells are discussed in **Sections 5.10** and **5.11. Section 5.12** provides details on the wastewater and recycled water practices that occurred within the Adjudication Area in 2024. As illustrated in **Table 1** above, much of the water accounting – including reported groundwater production – is provided in appendices to this report. Relevant appendices for each water accounting topic are referenced in each water accounting topic of **Section 5**.

Section 6 lists the technical documents reviewed and referenced in this 2024 Annual Report.

The appendices contain supporting material and details of the water accounting process. The attached appendices are printouts of active water accounting files; on occasion, a cell will contain a notation "#VALUE!". This signifies a current incomplete formula in the electronic file; these notations have been retained in water accounting tables in this report to maintain the ongoing operational integrity of formulas in the files. **Table 2** provides a detailed description of each of the appendices and sub-appendices for reference.

Table 2. Description of Appendices

Appendix		Description
A	**Rampdown Schedules** **A-1**. Exhibit 3 Non-Overlying and Non-Stipulating Parties Rampdown Schedule **A-2**. Exhibit 4 Overlying Producers Rampdown Schedule	Appendix A contains the Rampdown schedule for 2016-2024 for each Party. Beginning in 2018, Pre-Rampdown Production is reduced in equal increments each year to reach the Production Right by the end of the Rampdown Period.
B	**Water Accounting Tables** **B-1**. Exhibit 3 Non-Overlying Producers Water Accounting **B-2**. Exhibit 4 Overlying Producers Water Accounting **B-3**. Other Parties (Non-Exhibit 3 or Exhibit 4) Water Accounting **B-4**. New Production Water Accounting **B-5**. Parties with Multiple Rights to Produce **B-6.** Water Accounting Summary for all Parties **B-7** Carry Over Water by Age	Appendix B presents detailed accounting by water source (Production Right, Rampdown, unused Federal Reserved Water Rights, Imported Water Return Flows and Carry Over water) for groundwater produced in 2024 for each Party. Note that all Parties may not have rights to all source types. Table B-4 presents water accounting for entities granted New Production. Table B-5 is a list of Parties that have multiple rights to produce. Table B-6 is a list of available water for use by Party, in alphabetical order. This includes Federal, California, Exhibit 3, Exhibit 4, Non-Stipulating, and New Production Parties. Table B-7 shows the age of Carry Over Water for each applicable Party in full compliance.
C	**Imported Water, 2024** **C-1**. Imported Water, 2024 **C-2**. AVEK Storage and Recovery Locations, 2024 **C-3**. Other Storage and Recovery Locations, 2024 **C-4.** RCSD Storage and Recovery, 2024	Appendix C-1 provides details on the amounts of water imported into the Antelope Valley watershed, amounts recharged (banked), and amounts sold to customers by AVEK, PWD, and LCID in 2024. Appendices C-2 and C-3 summarize the amount of imported water stored at the beginning of 2024, amounts recharged and recovered in 2024, and the amount of recoverable imported water stored at the end of 2024 at AVEK storage and recovery locations (C-2) and at other storage and recovery locations (C-3). Appendix C-4 summarizes banked water by RCSD.
D	**Imported Water Return Flows**	Appendix D presents annual imported water use for 2011-2024 and rights to Imported Water Return Flows for 2016-2024 by the 37 Parties on Exhibit 8. Return flows from imported water use are set by the Judgment at 34 percent for agricultural use and 39 percent for municipal and industrial imported water use.
E	**Replacement Obligations**	Replacement Obligations and Replacement Assessments for 2016-2024 are listed in Appendix E.

Appendix		Description
F	**Transfers** **F-1**. Permanent Transfers (not related with split of rights or simple property sale) **F-2**. Non-Permanent Transfers **F-3**. Split of Production Rights Transfers **F-4**. Transfers Related to Property Sales (Exhibits 3 and 4 Parties only) **F-5**. Investment Only Transfers	Appendix F-1 provides details on all permanent transfers that have occurred since implementation of the Judgment. Appendix F-2 lists the one-time transfers. Appendix F-3 lists transfers associated with a split of Production Rights. Appendix F-4 lists transfers associated with Exhibit 3 or Exhibit 4 Party property sales. Appendix F-5 lists investment only transfers where the place of use is not yet defined and no Material Injury analysis has yet been performed.
G	**Storage Agreements**	Approved Storage Agreements are listed in Appendix G.
H	**Approved Well Applications and Small Pumper Qualifying Documentation**	Appendix H contains a table of the well applications and Small Pumper Qualifying Documentation that have been approved through 2024.
I	**AVEK Facilities Map and Water Use Flowchart**	Appendix I contains the following information provided by AVEK: • AVEK facilities location map • Flowchart depicting the distribution of AVEK's imported water, groundwater, and recovered water supply in 2024
J	**Wastewater and Recycled Water, 2024**	Antelope Valley area wastewater is treated at LACSD's Palmdale and Lancaster WRPs, EAFB Air Force Research Laboratory Treatment Plant and the Main Base WWTP, and the RCSD WWTP. Quantities of effluent and reuse for 2024 are tabulated in Appendix J.
K	**Watermaster Financial Budgets** K-1. Approved Financial Budget, 2025 K-2. Financial Audit, 2024	Appendix K contains an approved budget for 2025 and an audit of all revenue and expenditures for 2024.
L	**Notice Lists**	Appendix L contains a list of parties to receive notices from the Watermaster.
M	**Delinquent Administrative Assessments and Delinquent Production Reports** **M-1**. Delinquent Assessments **M-2**. List of Parties with Incomplete Annual Production Reporting	Appendix M contains current lists of delinquent assessments and delinquent production reporting.

Appendix		Description
N	List of Forms	Appendix N contains a list of forms available on the Watermaster website.

1.4 Stakeholder and Public Review and Comment

This seventh annual report will be submitted to the Court on or by August 1 in compliance with the filing deadline approved by the Court[4]. A Draft Annual Report was posted on the Watermaster website on June 11, 2025, and reviewed by the Watermaster at a Board meeting on June 25, 2025. After incorporating comments from the Board, the Advisory Committee, and other Parties/stakeholders, a Revised Draft was posted on the Watermaster website on July 3 for final review.

The Watermaster Board held a noticed public hearing on July 23, 2025, to consider public comments on the Revised Draft 2024 Annual Report. On July 23, 2025, the Watermaster unanimously voted to consider and incorporate additional comments received prior to and at the June 25 public hearing. The Watermaster also unanimously approved the filing of the Final 2024 Annual Report, which incorporated the Board-recommended comments, to the Court by August 1, 2025 (Resolution No. R-23-56).

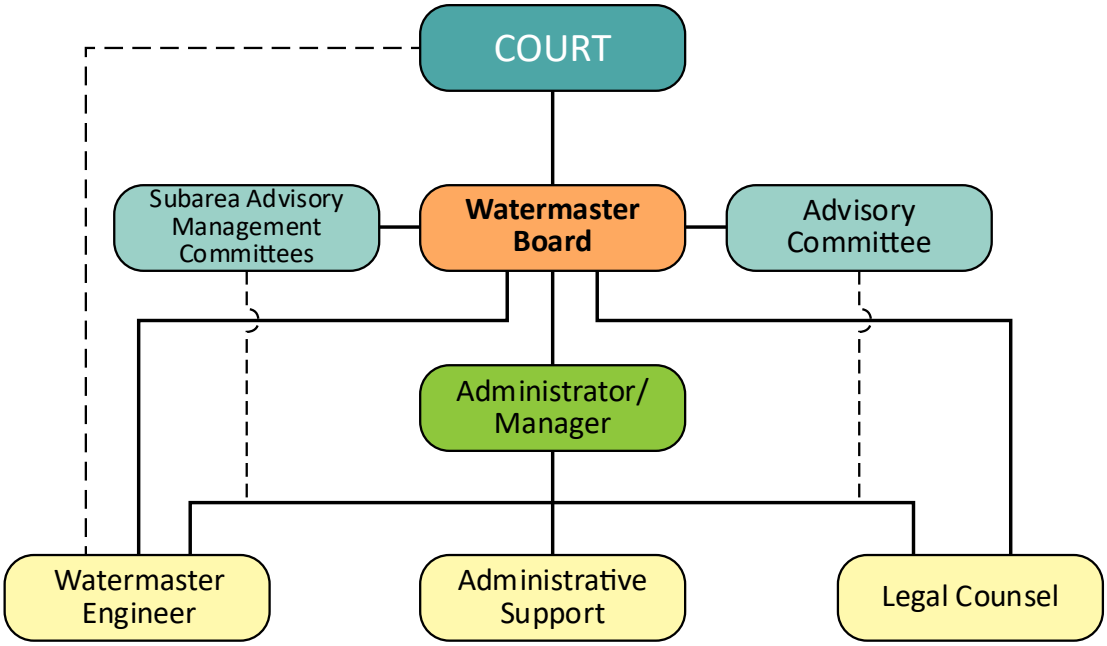

1.5 Antelope Valley Adjudication Management

The Judgment identified the powers and duties of specific entities charged with carrying out the Physical Solution. The Watermaster Board functions as the arm of the Court and is assisted by the Watermaster Engineer, the Watermaster Legal Counsel, and Watermaster Administrative Staff to implement the Physical Solution. The Advisory Committee acts in an advisory role and makes recommendations on discretionary determinations by the Watermaster Board. The Subarea Advisory Management Committees, while formed only recently, will also act in an advisory capacity regarding recommendations on discretionary determinations made by the Watermaster Engineer that may affect that Subarea. At this time, as outlined in the Rules and Regulations, the Advisory Committee allocates time twice a year for a Subarea Management meeting, during which Parties can discuss concerns related to their Subareas. Any Party may request formation of the Subarea Management Advisory Committees at any time in the future and without Watermaster approval.

A general organization chart that illustrates current working relationships is provided as follows. The roles and responsibilities of these entities are summarized in the following sections.

[4] Paragraph 18.5.17 of the Final Judgment requires that the Annual Report be filed no later than April 1 of each year. Recognizing the time needed for data reporting and compilation, along with the required public review process, the Watermaster Board requested and received approval from the Court to permanently move the filing deadline to August 1 of each year.

Antelope Valley Watermaster Organization Chart

1.5.1 Watermaster Board

The Court-appointed Watermaster Board consists of five members including:

- One representative from the Antelope Valley-East Kern Water Agency (AVEK)
- One representative from the Los Angeles County Waterworks District No. 40 (District 40)
- One public water supplier selected by District 40, Palmdale Water District (PWD), Quartz Hill Water District (QHWD), Littlerock Creek Irrigation District (LCID), California Water Service Company (Cal Water), Desert Lake Community Services District (DLCSD), North Edwards Water District (NEWD), City of Palmdale, City of Lancaster, Palm Ranch Irrigation District (PRID), and Rosamond Community Services District (RCSD), and
- Two landowner representatives (exclusive of public agencies and members of the Non-Pumper and Small Pumper Classes) who are selected by majority vote of the landowners identified on Exhibit 4 of the Physical Solution (or their successors in interest) based on their proportionate share of the total Production Rights identified on Exhibit 4.

The current Board members and their alternates are:

- AVEK: *Robert Parris (Chairperson),* alternate: *Audrey Miller (primary) and Drew Mercy (secondary)*
- District 40: *Carolina Hernandez, alternate: Ramy Gindi*

- Public Water Suppliers: *Kathy Mac Laren (Vice Chairperson),* alternate: *Barbara Hogan*
- Landowners: *Brandon Calandri and Derek Yurosek*, alternates: *Angelica Martin (primary) and Adrienne Reca (secondary)*

The Watermaster Board has certain responsibilities and powers as identified in Paragraph 18.4 of the Judgment, including:

- A responsibility to implement and enforce the Judgment through actions, motions, and service of notices, determinations, requests, demands, reports and other methods pursuant to the Judgment and the Rules and Regulations
- An obligation to carry out its duties in an impartial manner and to rely on best available information to support Judgment implementation
- Selection of Watermaster Engineer
- Preparation of Annual Administrative budgets and associated accounting and billing
- Documentation of groundwater use and transfers and other pertinent information
- Review of new production applications
- Maintenance of a notice list
- Conduct of regular meetings at least quarterly and in accordance with the Ralph M. Brown Act
- Oversight of the preparation of annual reports and a Rules and Regulations document.
-

The Board typically meets on the fourth Wednesday of each month, with all meetings conducted in compliance with the Ralph M. Brown Act. The Watermaster Board has generally conducted its affairs transparently, including holding interviews and deliberations in open session. The Watermaster has met in closed session consistent with the requirements of the Brown Act and the Watermaster Counsel has instructed the Watermaster members on their duty to represent all parties and to protect the confidentiality of information learned in closed session. All Watermaster decisions to date have been achieved through unanimous vote of the Board, although the Watermaster provided for meeting minutes to be approved using a simple majority vote.

1.5.2 Watermaster Engineer

Todd Groundwater was selected unanimously by the Watermaster Board as the Watermaster Engineer for the April 2017 to December 2019 period. Its contract has been extended three times –for two years to December 2021, for three years to December 2024, and for three years to December 2027. The Watermaster Engineer is to "perform engineering and technical analysis and water administration functions as provided for in this Judgment" (¶3.5.53 of the Judgment). Duties are identified in Paragraph 18.5 of the Judgment, including:

- Monitor safe yield components and collect hydrologic data

- Require Producers (other than unmetered Small Pumper Class members) to submit Production Reports
- Ensure reduction in groundwater production to the Native Safe Yield during the 2016 to 2022 Rampdown Period
- Propose measuring devices to monitor Production
- Determine if Material Injury to the Basin is occurring, including but not limited to conditions specified in the Judgment
- Determine Replacement Obligations
- Purchase and recharge Replacement Water
- Establish a new production application procedure, review applications and recommend approval or denial of such applications
- Maintain accounting of water stored under Storage Agreements
- Ensure that no person reduces the amount of storm flows that would otherwise enter the Basin
- Encourage appropriate regulatory agencies to enforce reasonable water quality regulations affecting the basin
- Establish memoranda of understanding with Kern and Los Angeles counties regarding well drilling ordinances and reporting
- Beginning in 2034, consider and potentially recommend change to Native Safe Yield
- Beginning in 2034, consider and potentially recommend changes to the calculation of Imported Water Return Flow percentages
- Rely on best available information to support Judgment implementation.
- Prepare an Annual Report for filing with the Court by August 1. The Watermaster requested and was granted a permanent extension to August 1 from the April 1 date in the Judgment
- Prepare Rules and Regulations for Watermaster proposal to the Court (¶18.4.2 of the Judgment).

Although not specified in the Judgment, the Watermaster also has reporting requirements under the Sustainable Groundwater Management Act (SGMA) for adjudicated basins (Cal. Water Code §10720.8). Required data on water use, groundwater monitoring, and other information are due to the California Department of Water Resources (DWR) by April 1 of each year (California Water Code Section 10720.8). Adjudicated basins that have Court filing dates for their Annual Reports after April 1 (such as the Antelope Valley Adjudication) are allowed to complete reporting later than April 1.

DWR requires an initial filing on the SGMA website by April 1 of each year to notify DWR that requested data are not yet available; SGMA reporting can be completed when data become available. Todd Groundwater completed the initial notification to DWR on March 22, 2025, prior to the April 1 deadline. For the Antelope Valley Watermaster, the completion of the SGMA reporting will occur concurrently with the Court filing of the Annual Report by August 1. Todd Groundwater will fulfill 2024 SGMA compliance reporting for the Watermaster following Watermaster approval of the Final 2024 Annual Report.

1.5.3 Watermaster Legal Counsel

Watermaster Legal Counsel advises the Board on legal matters and takes direction directly from the Board. In November 2017, the Watermaster unanimously selected Craig Parton of Price Postel & Parma LLP to provide legal services to the Board, including provision of legal opinions on implementation of the Judgment.

1.5.4 Administrative Staff and Functions

From 2016 to 2022, administrative functions of the Watermaster were shared between selected staff members of AVEK and Palmdale Water District (PWD). In September 2022, the Watermaster selected Hallmark Group Capital Program Management to serve as the Watermaster Administrator for 2023. This contract ended in December 2023. Staff members from AVEK were selected to serve as the interim Watermaster Administrator. In 2024 the Board began the process of selecting a new Watermaster Administrator. No administrator was selected, and AVEK continued as the interim Watermaster Administrator. A new request for proposals will be issued in 2025.

The Advisory Committee and Watermaster continue to have the authority to review the roles and responsibilities of the Watermaster Administrator to improve the level of service provided to the Watermaster. Currently, Watermaster Administrator performs the followings tasks for the Watermaster:

- Provide general oversight of all Watermaster activities and provide direction to consultants
- Work with the Watermaster Board to establish priorities and policy
- Provide accounting services (accounts receivables and bill payables)
- Administer assessment billings and collection process
- Serve as primary point of contact for producers and the public
- Prepare and manage Watermaster budgets
- Administer Watermaster contracts (Engineer, Legal, Audit, etc.)
- Prepare Watermaster staff reports
- Prepare, distribute, and post Watermaster meeting materials and public notices
- Maintain contact lists and notice list
- Maintain Watermaster website
- Coordinate attorney input
- Coordinate Advisory Committee input
- Coordinate Subarea Advisory Management Committees input
- Assist Watermaster Landowner Board member elections
- Staff Watermaster meetings
- Prepare meeting minutes
- Administer meeting services and equipment (Audio/Visual, Teleconference, and Video-Conference)
- Maintain liability insurance
- Manage work tasks as directed by Board

- Recommend timelines for tasks
- Process applications for Replacement Wells, Monitoring Wells, and unknown Small Pumper qualifications (where a Material Injury evaluation by the Watermaster Engineer is not required).
- Process annual production reports

1.5.5 Advisory Committee

The Judgment directed Producers to form an Advisory Committee to act in an advisory capacity and make recommendations on all discretionary determinations by the Watermaster Board. The Watermaster Board facilitated the formation of the Advisory Committee, which is formed and functioning, and has provided input into various Watermaster Board decisions. The Advisory Committee consists of 16 members representing a broad range of interests:

- Four from agricultural interests
- One industrial landowner
- One public landowner (County Sanitation Districts Nos. 14 and 20 of Los Angeles County or the City of Los Angeles)
- Two Los Angeles County public water purveyors (currently LCID, QHWD)
- One Kern County public agency (RCSD)
- Two mutual water companies (ideally one each in Los Angeles and Kern counties)
- Two small pumpers
- Two ex-officio members per Judgment (Federal and State), and
- One ex-officio member to provide technical advice.

Advisory Committee meetings are open to the public, noticed on the same webpage as the Watermaster meetings, and held on a regular basis (typically monthly in the week before the Board meeting).

1.5.6 Subarea Advisory Management Committees

The Judgment requires the creation of Subarea Management Advisory Committees. Because the Advisory Committee is actively providing all Parties with a platform for direct participation in Watermaster decision-making, formation of the Subarea Management Advisory Committees was deferred because all Subarea concerns and requests may be raised before the Watermaster Advisory Committee or to the Watermaster Board in accordance with the Judgment and Rules and Regulations. The Watermaster Engineer considers input from the Advisory Committee on any item brought before the Board. In addition, any Party may request formation of the Subarea Management Advisory Committees at any time in the future and without Watermaster approval.

In August 2022, an amendment to the Rules and Regulations regarding Subarea Management Advisory Committees was approved by the Watermaster Board. This amendment allocates time during two regular Advisory Committee meetings per year when Parties can raise and address Subarea-specific concerns with the Watermaster Engineer

present. The first Subarea-specific discussion was held during the Advisory Committee meeting in April 2023. Subsequent meetings have been held during October and April of 2023 and 2024. During these meetings, the Advisory Committee and Watermaster Engineer have discussed the distribution of Production Rights, historical production, and Carry Over water by Subarea, as well as change in storage by Subarea.

1.5.7 Rules and Regulations

The Watermaster Engineer is required by the Judgment to prepare Rules and Regulations for Watermaster approval and proposal to the Court (¶18.4.2). The Rules and Regulations provide procedures and processes for implementation of the Judgment. Development of the Antelope Valley Watermaster Rules and Regulations document was initiated in 2017 and approved at a public hearing on June 24, 2020, pending modifications to one section (Resolution No. R-20-12). Modifications to Section 9 of the Rules and Regulations were approved at a public hearing on July 22, 2020 (Resolution No. R-20-25). The Rules and Regulations document was approved by the Court on September 29, 2020. Modifications for Section 6 of the Rules and Regulations were approved at a public hearing on August 24, 2022 and approved by the Court on October 25, 2022. A copy of the Rules and Regulations is posted on the Watermaster website.

To date, seven additional changes and/or additions to the Rules & Regulations have been approved by the Watermaster Board. Resolutions associated with these changes are listed below.

- R-21-01 Adopting R & R Section 19.j Related to Recovery of Legal Expenses for Unique or Complex Applications [Approved by Court on March 24, 2021]
- R-21-13 Adopting Revisions to Rules and Regulations Section 13.f.ii Relating to Parties' Authority to Submit Transfer Requests [Approved by Court on September 20, 2021]
- R-21-24 Adopting Rules and Regulations Section 14.N Relating to Limits on New Production [Approved by Court on September 20, 2021]
- R-22-52 Amending Rules and Regulations Section 6 Relating to Subarea Management Committees [Approved by Court on October 25, 2022]
- R-23-35 Amending Rules and Regulations Section 14.n.viii relating to limits on New Production [Approved by Court on May 24, 2023]
- R-23-36 Amending Rules and Regulations Section 11.g Relating to Delinquent Replacement Water Assessment Rates [Approved by Court on May 24, 2023]
- R-23-57 Adopting Rules and Regulations Section 14.o Relating to Non-Compliance with New Production Reporting [Approved by court on July 26, 2023]

1.6 WATERMASTER FINANCES

1.6.1 Watermaster Administrative Budgets

The Watermaster Board approved an administrative budget for 2024, which resulted in a $9.50 per acre-foot administrative assessment. The Watermaster 2024 Budget information is summarized as follows.

2024 Administrative Budget Summary

Operating Revenues	$1,280,496
Non-Operating Revenues	$ 108
Operating Expenses	$1,143,389
Change in net position	$ 137,215
Beginning of year	$1,409,318
End of year	$1,546,533

The 2024 Operating Revenue Budget listed above includes 2024 Fixed Assessments and Variable Assessments. The complete audit is in **Appendix K-2**.

- **Fixed Administrative Assessments** are based on each acre foot of a Party's Production Right and are levied at the beginning of the year in which the Production Right occurs[5].
- **Variable Administrative Assessments** are based on either (1) production by a Party in excess of the Production Right or (2) the right to produce Imported Water Return Flows. Administrative assessments on production under (1) above are levied each Spring after total Production is reported for the preceding year; administrative assessments on the right to produce Imported Water Return Flows under (2) above are determined for the current year based on an average of the amounts of imported water used in the five preceding years (¶5.2.2). Variable Administrative Assessments are collected on:
    - each acre foot (AF) of a Party's right to produce Imported Water Return Flows (¶5.2)
    - each acre foot of a Party's production for which a Replacement Water Assessment has been imposed (¶9.2)
    - each acre foot used of a Non-Overlying Production Right holders' allocation of the unused Federal Reserved Water Right (¶9.1)
    - each acre foot during Rampdown of a Party's production in excess of the sum of its Production Right, Imported Water Return Flows, and Production subject to a Replacement Water Assessment.

Appendix K contains detailed Watermaster financial budgets as follows:

[5] In May 2020, Administrative Staff mailed Administrative Assessment invoices to potential Small Pumper parcels. The invoices covered 2016 to 2020 Administrative Assessments based on an average production of 1.2 AFY per existing household or parcel (¶5.1.3).

- **Appendix K-1** contains an approved budget for 2025 as well as 2023 and 2024 budgets.

  The 2024 Administrative Assessment was set at $9.50 per acre-foot, the same as the Administrative Assessment plus the Supplemental Assessment for 2023.

- **Appendix K-2** contains an audit of all revenue and expenditures for 2024.

1.6.2 Replacement Water Assessments

Replacement Water Assessments are charged by the Watermaster to pay for costs incurred to buy and recharge Replacement Water. The purpose of Replacement Water is to ensure that each Party may fully exercise its Production Right by keeping the Basin in hydrologic balance. The Watermaster shall impose a Replacement Water Assessment on any Producer whose production of groundwater is more than the sum of such Producer's rights to pump groundwater including Production Rights, Carry Over water, Imported Water Return Flows, in-lieu production, and Stored water. **Appendix E** lists the Replacement Obligations.

During the first two years of the Rampdown Period (2016 and 2017), Producers were generally not subject to Replacement Water Assessment fees. Exceptions to this include Phelan Pinon Hills Community Services District (PPHCSD) and entities that illegally produced water not under the Judgment. PPHCSD does not have Production Rights, but according to the Judgment, is allowed to pump up to 1,200 AFY from its Well #14 provided such use does not cause Material Injury and PPHCSD pays a Replacement Water Assessment and any other costs deemed necessary to protect Production Rights defined in the Judgment, on all water produced and exported.

The amount of the Replacement Water Assessment due is the sum of excess Production multiplied by the cost to the Watermaster of replacement water, including any Watermaster spreading costs. The Watermaster contracts with the Antelope Valley State Water Contractors Association (AVSWCA) to accomplish the acquisition of Replacement Water and its recharge to the basin. Under that contract, the AVSWCA commits to provide Replacement Water and to recharge that water to the Basin at a defined cost. The Watermaster provides the funds for the Replacement Water and has input into where the recharge will occur. If the Watermaster encounters issues in acquiring imported water, as much water as possible will be purchased. The Watermaster will allocate the imported water for delivery to areas on an equitable and practicable basis pursuant to the Watermaster Rules and Regulations, including when the available amount of imported water is insufficient to fully meet the Replacement Obligations.

The State Water contractors in the Antelope Valley area (AVEK, PWD, and LCID) hired an independent contractor to determine the Replacement Water Assessment fee in areas inside and outside of the State Water Contractor service areas[6] (Raftelis, 2019). The pumpers within the AVSWCA boundaries have helped pay the fixed costs of the State Water Project (SWP) through their property taxes while those outside have not. The replacement

[6] See Appendix I for AVEK service area boundaries and Figure 17 for PWD and LCID service area boundaries.

water costs are based on cost to deliver raw water plus an additional 10 percent to capture the loss of water expected when recharging the imported water supply into the groundwater basin. Pumpers outside of AVSWCA service areas will pay this rate plus a charge to cover their proportional share of SWP fixed costs. Utilizing the same methodology used in prior years, the financial model developed by Raftelis (2019) for AVSWCA is updated annually by the AVSWCA to account for changes in the annual fixed costs and deliveries as updated in the Department of Water Resources' annual Bulletin 132 and changes to the AVEK's untreated water delivery charge.

The following list summarizes the 2016 through 2025 Replacement Water Assessment rates for both inside and outside of the AVSWCA boundaries.

Calendar Year	Inside AVSWCA Boundaries	Outside AVSWCA Boundaries
2016	$415/AF	$888/AF
2017	$415/AF	$896/AF
2018	$415/AF	$914/AF
2019	$451/AF	$948/AF
2020	$486/AF	$989/AF
2021	$498/AF	$1,010/AF
2022	$523/AF	$1,055/AF
2023	$563/AF	$1,118/AF
2024	$607/AF	$1,190/AF
2025	$636/AF	$1,224/AF

Imported water can be purchased from AVEK, PWD, LCID, or other entities and recharged to make up any Replacement Obligations.

In December 2024, the Watermaster provided $182,423.92 of Replacement Water Assessment fees to AVWSWCA for the replenishment of 310.98 AF of water for excess production occurring between 2016 and 2023. AVSWCA staff conferred with the General Managers of their representative member agencies to determine the agencies and facilities that would be responsible for the replacement water. They determined that AVEK would be responsible 281.63 AF of replacement water, PWD would be responsible for 29.18 AF, and LCID would be responsible for 0.17 AF. Every agency chose to have the replacement water deducted from water already stored at their recharge sites. The Watermaster also reviewed and finalized these recharge amounts and locations in January 2025. These deductions are shown in **Appendix C**.

2 WATERMASTER ACTIVITIES IN 2024

In this ninth year of implementation, the Watermaster Board continues to actively administer the Judgment and Physical Solution. The Board held ten regular Board meetings and two special Board meetings (one special meeting was a combined November and December meeting and the other was to appoint an interim administrator) in 2024. Board meetings were generally preceded by an Advisory Committee meeting the previous week; the Advisory Committee produced a memorandum to the Board advising it on items identified for each upcoming Board meeting. In 2024, the Board considered and unanimously approved 59 resolutions (available on Watermaster website; no resolutions no. 8 or 25) as listed below:

- R-24-01 Approving 2024 Application Fee Schedule
- R-24-02 Authorizing Specified Individuals to Transact Business with Citizen Bank (Signatures)
- R-24-03 Approving New Production Application Avalos, Irma
- R-24-04 Approving New Production Application Orantes, Pedro
- R-24-05 Approving New Production, Martin Torress and Blanca Vazquez
- R-24-06 Approving Transfer Request (WDS II CA – AVEK 1,000 AF Carry Over)
- R-24-07 Approving Replacement Well Application Moffett, Mary E
- R-24-09 Approving 2024 Replacement Water Assessment Rate
- R-24-10 Approving Transfer Application, AV Country Club to Sonrise Ranch, 51.44 AF One-time
- R-24-11 Approving Transfer Application, Gorrindo to RTS Orchards, 629 AF One-time
- R-24-12 Approving Transfer Application, S Selak to RTS Orchards, 65 AF One-time
- R-24-13 Approving Transfer Application, R Selak to RTS Orchards, 65 AF One-time
- R-24-14 Approved Transfer Application, Lane to Vulcan, 400 AF One-time
- R-24-15 Approving New Production Application, Balough, Andras
- R-24-16 Approving Non Production Application, Mission Linen Supply
- R-24-17 Approving New Production Application, Jesus Rio Moreno
- R-24-18 Approving Transfer Request, Nebeker to Long Valley 190.16 AF One-time
- R-24-19 Approving Transfer Request, Selek's to 40th St East Water Group 10 AF each One-time
- R-24-20 Approving Transfer Request, Craig Van Dam to California Compaction 1 AF Perm and 30 AF One-time
- R-24-21 Approved Non-Production Application, USAF (Pending payment of invoice)
- R-24-22 Approving New Production Application, Lizet Meza
- R-24-23 Approving Transfer Request, Maritorena to Mettler Valley 4 AF One-time
- R-24-24 Approving Transfer Request, County San District 14 to City of Lancaster, 50 AF Perm
- R-24-26 Approving New Point of Extraction (40AA Water)
- R-24-27 Approving Transfer Request V Lions to AVEK 10,000 AF Temp
- R-24-28 Approving Transfer Request PWD to LCID 580 AF Temp
- R-24-29 Approving New Production (Arana)
- R-24-30 Tabled 6/26/24 and 7/24/24 – Approving Transfer Request 50th District Ag to City of Lancaster 52 AFY Perm
- R-24-31 Approving Transfer Application AV Mobile Estates to AV Mobile Home Park 8.75 AFY Perm

- R-24-32 Approving Transfer Application Pam Godde to Robertson Ready Mix, 150AF Temp
- R-24-33 Approving New Point of Extraction Application – Ludwig Farms
- R-24-34 Approving New Production Application (Rodriguez)
- R-24-35 Approving the 2023 Annual Report
- R-24-36 Approving Transfer Application Steve Godde to Robertson Ready Mix, 150 AF Temp
- R-24-37 Approving New Production Application, Bell
- R-24-38 Approving New Point of Extraction, City of Lancaster
- R-24-39 Approving Transfer Application, AVEK to LACWWD 2,598.29 AF Temp
- R-24-40 Approving Transfer Application, AVEK to LCID 100 AF Temp
- R-24-41 Approving Transfer Application, Pam Godde to WVCWD, 50 AF Temp
- R-24-42 Approving Transfer Application, Steve Godde to WVCWD, 50 AF Temp
- R-24-43 Approving New Production Application, Castaneda
- R-24-44 Approving New Production Application, Juarez
- R-24-45 Approving New Production Application, Villareal
- R-24-46 Approving Monitoring Well, Copart
- R-24-47 Approving Transfer Application, Calandri to Gene Wheeler Farms 728 AF Temp
- R-24-48 Approving Transfer Application, Tivoli to AV Water Trust 300 AF Temp
- R-24-49 Approving New Production, Nguyen
- R-24-50 Approving New Point of Extraction Well, Petrie
- R-24-51 Approving Monitoring Well, Waste Management
- R-24-52 Approving Replacement Well, Minter
- R-24-53 Approving New Production Application, Eastside Union School District
- R-24-54 Approving Budget and Administrative Assessment for CY 2025
- R-24-55 Approving Replacement Water Assessment Rate for CY 2025
- R-24-56 Approving New Production Application, Lutzker
- R-24-57 Approving New Production Application, Romero
- R-24-58 Approving New Production Application, Whitted
- R-24-59 Approving Transfer, Sahara to Silvestre (22 AF Perm)
- R-24-60 Approving Transfer, Van Dam to Calandri Farms (86.5 AF Perm)
- R-24-61 Approving Transfer, Van Dam to California Compaction (80 AF Perm)

Notable actions taken by the Board in 2024 are highlighted below:

- Adopted a fee schedule and RWA rates for 2024.
- Accepted and filed the 2023 Financial Audit.
- Approved and submitted the 2023 Annual Report to the Court.
- Complied with the Sustainable Groundwater Management Act (SGMA) reporting requirements for adjudicated basins.
- Renewed contract for Todd Groundwater as Watermaster Engineer for 2025-2027.
- Approved 2025 RWAs and 2025 budget.

The Judgment requires the Watermaster to annually certify a list of unpaid delinquent assessments. Administrative staff regularly provide the Watermaster with a list of

outstanding assessments as part of their financial report in each Board packet. Current lists of delinquent assessments (Administrative, Variable, and Replacement) and delinquent annual production reporting (where such reporting may be required to determine the amounts to be assessed) are included in **Appendix M**.

Notice List. The Judgment requires the Watermaster to maintain a current list of Parties to receive notices on Watermaster activities. The Parties have an obligation to provide the Watermaster with their current contact information. The current Notice List is in **Appendix L**. **Appendix L** contains a current list of Producers and a current list of known Small Pumpers. These lists will be updated and refined as appropriate. The Watermaster's website (www.avwatermaster.net) will also be used to notify interested parties of Watermaster activities.

Measuring Devices. In 2017, the Watermaster developed requirements for meter installing, testing, and reporting. These requirements were approved by the Court by order dated November 28, 2017 and are in the Rules and Regulations document adopted in 2020. By March 1, 2018, all Parties other than the Small Pumper Class were required to install meters on their wells for monitoring production and submit proof thereof to the Watermaster. The Watermaster requested and was granted an extension to the meter installation date from January 1, 2018 to March 1, 2018 to allow time for all producing Parties to comply with the requirements. Additional information is provided in **Section 3.9.1** of this report.

Meter installations are also required for any member of the Non-Pumper Class who has complied with the New Production Application Procedure specified in ¶18.5.13 of the Judgment. As provided in the Judgment, Producing Non-Pumper Class members shall report production to the Watermaster, and prior to the commencement of production, shall install a meter consistent with the requirement of the Rules and Regulations (¶9.2.2).

Rules and Regulations. The Rules and Regulations were developed in stages in order to obtain early court approval of those sections requiring early deadlines in the Judgment such as metering requirements. These sections were compiled with additional sections and approved by the Watermaster Board on June 24, 2020 and July 22, 2020 (Section 9). The complete Rules and Regulations (R&Rs) is available on the Watermaster website (www.avwatermaster.net). Seven revisions to the R&Rs have been approved (see Section 1.5.7).

Forms. Forms have been developed for reporting annual production and monthly meter readings; requests for information; Small Pumper qualifying documentation; requests for replacement wells, new point of extraction wells, use of a Production Right at a new location (no new well), non-production wells, and new production; request for transfers; requests to be added or removed from the Transfer Bulletin Board; and annual water storage and recovery reporting. There are also forms related to Storage and Storage Agreements. These forms are updated from time to time when new issues arise or a need for additional information is identified. Original and updated forms are reviewed and approved by the Watermaster Board. Forms are listed in **Appendix N** and available on the Watermaster website.

Prior Year's Report. As provided in the Judgment, Annual Reports should also include the Annual Report from the prior year. To streamline this 2024 Annual Report, the 2023 Annual Report has been posted on the Watermaster website for easy downloading and reference (www.avwatermaster.net).

3 MONITORING OF SAFE YIELD COMPONENTS

As required by the Judgment, monitoring data have been compiled for the safe yield components in the Adjudication Area. The monitoring program established for the basin includes data compilation for climate and streamflow, groundwater levels, groundwater quality, land subsidence, managed aquifer recharge (i.e., groundwater banking), amounts and use of imported water, groundwater production, and return flows. Groundwater levels are used to analyze annual changes in groundwater volume. Some data sets represent components of the Safe Yield calculation that can be monitored directly while other data sets support analyses to estimate components or check the reasonableness of components.

In addition to the data compiled for this 2024 Annual Report, the Watermaster Engineer has continued compiling historical hydrologic and hydrogeologic information regarding the safe yield components for the Watermaster. This hydrologic and hydrogeologic database supplements the water accounting spreadsheets and database developed by the Watermaster Engineer for the purposes of tracking production categories and other requirements of the Judgment. More detailed analyses of safe yield components will occur in future annual reports as funding is available.

3.1 GROUNDWATER BASIN AND ADJUDICATION AREA

The Antelope Valley Groundwater Basin underlies an alluvial valley with ground surface elevations ranging from 2,300 to 3,500 feet above mean sea level (msl). The basin is surrounded on the southwest and northwest by the San Gabriel Mountains and the Tehachapi Mountains, respectively, and on the southeast by a series of low ridges, buttes, and hills.

The southwest and northwest boundaries are controlled by two major geologic fault systems – the San Andreas fault at the base of the San Gabriel Mountains and the Garlock fault at the base of the Tehachapi Mountains. The northern boundary is defined by the contact of alluvial deposits with bedrock. An approximate five-mile section of the northern boundary abuts the alluvial deposits of the Fremont Valley (**Figure 1**) and is separated by a groundwater divide. To the east, an additional groundwater divide – generally located along the San Bernardino County line – has been used to separate the Antelope Valley from the El Mirage Valley and the Mojave adjudicated area. The Antelope Valley Adjudication Area, as defined by the Court, is slightly smaller than the groundwater basin (compare the shaded blue groundwater basin with the Adjudication Area on **Figure 1**).

Prior to development, groundwater flowed from the surrounding uplands toward natural surface depressions at ephemeral lake beds in the north (Rosamond Lake) and northeast (Rogers Lake). These natural flow directions have been re-directed locally toward pumping wells.

The basin has a long tradition of agricultural use dating back to the late 1800s. As both agriculture and urban land use increased during the post-World War II era, groundwater

provided about 90 percent of the overall supply. Reliance on groundwater decreased somewhat in the 1970s and 1980s after imported water was available in the basin. However, urban growth, an increase in irrigated acreage, and limitations on availability of imported water resulted in increases in pumping during the 1990s. In 2011, the Court ruled that the basin was in overdraft and required a physical solution to bring the basin into balance.

The physical solution in the Judgment establishes a safe yield for groundwater production and an allocation of that safe yield among basin producers. Two estimates of safe yield are provided in the Judgement:

- Native Safe Yield: 82,300 AFY
  Includes estimates of natural recharge plus return flows from groundwater use, percolation from wastewater, and conveyance system losses
- Total Safe Yield: 110,000 AFY
  Is the sum of Native Safe Yield plus the Imported Water Return Flows.

Native Safe Yield, set by the Court at 82,300 AFY, is based on estimates of natural groundwater recharge from the hydrologic system including subsurface inflows from the surrounding bedrock (referred to as mountain front recharge) and infiltration from precipitation and streamflow. Native Safe Yield also accounts for return flows from basin pumping (described below). As shown on **Figure 2**, the Native Safe Yield is the amount allocated among most of the basin producers. Recognizing that the importation of supplemental surface water adds to the safe yield, a Total Safe Yield of 110,000 AFY was set by the Court, based on average estimates of available imported water and the associated return flows. Allocations of return flows from imported water are assigned to certain Parties listed in the Judgment.

To provide context for data needed to monitor safe yield components, a summary of the Judgment's safe yield calculation is provided in the following sections. The details of the safe yield determination are documented in the Phase 3 Summary Expert Report (Beeby, et al., 2010)[7].

3.2 SAFE YIELD DETERMINATION IN THE JUDGMENT

The process to develop a safe yield for the Adjudication Area of the groundwater basin involved years of detailed hydrogeologic analyses by numerous technical experts representing various parties in the litigation. The analyses included delineation of basin boundaries, descriptions of the geologic and hydrogeologic setting, evaluation of aquifers and aquitards, examination of water levels, assessment of groundwater occurrence and flow, and detailed accounting of the water budget, including inflows and outflows from the

[7] This report was prepared in association with Phase 3 of the trial. It is recognized that there were multiple phases that are not discussed herein; the Phase 3 Expert Report contains the most relevant information for summarizing the Safe Yield determination in the Judgment.

groundwater system and change in groundwater volume. These analyses culminated in a Summary Expert Report, published in July 2010 (Beeby, et al., 2010).

3.2.1 Natural Groundwater Recharge

Estimates of natural recharge to the groundwater basin developed by technical experts during litigation were used as the foundation of the safe yield determination. For the purposes of this discussion, the use of *natural recharge* refers to recharge associated with the natural hydrologic environment such as precipitation and streamflow. It specifically excludes the concept of return flows associated with groundwater pumping or use of imported water.

It is recognized that the amount of natural recharge does not always equate to the amount of groundwater that can be pumped sustainably from a basin because it is difficult to capture all of the replenished water without losing a significant amount to natural groundwater discharge (e.g., subsurface outflow from a basin). For the Antelope Valley, groundwater discharge to the dry lakes appears to be minimal and to occur only during wet periods. Subsurface outflow is uncertain but likely occurs along limited segments of the basin boundary. Therefore, estimates of natural recharge were determined to be sufficient as a first approximation of the average annual amount of groundwater that could be used sustainably.

The natural groundwater recharge components were estimated by the technical experts during litigation using two separate methods:

1. a tabular mass balance (referred to as a water balance) approach, which accounted for each inflow and outflow associated with the groundwater system independently, while conserving the mass from the hydrologic cycle, and

2. estimates for changes of groundwater volume over time – developed through a comparison of groundwater elevation contour maps – and then using pumping estimates to solve for inflow (natural recharge). These two methods and results are described below.

3.2.1.1 Natural Groundwater Recharge using a Mass Balance Method

A mass balance approach to the water budget for the basin involves tracking of water into (inflows) and out of (outflows) the groundwater basin. This water tracking is illustrated by a schematic diagram on **Figure 3** (modified from Beeby, et al., 2010). The diagram represents the physical system of the groundwater basin and surrounding watershed. The mountains or uplands that surround the groundwater basin are represented on the left side of **Figure 3**; the playas (dry lakes) that represent a natural discharge area of the groundwater basin are shown on the right. Annual average flows estimated in the 2010 analyses are shown on the diagram in AFY for illustration purposes. In general, groundwater flows from the upland areas toward the dry lakes.

Precipitation provides the primary water source for the basin, including rainfall and snowmelt in the surrounding uplands and rainfall on the valley floor. In the uplands, rainfall either leaves the system through evapotranspiration (ET), runs off the surface into stream channels, or infiltrates into the fractured bedrock (upper left area of **Figure 3**). Some of the infiltrated water discharges back to the stream channels as baseflow; the remaining amount is available for subsurface groundwater recharge, also referred to as mountain front recharge. The 2010 analysis by the technical experts during litigation estimated this amount at about 19,800 AFY, as shown on **Figure 3.**

As mountain streams reach the valley floor, most of the water infiltrates into the permeable alluvium and serves as groundwater recharge (see the mass balance for stream channels on **Figure 3**). This component is considered the largest source of groundwater recharge with estimates of about 30,000 to 40,000 AFY (shown as an average of 36,600 AFY in the mass balance on **Figure 3**). The water budget also recognizes that a small amount of streamflow is diverted for use prior to infiltration. During wet years, flood flows reach the playas, where water pools and evaporates. Some of the flood water may infiltrate the surficial deposits, but the low permeability of the lakebed sediments restricts deep percolation and groundwater recharge. When groundwater levels are high, small amounts of groundwater can also discharge to the playas.

Given the desert climate of the area, rainfall volumes on the groundwater basin floor are small, with most of the area receiving less than eight inches per year on average. Given the corresponding high rates of ET in the basin, most of this rainfall evaporates quickly, limiting the available water for infiltration into the basin sediments. The 2010 analyses concluded that groundwater recharge from soil infiltration does not likely occur in basin areas with an average annual rainfall of less than eight inches (Beeby, et al., 2010); that conclusion is supported by numerous technical studies on groundwater recharge in desert basins. While minor recharge occurs from direct precipitation in localized alluvial fan deposits along the northwestern rim of the basin (western edge of the West Antelope Subarea, see **Figure 1**), the overall mass balance indicates that groundwater recharge from direct precipitation is small; as such, it is not quantified on **Figure 3**.

In summary, the two primary sources of natural recharge were determined by the technical experts during litigation to be mountain-front recharge (about 19,800 AFY on **Figure 3**) and infiltration from streamflow (about 36,600 AFY on **Figure 3)**, resulting in a total estimated natural recharge of about 56,400 AFY.

3.2.1.2 Natural Groundwater Recharge using a Change in Groundwater Volume Method

The estimates for groundwater recharge above were checked for reasonableness by the technical experts during litigation through a separate groundwater level analysis involving the change in groundwater volume over time. This method involved preparation of nine groundwater elevation contour maps for nine years spanning a 59-year period from 1951 through 2009 (study period). These maps were used to assess water level changes (rise or declines) during eight specific time intervals and over the entire study period. Water level

surfaces at the beginning and end of each period were electronically subtracted to estimate changes over the entire basin for each period (Beeby, et al., 2010).

In order to relate the water level changes to a volume of groundwater gain or loss, aquifer storage properties were developed based on a texture analysis (e.g., percentages of sand, gravel, silt, and clay) from geologic logs. Texture categories were assigned a storage property, referred to as specific yield (Sy). Sy is defined as the ratio of the volume of water that will drain under gravity compared to a unit volume of the aquifer (expressed as a percentage) and is used to estimate the volume of water released from storage for a unit change in head. Because Sy varies throughout the aquifer system, the method assigned a Sy that corresponded to the areal location and the vertical interval of the aquifer where water levels had changed. This analysis provided the Basin-wide change of groundwater volume for various time intervals.

The change in groundwater volume was applied to the water balance equation as shown below:

Change in Groundwater volume = Inflows (recharge) - Outflows

Because outflows consisted primarily of groundwater pumping, investigators estimated pumping (less return flows) for the same time intervals as the contour map analysis. With estimates for both Outflows and Change in Groundwater Volume, the equation above could be re-arranged to solve for inflows (natural recharge). The change in volume method indicated average annual natural recharge between 55,000 to 58,000 AFY, results very similar to the results of the mass balance analysis described above (56,400 AFY). Recognizing uncertainty in the analysis, a natural groundwater recharge of 60,000 AFY was selected by the technical experts during litigation for the purposes of the safe yield analysis (Beeby, et al., 2010).

3.2.2 Native Safe Yield

Safe yield is defined in the Judgment as "the amount of annual extractions…over time equal to the amount of water needed to recharge…groundwater…and maintain it in equilibrium..." Because safe yield is defined in terms of groundwater extraction, the efficiency of groundwater use requires consideration.

All groundwater pumped from a well may not be consumed; if unused water is allowed to percolate back into the groundwater basin, that amount is referred to as *return flow*s. Because it is difficult for irrigation systems to be 100 percent efficient, return flows result from almost all irrigation applications including agricultural, municipal (e.g., landscaping, parks), and domestic (e.g., lawns). In addition to irrigation, other water use practices can result in return flows including conveyance system losses, percolation of wastewater, or septic systems. The conceptual diagram of safe yield components (Figure 4[8]) illustrates the

[8] As noted on Figure 4, the diagram was developed to illustrate the concepts of safe yield and does not depict the complexity of the multi-aquifer system of the Antelope Valley Groundwater Basin.

various groundwater uses and associated return flows. The amount of return flows varies with irrigation method, type of losses, soil properties, evapotranspiration, and other factors.

Because these return flows offset the amount of groundwater production in the basin, the amount of sustainable production from the Antelope Valley Groundwater Basin can be higher than the 60,000 AFY estimate for natural recharge. For example, if 25 percent of pumping actually returns to the groundwater system as return flows (indicating that 75 percent of groundwater production is consumed through evaporation, crop transpiration, or human consumption), then a safe yield of 80,000 AFY would allow for consumption of the 60,000 AFY of recharge and 20,000 AFY of return flows (60,000/0.75 = 80,000).

Using a mix of historical and recent land use practices, the Summary Expert Report evaluated various return flow estimates for the purposes of developing a sustainable yield (Native Safe Yield) for the Basin. Given the mix of land use practices observed over a recent 15-year period, an overall return flow of about 27.1 percent[9] was estimated to be reasonable. Applying this to the 60,000 AFY estimate for natural recharge, a Native Safe Yield of 82,300 AFY was derived. As shown on **Figure 2**, this value was used for the total Production Right in the Basin. The Judgment prohibits the Watermaster Engineer from recommending a change to the Native Safe Yield ten years before the Year 17 of the Judgment.

3.2.3 Total Safe Yield

Total Safe Yield is defined in the Judgment as the amount of groundwater that may be safely pumped from the Basin on a long-term basis and is specified as the sum of the Native Safe Yield plus return flows from imported water (¶3.5.51 of the Judgment). Beginning in the 1970s, supplemental surface water supplies were imported into the Basin from the SWP. This supplemental water decreased the reliance on groundwater supply and provided water to meet the growing demand of the valley. Depending on use, the SWP water also provides an additional component of groundwater recharge through return flows, increasing the overall safe yield for the Basin. This amount varies substantially with the availability and use of imported water.

In order to consider this supplemental supply in the adjudication, the team of technical experts during litigation evaluated amounts of imported water and its use over time. This analysis led the team to conclude that return flows from imported water resulted in about 27,700 AFY of additional groundwater supply to the Basin. Adding to the Native Safe Yield of 82,300 AFY, this amount provided a Total Safe Yield of 110,000 AFY.

[9] This groundwater return flow *percentage* is different from the Imported Water Return Flow percentages specified in the Judgment. Imported Water Return Flows represent a new water source in the basin and increase groundwater availability. Imported water return flows are also associated with a different land use mix (i.e., more imported water is used for municipal purposes, a use associated with a larger *percentage* of return flows compared to agricultural use).

Credits for imported water return flows are assigned in the Judgment according to use (see **Section 5.4** for a description of these credits). Some imported water may be delivered to a recharge facility (e.g., a spreading basin) and recharged directly into the groundwater basin for subsequent recovery and use; such a recharge facility is illustrated conceptually on **Figure 4**. When imported water is recharged directly, there are no "return flows" as defined by the Judgment; return flows occur only after imported water is used directly in the Basin.

The technical analysis in 2010 recognized that safe yield is not necessarily a constant value and can change over time with varying land use and water management practices. As described above, the Native Safe Yield has embedded assumptions of land use and return flows. The Total Safe Yield will change based on average amounts of imported water available to the Basin over time. The Judgment allows the Watermaster Engineer to initiate recommendations to change both the Native Safe Yield and the return flows from imported water ten years after the seven-year Rampdown Period (Year 17 after entry of the Judgment in December 2015).

3.3 CLIMATE DATA

Precipitation in the Antelope Valley watershed is the primary source of natural groundwater recharge and controls the location and pathways of natural recharge in the Basin. Average annual precipitation across the Antelope Valley watershed, calculated during the adjudication process, ranges from 4 inches to 47 inches with an area-weighted average of 8.3 inches per year (Beeby et al., 2010). Upland areas within the watershed but outside of the Adjudication Area account for most of the precipitation available for recharge. Area-weighted average precipitation amounts in the upland watershed are listed below:

- San Gabriel Mountains – 15.4 inches per year
- Tehachapi Mountains – 13.1 inches per year
- Eastern buttes – 8.7 inches per year
- Northern buttes – 9.2 inches per year

Average annual precipitation on the valley floor is typically less than 8 inches per year. Most Subareas have an average annual precipitation rate less than about 5 inches per year.

For the original 2010 analyses, precipitation data for 23 stations covering a 57-year period (1949-2005) were compiled and analyzed. A portion of these data sets has been compiled for Watermaster files, with an emphasis on active state- or federal-operated weather stations. Data were also obtained from additional stations with recent data to support analyses in this Annual Report (Calendar Year 2024). Many of these stations also provide other climate information such as reference ET (ET_o) and temperature.

Precipitation (and other climate) data for the Antelope Valley Adjudication Area and surrounding watershed are available from the following primary sources: Los Angeles County, California Irrigation Management Information System (CIMIS), and National Weather Service cooperative stations (data available through the Desert Research Institute -

DRI). The monitoring centers have been confirmed to be active in 32 stations (as of April 9, 2025 or the most recent data available). **Table 3** provides station summary information; station locations are shown on **Figure 5.**

Precipitation data for 2024 are used to determine whether the year was wet, dry or average compared to long-term data. A graph of cumulative monthly 2024 precipitation was compared to similar curves for representative wet, average and dry conditions, using data from the Palmdale station (DRI, #46624). These data are shown graphically in the top chart on **Figure 6**; the general location of the Palmdale Station is indicated on **Figure 5**.

Current - Operational as of April 27, 2024

Figure 6 documents precipitation in the Antelope Valley area of the Basin. The top portion shows cumulative precipitation through the months of the year for dry, average, and wet years plus 2024. As indicated, average annual precipitation is about 7.0 inches per year (e.g., 2001, a representative average year). Annual precipitation ranges from about 15.4 inches per year in a wet year (1983) to below 3 inches per year, with 2.9 inches per year (2012) used as a representative dry year. While other years may have been slightly drier, this year has good quality available data. The 2024 annual precipitation was 7.16 inches, slightly above normal rainfall.

The 2024 monthly precipitation at the Palmdale DRI station, along with average monthly precipitation at this station, is shown on the bar graph on the bottom of **Figure 6**. This chart has been extended through March 2025 for purposes of the discussion of groundwater levels, presented in **Section 4.5.** As shown on **Figure 13**, no rainfall occurred at the Palmdale station from May through December. However, higher than average precipitation during January through April caused the cumulative 2024 rainfall to be near the annual average rainfall rate.

3.4 STREAMFLOW DATA

As described above, runoff from the surrounding watershed provides significant groundwater recharge to the Basin (see **Figure 3**). Streams originate in the uplands and flow out onto the valley floor, where most of the water infiltrates into the basin sediments (as illustrated conceptually on **Figure 4**). The most hydrologically significant streams include drainages in the San Gabriel and the Tehachapi mountains, as listed below (Antelope Valley IRWMP, 2013):

- San Gabriel Mountains
    - Big Rock Creek
    - Little Rock Creek
    - Amargosa Creek
- Tehachapi Mountains
    - Oak Creek
    - Cottonwood Creek

The 2010 analyses compiled streamflow data from 18 stations spanning a 61-year period (1949-2009). These data were supplemented with characteristics of channel geometry at gaged and ungauged sites to allow for a more comprehensive assessment of runoff. Almost all historical data from these stations have been downloaded to supplement the Watermaster Engineer data files, but only five of these stations remain active. **Table 4** provides summary information for 24 streamflow stations, including most of the 18 stations used in the litigation, additional stations with available data, and three one-time measuring stations; the active stations provide data through May 12, 2025 (indicated as ‘current’ in the last column of **Table 4**). Locations of these streamflow stations are shown on **Figure 5** (a few closely positioned stations appear as one location on the map).

Current - Operational as of May 12, 2025

As shown in **Table 4**, discharge volumes are available for 19 streams (including tributaries to primary streams) at 24 gaging stations in the Adjudication Area and surrounding watershed. Also included in **Table 4** are three one-time measurement sites on Amargosa Creek, where the U.S. Geological Survey (USGS) documented infiltration rates for a potential enhanced recharge project for the City of Palmdale (see first three sites in **Table 4**).

Little Rock Creek contains an upstream reservoir, Littlerock Reservoir, jointly owned by PWD and LCID. As shown in **Table 4**, natural inflows are monitored by gage station ID 10264000. PWD maintains records of the discharge and diverts water from the reservoir. In 2024, PWD diverted 5,157.5 AF.

Previously, USGS monitored stream gage stations listed in **Table 4** and published data on the USGS National Water Information System (NWIS). Currently, USGS monitors only one station (Big Rock C Near Valyermo Ca). Los Angeles County now monitors four of the former USGS stations including Big Rock Creek, Little Rock Creek, Pallett Creek, and Santiago Canyon Creek (**Table 4**).

Although data are limited with respect to the number of streams being actively monitored, data from Big Rock Creek and Little Rock Creek provide consistent, long-term data for analysis. Streamflow on Big Rock Creek averaged 18.4 cubic feet per second (cfs) over the 1988 through 2024 time period. Average streamflow on Big Rock Creek in 2024 was 75.54 cfs, well above average. Above-average flows occurred throughout much of the year. In addition, previous work by USGS for the City of Palmdale provides some measured infiltration rates along Amargosa Creek to assist with future estimates of groundwater recharge.

In 2024, AVSWCA began exploring the feasibility of installing and maintaining additional stream gage stations with state funding.

3.5 GROUNDWATER LEVELS

Groundwater levels are monitored and analyzed to produce hydrographs (see **Figure 7**); monitored well locations are shown on **Figure 8**. Groundwater level data are also used to prepare groundwater elevation contour maps (**Figures 9, 10, and 11**).

USGS currently monitors water levels in approximately 145 wells within and adjacent to the Antelope Valley Adjudication Area. Wells in recent USGS monitoring programs are shown on **Figure 8**. The number of wells in this regional monitoring program varies from year to year based, in part, on access and well status/operation. Water level monitoring occurs in Spring, typically March, and a smaller subset of these wells is measured in the late Summer to Fall of each year. The network contains relatively good coverage for each of the Management Subareas (**Figure 8**). Although data are sparse in the Willow Springs and Rogers Lake Subareas, groundwater production only occurs in a few wells in those areas (see also **Figure 18** – discussed in subsequent sections of this report). The network also contains wells in alluvial areas adjacent to the Adjudication Area including Fremont Valley and north of the Rogers Lake Subarea, if needed.

The USGS monitoring program was developed, in part, to comply with the California Statewide Groundwater Elevation Monitoring (CASGEM) program for the groundwater basin. This program was developed by the Antelope Valley State Water Contractors Association (District 40, 2014[10]); program costs were previously shared by AVEK, LCID, and PWD, with additional funding from USGS. Recognizing its benefits for the safe yield component monitoring, the Antelope Valley Watermaster has agreed to support 25 percent of the total monitoring program costs and has provided about $15,000 to $18,000 per year to the program since 2017. AVSWC contributes 50 percent of the funding to support the monitoring program and the Antelope Valley Regional Water Management Group contributes the remaining 25 percent. In 2025, the Watermaster approved expenditure of $19,155 to support this program from October 2024 through September 2025.

Most of the wells in the monitoring program are production wells rather than dedicated monitoring wells. USGS has implemented monitoring protocols to avoid inaccurate water levels measurements that may be affected by recent pumping. To supplement these data, the Watermaster Engineer has been identifying and requesting data from monitoring wells owned by others in the Basin to incorporate into the program. This process includes any new monitoring well applications approved by Watermaster Staff in the Basin, which require well owners to provide monitoring data to the Antelope Valley Watermaster. In addition, water level data from monitoring and/or production wells have been provided to the Watermaster Engineer by many of the public water suppliers, imported water suppliers, and mutual water companies in support of the Annual Report analyses.

3.5.1 Water Level Trends and Fluctuations

To examine water level changes over time, hydrographs have been prepared for wells with relatively long records in the Watermaster Engineer database. Working hydrographs were initially developed for more than 5,000 wells with elevation data and reviewed to identify representative wells for water level tracking. A quantitative approach was developed in 2019 for hydrograph selection based on the number and duration of water level measurements, local trends and fluctuations, and the spatial distribution of hydrographs throughout the Basin. Specifically, each hydrograph in the program was rated using a simplified point system (low-5 points, medium-10 points, or high-15 points) for the following criteria:

- ***Ongoing/Recent monitoring*** – Wells that are part of the current USGS monitoring network or have recent data were prioritized. If a well had recent data from 2018 or 2019, it was scored high; wells with the most recent data occurring in 2010 to 2017 were scored medium; all other wells were scored low for this criterion.
- ***Historical monitoring*** – Wells were evaluated for the length of the monitoring record by prioritizing wells that provide sufficient data to compare water level trends over the last few decades. Wells with data extending back to 1973 were

[10] District 40 prepared the CASGEM Monitoring Plan for the Antelope Valley State Water Contractors Association on file with DWR.

given a high rating; wells with data only in the last five years were rated low with records in between scored medium.

- ***Number of measurements*** – Each hydrograph was assessed for continuity of monitoring to better evaluate local fluctuations in the Basin. Wells with greater than 50 measurements were scored high, greater than 25 and 15 records were medium and low respectively. Wells with less than 15 measurements were not scored.
- ***Location*** – Wells were prioritized for broad distribution across the Basin, distribution in each Subarea, and availability of other wells nearby. Wells were scored based on a high score for unique locations and a low score for numerous wells in clusters.
- ***Trends*** – Finally, each hydrograph was assessed on a qualitative basis for continuity of monitoring, representation of local or regional trends, and presence of outliers or unrealistic/questionable data. Wells demonstrating representative trends with consistent data were scored high, wells with representative trends but without consistent monitoring were scored medium, and remaining wells were scored low.

Hydrographs for the 17 top scoring wells (60 points and higher) are shown on **Figure 7**. For wells with similar trends and data, one from each trend group was selected for display. Accordingly, the selected wells are judged to adequately represent the range of local groundwater conditions across the Basin. Backup hydrographs are available for local specific analyses as needed. Available data are displayed on **Figure 7** hydrographs from 1997 through Spring 2025 representing about 27 years of groundwater elevations. Although groundwater elevations vary across the Basin, all vertical scales on the hydrographs cover 100 feet to facilitate comparison of water level trends and fluctuations.

As shown on **Figure 7**, most wells indicate an overall declining trend of varying magnitudes during the 28-year period including at least one well in each Basin Subarea (e.g., hydrographs shown clockwise by USGS_501, USGS_4301, USGS_3501, USGS_5001, USGS_2001, USGS_2901, USGS_31001, USGS_45101, USGS_4801, USGS_5201, USGS_44001, and USGS_101). However, for most of the wells with overall declining trends, water levels have either stabilized or the rates of decline have decreased in recent years. In general, declines are smaller in the northern portions of the Basin (e.g., USGS_4301, USGS_3501, USGS_5001, and USGS_2001) and other areas with lower amounts of pumping. The largest decline is indicated in the east-central portion of the Central Antelope Valley Subarea where one hydrograph indicates an overall decline of about 60 feet (USGS_5201); yet even in that well, water levels appear to have partially recovered in recent years. In addition, two representative hydrographs indicate areas where water levels have risen (USGS_1101, USGS_75101 USGS_4401), including one well near a groundwater banking project. Wells with semi-annual data indicate seasonable fluctuations (Spring to Fall) of a few feet to more than 10 feet.

With the hydrologic imprint of climate and imported water availability, along with the development of additional groundwater banking projects, it is difficult to directly relate improvements in water level trends to Rampdown. Nonetheless, most areas of the Basin appear to have either stable or improving groundwater conditions since the 2015 Judgment.

3.5.2 Groundwater Elevation Contour Maps

To further examine groundwater conditions for the 2024 Annual Report, two Basin-wide groundwater elevation contour maps have been prepared for Spring 2024 and Spring 2025, with most data measured in March representing seasonal high water levels. These time periods were selected based on the large amount of available data and the ability to analyze changes in groundwater levels over a one-year period. In addition, Spring measurements are less likely than Fall measurements to be affected by recent heavy pumping, which is typically associated with the summer irrigation season[11]. By developing these two maps one year apart, a change in groundwater volume can be approximated for most of calendar year 2024, the period covered in this Annual Report. This approach has been employed in all previous Antelope Valley Watermaster annual reports, providing a consistent methodology for comparison purposes. Only wells measured during Spring of both years are included in each map so that the contours sets can be compared.

Wells with water level measurements in either Spring 2024 or Spring 2025 are shown on **Figure 8**. Wells are color-coded by the agency (source) that provided the data. The number of wells for each of these data sets is summarized in **Table 5**. Water level data for Spring 2025 were not available from several of the agencies listed in **Table 5** in time for inclusion in this annual report.

[11] It is recognized that March irrigation occurs for some crops in the Antelope Valley, such as alfalfa and carrots, among others. According to a land use study by California State University, Los Angeles (Qiu, 2013), October appears to be the month when most crops in the Antelope Valley are not irrigated (i.e., end of the growing season for carrots and onions and prior to irrigation for winter grains). However, late fall measurements may be complicated by recovering water levels. In addition, other water supply wells may be pumping more in October than in spring. Spring data are also preferred by DWR for adjudication basin reporting. For these and other reasons, spring measurements are retained for the purposes of monitoring water levels and groundwater storage in the Basin.

Table 5. Groundwater Level Data by Source

Source of Water Level Data	Wells with Spring 2024 Data	Wells with Spring 2025 Data
U.S. Geological Survey (USGS)	159	174
Sanitation Districts of Los Angeles County (LACSD)	70	0
Antelope Valley-East Kern Water Agency (AVEK)	35	31
Los Angeles County Department of Public Works (LADPW) District 40[1]	56	0
Palmdale Water District (PWD)	24	21
Rosamond Community Services District (RCSD)	3	3
Quartz Hill Water District (QHWD)	10	10
City of Lancaster	1	0
Littlerock Creek Irrigation District (LCID)	0	0

1. Los Angeles County Department of Public Works (LADPW) District 40 data were only available for December 2024.

Contours were generated from these data using an electronic contouring program and adjusted locally, as needed. Wells outside the Adjudication Area were used to slightly adjust the orientation of the contours along the northern edge of the Adjudication Area, but those wells are not used in the change in storage analysis and are not shown on the contour maps to avoid confusion. Wells with measurements in only one of the two time periods were reviewed to determine if the incomplete data created artificial differences in the two contour maps. Where this occurred, wells were removed for the purposes of the change in groundwater in storage analysis. Wells were also removed if their water levels were believed to reflect recent or nearby pumping instead of static groundwater levels.

Management Subareas defined in the Judgment are considered in the analysis (**Figure 8**). Because some of these boundaries were developed along known or inferred geologic faults, data were examined to determine if groundwater elevations indicated a discontinuity across a Subarea boundary. In the southeast, the Subarea boundary between the South East Subarea and the Central Antelope Valley Subarea was observed to create a discontinuity, but the line of discordance was slightly different from the Judgment-defined Subarea

boundary. For the groundwater elevation analysis, an additional line was added in that area for purposes of contouring the data.

The contour maps for Spring 2024 and Spring 2025 are presented on **Figures 9** and **10**, respectively and discussed below.

Spring 2024 Water Levels: As shown on **Figure 9**, groundwater flows toward the south-central portion of the Basin, with the groundwater elevation contours in the southeast and west-northwest portions of the map indicating relatively steep hydraulic gradients (contours closely spaced). Water levels are lowest in northern Palmdale/southern Lancaster (north of the Palmdale Regional airport) and adjacent areas to the northeast – areas where most of the groundwater production occurs in the Basin. The lowest water levels during Spring 2024 are slightly below 2,050 feet msl in northern Palmdale. Relatively low groundwater elevations (below 2,200 feet msl) are also observed in the Rogers Lake Subarea beneath Edwards Air Force Base in the north. This dry lake area represents a natural discharge area of the Basin.

A portion of the South East Subarea is excluded from the contouring (see purple area on **Figure 9**). In this area, groundwater is relatively shallow, and contours must be manually controlled to prevent water levels appearing higher than the ground surface elevation. The area is sparsely populated and production or accurate monitoring well data are limited. The lack of data, shallow depth to groundwater, and large hydraulic gradients produce inaccurate contours in this area; accordingly, the area is excluded from the analysis to prevent artificial changes in groundwater in storage from being calculated.

As indicated by the contours in **Figure 9**, two Subarea boundaries appear to impede water levels and create discontinuities in water levels. In the northwest, the boundary between the Willow Springs Subarea and the West Antelope Subarea creates such a discontinuity as indicated by discontinuous contours (**Figure 9**; see **Figure 8** for Subarea names). This boundary is located generally along the fault zone of the Willow Springs, Cottonwood, and Rosamond faults, indicating that the faults impede water levels in the subsurface. The change in water levels across the fault zone ranges from about 50 feet on the eastern part of the boundary, near Rosamond, to about 200 feet in the west with higher water levels north of the fault zone.

In the southeast, the boundary between the Central Antelope Valley Subarea and the South East Subarea also indicates an area of disruption in water levels. The presence of the buttes and bedrock outcrops near and along the boundary suggests geologic faulting (inferred) and the Subarea boundary has been based on both geologic (faults) and hydrogeologic (water levels) data. Although recent data confirm a discontinuity in groundwater elevations along the northern portion of the Subarea boundary, the line of discontinuous groundwater elevations diverges from the Subarea boundary along its southern portion. (On **Figure 9**, compare the Management Subarea boundary shown in black with the line of discontinuous groundwater elevations shown in orange). For contouring purposes, an additional boundary line (shown in orange on **Figure 9**) has been interpreted. The water level declines around pumping wells northwest of the boundary do not appear to be affecting water levels

southeast of the boundary. In general, higher water levels occur south of the inferred faulting. The remaining Management Subarea boundaries of the Central Antelope Valley Subarea (with the Rogers Lake Subarea to the northeast and the West Antelope Subarea to the northwest) do not appear to impede groundwater flow.

Spring 2025 Water Levels: Groundwater elevation contours for Spring 2025 are shown on **Figure 10**. Given the scale and contour interval of the maps, water levels on **Figure 10** appear very similar to water levels on **Figure 9**. Previous analyses indicate that, except in areas of localized recharge or near certain pumping centers, water levels only change a few feet in most of the Basin from year to year; this observation is consistent with the 2024 and 2025 data and the hydrographs displayed on **Figure 7**. Patterns of groundwater flow and hydraulic gradients are also similar on both contour maps. The two boundaries that disrupted the contours for 2024 on **Figure 9** are also interpreted similarly on **Figure 10**.

Water Level Change from Spring 2024 to Spring 2025: Notwithstanding the similarities in **Figures 9** and **10**, several local areas have experienced significant water level changes from Spring 2024 to Spring 2025. Most of these changes are representative of the ongoing recharge of imported water in 2024 and the transport of water recharged in 2023. In 2024, 75,059.67 AF of water was recharged at water banking facilities and recharge projects (including 38,455.67 AF recharged by Metropolitan Water District), and only 5,394.09 AF was recovered. For example, in the Palmdale Water District, PWD Well 30 saw a rise in water levels by 38 feet between Spring 2023 and Spring 2024. This increase is attributed to the development of a recharge mound in the area. However, by Spring 2025, water levels had decreased slightly by 14 feet, reflecting the natural recession of the recharge mound as the water continued to move through the system.

For illustration purposes, the two contour maps have been electronically subtracted to develop a contour map of water level change, as presented on **Figure 11**. The changes are highlighted with color – areas of water level rise are shown in blue-violet, and water level declines are shown in orange-brown. Light yellow represents areas where water levels are generally unchanged. Contours have also been added to the map to differentiate among the areas of water level changes more clearly.

As shown on **Figure 11**, numerous areas show localized changes, the largest of which appear to be associated with groundwater banking areas. Many of these increased water levels are on top on groundwater recharge mounds from 2023 managed aquifer recharge. In general, groundwater levels increased near recharge sites from Spring 2024 to Spring 2025. They slightly decreased in areas with ongoing groundwater production.

In the West Antelope Subarea, water levels increased by over 60 feet near the High Desert Water Bank. In 2024, AVEK spread 38,455.67 AF of imported water for Metropolitan Water district. Water levels north of the High Desert Water Bank increased in response to recharge from 2023 and 2024. Water levels at Westside Water Bank increased by about three to seven feet, and water levels down-gradient (to the east and northeast) increased by about three to six feet. In 2024, AVEK recharged 22,525 AF of imported water at Westside Water

Bank. Increased water levels from recharge at the Westside Water Bank are also observed on the northwestern side of the Central Antelope Subarea.

In the Central Antelope Subarea, water levels increased in the south, reflecting recharge at the Upper Amargosa Creek recharge site and native recharge along the southern boundary. Spring 2025 water levels near the Upper Amargosa Creek are likely higher due to 1,244 AF recharged in 2024 and an additional 382 AF recharged during January through March 2025. Few data points exist near the Basin boundary, so locally high water levels near the creek may be extended further than actually occurred. Local declines in groundwater levels are observed near some production well fields. However, it is noted that water levels near these wells increased by more than ten feet from Spring 2023 to Spring 2024, so the lower groundwater levels may not indicate a declining trend.

In the South East Subarea, groundwater levels increased along Littlerock Creek, due to recharge. Increased water levels were observed near production wells several miles west of the creek, showing that recharge at the Littlerock Creek Pilot Project is affecting water levels at nearby production wells. Slightly west of the creek, water levels measured at a PWD well decreased from Spring 2024 to Spring 2025 by 19 feet. However, Spring 2025 water levels remain 19 feet higher than Spring 2023 water levels. The production well appears to be capturing recharged imported water.

3.6 SUBSIDENCE MONITORING

The historical decline of groundwater levels has been linked to land subsidence in the Basin. Water level declines cause a decrease in the aquifer pore pressure, allowing for re-arrangement and compaction of fined-grained units (i.e., clay) in the subsurface. As these sediments compact, the land surface can sink.

Historical land subsidence from groundwater pumping has been documented by USGS and others in the Antelope Valley (Ikehara and Phillips, 1994). Between 1930 and 1992, up to 6.6 feet of land subsidence occurred near Lancaster. At Edwards Air Force Base, land subsidence has caused cracked (fissured) runways and accelerated erosion on Rogers lakebed. USGS reports that this subsidence has also permanently reduced groundwater storage capacity by about 50,000 AF[12].

The distribution of land subsidence in the Antelope Valley from 1930 to 1992 is shown in feet of subsidence by the red contours on **Figure 12** (Ikehara and Phillips, 1994). Historical land subsidence has primarily affected the northern half of the Central Antelope Valley Subarea, and small portions of the West Antelope and Rogers Lake Subareas. An analysis of satellite-based InSAR[13] data indicates that an additional 0.2 to 0.6 feet of land subsidence

[12] In general, this loss of capacity is due to a one-time compaction of thick sequences of fine-grained layers that did not likely store significant quantities of usable groundwater.
[13] Interferometric Synthetic Aperture Radar (InSAR) provides high-resolution measurement of changes in the land surface over large areas using radar signals from Earth-orbiting satellites.

occurred between 1993 to 2005 in sections of the subsidence-prone area. Land subsidence from groundwater level declines can be a relatively slow process and continue for years after the pore pressure changes have occurred.

Additional information and data on historical land subsidence are available through USGS, which has established a network of 85 elevation benchmarks for the purposes of monitoring land subsidence. In addition, three extensometers have been installed at Edwards Air Force Base to measure land subsidence directly.

More recently, DWR has entered into an agreement with TRE ALTAMIRA, a satellite imagery processing firm, to provide annual InSAR data of ground surface displacement (including land subsidence), primarily for use in development of Groundwater Sustainability Plans (GSPs). InSAR data are published on the DWR online SGMA Data Viewer (TRE ALTAMIRA, 2024). Land subsidence data are presented on **Figure 13** for two time periods: the long term change (2015-2024) and the annual change. The total land subsidence from June 2015 to October 2024 is shown on the top map and annual data for the calendar year (January 2024 -January 2025) is shown on the bottom map of **Figure 13**. Vertical displacement data measured by InSAR during this period in California are accurate within 20 mm (0.8 inches) (Towill, 2024).

These InSAR data indicate that between 2015 and 2024, subsidence of up to approximately 0.3 feet (dark orange shade areas) has occurred in the center portion of the Central Antelope Valley Subarea and in small areas in the western portion of the Rogers Lake Subarea, eastern portion of the Willow Springs Subarea, and eastern portion of the South East Subarea (top figure of **Figure 13**). In general, detectable land subsidence was concentrated in the same areas where historical subsidence had been mapped by USGS (**Figure 12**). Between January 2024 and January 2025 only relatively low detectable rates of subsidence (less than 0.1 feet) have occurred throughout the Basin (bottom figure of **Figure 13**). This may be a response to the slight rise in ground surface that was observed throughout the entire Basin in 2023.

Currently, the Watermaster Engineer is using the ongoing groundwater level monitoring program as a proxy for subsidence monitoring. If water levels are maintained above historic lows in key areas of historical subsidence, then decreasing pore pressures in previously un-compacted clay layers can be avoided. By monitoring water levels and maintaining levels above historic lows, when possible, future land subsidence from groundwater pumping can be minimized.

For future Annual Reports, the Watermaster Engineer will continue to supplement groundwater level monitoring with DWR publicly available InSAR data, assuming the continuation of the DWR contract. Due to the time lag associated with land subsidence, it is recognized that local subsidence could continue as a result of historical conditions; however,

(https://www.usgs.gov/centers/ca-water-ls/science/interferometric-synthetic-aperture-radar-insar?qt-science_center_objects=0#qt-science_center_objects).

if water levels are maintained at or above historic low levels, this subsidence can be minimized.

3.7 GROUNDWATER QUALITY

Groundwater provides a high-quality water supply for beneficial uses in the Antelope Valley groundwater basin (SNMP, 2014). Water quality data for the Basin are available from a variety of online sources that can be tracked for ongoing Basin management. Data from these monitoring programs can be accessed by the Watermaster Engineer for future analyses involving water quality concerns in local areas on an as needed basis. Some baseline water quality data are provided herein for general information only.

3.7.1 Data Sources

As part of the CASGEM monitoring plan, USGS samples a subset of Antelope Valley wells for groundwater quality. In total, about 60 USGS NWIS wells have had water quality sampled since 2010. Typically, about 10 wells are selected for chemical analyses each year, with the remaining wells sampled for specific conductance and temperature only. Data are archived online in the USGS NWIS and often reported on GAMA Geotracker.

The USGS also collects water quality data as part of the State's ongoing Groundwater Ambient Monitoring & Assessment (GAMA) Program. Data are available from the State Water Resources Control Board (SWRCB or State Board) and can be downloaded from the GAMA Groundwater Information System (SWRCB, 2024).

In addition to the USGS analyses, public water suppliers are required to sample groundwater quality in public supply wells. Each entity has groundwater quality monitoring requirements associated with its permit from the Division of Drinking Water (DDW) of the SWRCB. Data are summarized in Consumer Confidence Reports prepared annually by the water purveyors. DDW (formerly Department of Public Health) also maintains these data in a public water quality database. Several public water suppliers have also provided recent groundwater quality data to the Watermaster Engineer.

The Salt and Nutrient Management Plan for the Antelope Valley (SNMP) has developed a groundwater quality monitoring plan using wells from the SWRCB GAMA program (SNMP, 2014). The plan includes 23 wells owned and operated by established water utilities or the U.S. Air Force in central and southeast portions of the Basin. The program supplements ongoing groundwater monitoring programs by monitoring constituents associated with management goals in the Basin including TDS, nitrate, chloride, arsenic, total chromium, fluoride, and boron.

3.7.2 Constituents in Groundwater

Total dissolved solids (TDS), an indicator of overall salt and mineral content, are present in groundwater at an average concentration of 420 milligrams per liter (mg/L) (DWR, 2004; SNMP 2014). TDS concentrations in monitoring wells are higher and are excluded from this

average value. These concentrations reflect a relatively low salt content and are significantly below the California Upper Secondary maximum contaminant level (MCL)[14] of 1,000 mg/L, which is based on aesthetic effects.

Figure 14 shows a distribution of the maximum TDS concentrations in wells sampled between January 2010 and December 2024. As shown on **Figure 14**, groundwater contains relatively low TDS over most of the Basin. TDS concentrations are relatively high in the northern Basin with concentrations higher than 1,500 mg/L in a localized area in the northeast portion of the Rogers Lake Subarea and in the northeast Central Antelope Subarea. Many of the wells reporting high TDS concentrations are monitoring a regulated facility. Other local areas of elevated TDS concentrations are found in the northeastern and southern portions of the Central Antelope Valley Subarea.

Consistent with other desert basin aquifers in Southern California, natural trace elements, such as arsenic and boron, can be elevated locally in the Antelope Valley (USGS and SWRCB, 2013). In general, groundwater quality for these constituents meets drinking water standards and water quality management goals throughout most areas of the Basin (SNMP, 2014).

The distribution of two additional water quality constituents, nitrate and arsenic, were reviewed for this report. Nitrate is a naturally occurring constituent in groundwater at low concentrations; elevated concentrations are typically related to fertilizers, wastewater effluent, septic systems, animal wastes, and other sources. **Figure 15** shows a distribution of the maximum nitrate as nitrogen concentrations in wells sampled between January 2010 and December 2024. The primary MCL[15] for nitrate (as nitrogen, N) is 10 mg/L. Nitrate (as N) concentrations are above 10 mg/L in some wells in the southern portion of the Central Antelope Valley Subarea, western portion of the South East Subarea, and eastern portion of the Willow Springs Subarea. Ten of the wells with nitrate concentrations near or above 10 mg/L are drinking water supply wells and the elevated nitrate concentrations in these wells ranged from 10 mg/L to 18 mg/L (2015-2024 maximums). Elevated concentrations in drinking water wells are treated or blended with other water so that delivered water meets water quality requirements.

Arsenic occurs naturally in rocks and soil and can enter drinking water supplies from natural deposits in the earth or from agricultural and industrial practices (IRWMP, 2019)**. Figure 16** shows a distribution of the maximum arsenic concentrations in wells sampled between January 2010 and December 2024. The primary MCL for arsenic is 10 micrograms per liter (ug/L). Elevated arsenic concentrations occur in the west portion of the Central Antelope Valley Subarea, southwest portion of the West Antelope Subarea, and in monitoring wells in a concentrated area in the northeast portion of the Rogers Lake Subarea (**Figure 16**).

[14] Secondary MCLs are non-mandatory water quality standards established as guidelines to assist public water systems in managing their drinking water for aesthetic considerations such as taste, color, and odor. These standards are not health-based and do not indicate a risk to human health.
[15] A primary maximum contaminant level (MCL) is the highest level of a constituent that is allowed in drinking water.

Drinking water wells with elevated concentrations above 10 ug/L have either been shut down or the supply is blended with other water so that delivered water meets water quality requirements (IRWMP, 2019). Wellhead treatment is also an option for elevated arsenic concentrations.

3.8 SURFACE WATER QUALITY

Numerous local agencies monitor the various sources of surface water in the Adjudication Area. Collection of the quality data for imported water (SWP water), recycled water, and stormwater is ongoing; data can be compiled into the Watermaster database in the future for analysis depending on priorities and budget.

SWP water is treated at the PWD Leslie O. Carter Water Treatment Plant (WTP) for use by PWD, LCID, and AVEK. AVEK's Acton WTP is currently off-line and PWD treats AVEK's SWP water for delivery to AVEK's Acton service area under an agreement between the two agencies. SWP water is also treated at three AVEK treatment facilities (Quartz Hill WTP, Eastside WTP, and Rosamond WTP). SWP water is high quality with TDS concentrations typically in the upper 200 mg/L range. In January 2025, SWP water at Palmdale had total dissolved solids concentration of 270 mg/L and a nitrate concentration of 0.42 mg/L (nitrate as nitrogen).

Littlerock Reservoir, jointly owned by PWD and LCID, collects runoff from the San Gabriel Mountains. Water from Littlerock Reservoir discharges to Lake Palmdale and is subsequently treated at the PWD treatment plant.

Recycled water is produced at the County Sanitation Districts of Los Angeles County (LACSD) Palmdale and Lancaster water reclamation plants (WRPs), Edwards Air Force Base (EAFB) Air Force Research Laboratory Treatment Plant and the Main Base Wastewater Treatment Plant (WWTP), and the RCSD's WWTP. Tertiary treated effluent from LACSD is used for agriculture, purple pipe system (parks, landscaping, etc.), and environmental purposes. Treated water from the two EAFB plants is used only on the base.

In 2022 RCSD's WWTP completed upgrades to their facilities to include denitrification of effluent. They have the capacity to treat up to 1.26 million gallons per day (mgd) of raw wastewater to acceptable levels for disposal by percolation to groundwater. In December 2022, percolation ponds for this tertiary treated water replaced the clay-lined evaporation ponds at RCSD WWTP. The new percolation ponds are operated under a new Waste Discharge Permit and Monitoring and Reporting Plan and a Storage Agreement with the Watermaster. In 2024, nitrate as NO3 concentrations, reported quarterly, at the twelve RCSD WWTP monitoring wells ranged from 0.13 mg/L to 21 mg/L, below the 45 mg/L nitrate as NO3 MCL.

Currently, recycled water in the Antelope Valley meets most drinking water standards (SNMP, 2014). EAFB recycled water quality tends to have higher salt and nutrient concentrations (e.g., TDS, nitrate, chloride); elevated TDS and chloride concentrations have

been linked to the higher mineral content in the lower aquifer, which serves as the source water for recycled water in that area (SNMP, 2014).

3.9 GROUNDWATER PRODUCTION MONITORING AND METER INSTALLATION

The Physical Solution allocates groundwater production of the Native Safe Yield among numerous parties to the Judgment including the U.S. Federal Government, the State of California, Overlying Producers (Exhibit 4 of the Judgment), Non-Overlying Producers (Exhibit 3 of the Judgment), and members of the Small Pumper Class (see **Figure 2**). The Watermaster is continuing to collect information on locations of active wells.

Known locations of wells owned by Parties in the Judgment are shown on **Figure 17**. The map shows locations of water supply wells owned by the public water suppliers (yellow), the U.S. Federal Government (purple), the State of California (blue), and agricultural, commercial, and other landowners (green). The service areas of the public water suppliers and mutual water companies are also shown on **Figure 17** to better differentiate among the wells.

A basin-wide map showing the distribution and amounts of groundwater pumping in 2024 has been developed from information provided by Parties on their 2024 Annual Production Reports (**Figure 18**). This map includes Exhibit 4, Exhibit 3, Federal, State, Non-Stipulating, and New Production Parties. It also includes production for the recovery of stored water. Only wells with known locations (most by APNs) are shown on the map. The large red circles indicate areas where production is over 1,000 AF in 2024 and can represent more than one well in close proximity. The slightly smaller orange circles designate areas where production ranged from 100 to 1,000 AFY, while yellow circles indicate areas where production was between 50 and 100 AFY. Green circles indicate areas with production greater than 0 but less than 50 and blue circles indicate wells that did not produce anything in 2024. As indicated on **Figure 18**, groundwater pumping occurs throughout the Basin with the most concentrated area of pumping in the eastern half of the Central Antelope Valley Subarea. Production totals for the Basin and by Party are included in the water accounting discussions in **Section 5** of this report, along with various related appendices.

The open purple circles on **Figure 18** represent wells where 2024 production has not yet been reported and only includes wells with known locations. A list of outstanding production reports is included in **Appendix M-2**. **Section 5.3** discusses the status of production reporting.

Table 6 shows the percentage of total reported production in 2024 by Subarea for the wells shown on **Figure 18. Table 6** also shows the distribution of Production Rights (for Exhibit 3, Exhibit 4, Federal, and State Parties) and Carry Over Water (Exhibit 3, Exhibit 4, and State Parties). The values shown in this table include the recovery of stored water. Some parties have active wells in multiple Subareas. Their Production Right and Carry Over Water volumes were attributed to each Subarea in proportion to their 2024 production volume for these calculations.

In 2024 over two-thirds of the total Basin production occurred in the Central Antelope Valley Subarea. Several parties reported their production but have not confirmed their well location. Overall production in 2024 was less than the sum of Production Rights. The total production in the Central Antelope Subarea, including reported New Production and the recovery of stored water, in each Subarea in 2024 was higher than the Production Right assigned to the Subarea. This is largely due to the use of imported water return flows, unused Federal Reserved Rights, and Carry Over. This also includes production by Non-Stipulating Parties, New Production parties, and others with rights to produce outside of the Native Safe Yield. Most of the Production Rights and Carry Over in the 'Unknown or No Point of Extraction' category are due to parties that intend to use their water for investment purposes and have not yet identified a point of extraction.

Carry Over water, shown in **Table 6**, includes water received through one-time transfers in 2024 or earlier. In general, the distribution of Carry Over water reflects the distribution of Production Rights by Subarea. A higher percentage of Carry Over water is located in the South East Subarea, compared to the Production Right percentages. More discussion of Carry Over Water, including a comparison of Carry Over by Subarea each year, is in **Section 5.5**.

Table 6. 2024 Production, Production right, and Carry Over by Subarea

	2024 Production	Percent Production	Production Right	Percent Production Right	Carry Over for use in 2024	Percent Carry Over
Central Antelope Valley Subarea	46,321	70%	44,676	55%	142,826	52%
Rogers Lake Subarea	2,301	3%	7,214	9%	13,154	5%
South East Subarea	9,940	15%	9,771	12%	20,672	8%
West Antelope Subarea	6,240	9%	14,526	18%	74,979	28%
Willow Springs Subarea	1,805	3%	2,428	3%	5,878	2%
Unknown or No Point of Extraction	22	0%	1,930	2%	14,821	5%

Figure 19 shows the resulting 2,380 known Small Pumpers as of early June 2025 and includes about 91 Unknown Small Pumpers (as referred to in the Judgment), who have now qualified as Small Pumpers. No new parties qualified as Small Pumpers in 2024.

3.9.1 Production Monitoring and Metering

The Judgment requires the Watermaster Engineer to monitor safe yield components, including groundwater production, and to ensure that reductions in pumping take place pursuant to the terms of the Judgment (¶18.5.2). Since 2018, production monitoring (i.e., reporting) has included documentation of how each Party measures the reported production. Although production in public water supply wells is measured directly with well meters, many of the agricultural and other wells in the Basin did not historically install

meters. As such, reported production for those wells has historically been estimated using a variety of methods including electrical records or crop consumption data.

As stated by the Judgment, all Parties (except the Small Pumper Class) have been required to install meters on their wells by December 23, 2017 (within two years after the Judgment) to measure production directly. The Watermaster requested and was granted an extension to March 1, 2018 to complete the required meter installation. The Watermaster Engineer has developed Rules and Regulations providing guidance and requirements for selection, installation, and testing of well meters. The approved Rules and Regulations are posted on the Watermaster website.

To ensure that meters were properly installed, the Watermaster Engineer has selected numerous contractors and qualified personnel as Pre-Qualified Meter Installers. All Pre-Qualified Meter Installers were required to comply with consistent reporting and documentation of new meter installations. In addition, the rules required documentation of existing well meters to ensure that all wells were metered in compliance with the regulations. The requirements also allow for a variance in the rules if well owners can demonstrate that an alternative meter installation will result in accurate production monitoring. Materials related to the meter requirements are available on the Watermaster website, including the pertinent Rules and Regulations, and the list of pre-approved meter installers and testers.

Administrative staff, Watermaster Counsel, and the Watermaster Engineer are working together on enforcement to achieve full compliance with meter requirements. Administrative staff maintains a list of non-compliant Parties for reporting to the Board. The Watermaster Board expressed a renewed interest in metering and reporting compliance enforcement in 2023. In 2024, the Watermaster Engineer conducted a detailed review and update of its database to include metering compliance and reporting by party and sent parties emails informing them of their metering compliance status.

3.9.2 Small Pumper Class Production Monitoring

The Judgment defined a Small Pumper Class of Producers as “all private (i.e., non-governmental) Persons and entities that own real property within the Basin, as adjudicated, and that have been pumping less than 25 acre-feet per Year on their property during any Year from 1946 to the present” (¶3.5.44). The Judgment allows any Small Pumper Class Member to produce up to 3 AFY for reasonable and beneficial use on their overlying land without being subject to a Replacement Water Assessment (¶5.1.3).

As mentioned above, the list of known Small Pumpers in the Judgment *(Exhibit A to Judgment Approving Small Pumper Class Action Settlements: List of Known Small Pumper Class Members for Final Judgment)* was reviewed to eliminate duplicates and to eliminate properties that receive water from a water district. The resulting list of known Small Pumpers totals 2,289. As mentioned above, an additional 91 Qualifying Small Pumpers have been identified since the Judgment was finalized, increasing the list of Small Pumpers to

2,380. These Small Pumpers are listed on the Notice list in **Appendix L** and are shown on **Figure 19**.

In May 2020, Administrative Staff mailed Administrative Assessment invoices to over 4,000 potential Small Pumper parcels, however, as mentioned before, many of these were duplicates or receive water from a water district. The current list of Small Pumpers totals 2,378. The invoices covered 2016 to 2020 Administrative Assessments based on an average production of 1.2 AFY per existing household or parcel (¶5.1.3). Each invoice was for $25.20. In addition to an invoice, each Small Pumper parcel also received a Small Pumper Information form to complete and return to the Watermaster with the invoice payment. The information form includes contact information, APN, and parcel address; this information was used to update the current Small Pumper list. As of June 2024, records show that 923 Small Pumpers have submitted invoice payments for a total of $ 23,196.96[16]. Another round of invoices for Small Pumper Administrative Assessments will be sent in 2025.

The Judgment states that the "primary means for monitoring the Small Pumper Class Members' Groundwater use…will be based on physical inspection by the Watermaster, including the use of aerial photographs and satellite imagery" (¶5.1.3.2). The Watermaster Engineer and Watermaster Counsel have been made aware of multiple Small Pumpers that appeared to be producing groundwater in excess of the maximum amount. As those parties have been identified, the Administrative Staff and Watermaster Counsel have contacted each, worked to obtain relevant data, eliminate any over-production under the Judgment, and require payment of assessments and other steps to bring them into compliance with the Judgment. Should the Watermaster develop a reasonable belief that any Small Pumper Class Member is using in excess of 3 AFY, the Watermaster can require, among other actions, the well owner to install a meter at the well owner's expense.

Starting in 2022, the Watermaster uses data from OpenET to assess potential water use on small pumper parcels. OpenET is a tool developed by a consortium of private and public partners and led by Environmental Defense Fund, NASA, Desert Research Institute, and HabitatSeven. The tool utilizes satellite-based estimates of the total ET by month by parcel. The data are available at a spatial resolution of 30 meters by 30 meters (0.22 acres per pixel). OpenET publishes data from remote sensing using a variety of methods. For this analysis the Watermaster is using the METRIC algorithm. **Figure 20** shows the estimated ET over the basin using OpenET. The darker areas indicate larger ET rates and are most likely irrigated agriculture. In the 2022 Annual Report, nineteen small pumper parcels were identified as using over 3 AFY and were investigated to see if irrigation on the parcel is from another metered source. In 2023, two small pumpers were identified as potentially overpumping in 2023. The analysis excluded Small Pumpers who are believed to also have Exhibit 4 rights or are believed to be receiving imported water. OpenET data were utilized in December 2024 to identify potential illegal pumping in the Western Antelope Subarea.

[16] Each invoice was for $25.20 based on an annual production of 1.2 AF and Administrative Assessments of $1 for 2016 and $5 for 2017 through 2020. Some Small Pumpers only paid for the years they owned the property.

3.9.3 2024 Land Use Monitoring

To provide a Basin-wide perspective for groundwater use, land use in the Adjudication Area has been incorporated into the monitoring program. Land use acreage from Department of Water Resources (DWR) and the Kern County Agricultural Commissioner and ET data from remote sensing on the OpenET[17] portal are used to estimate land use and areas of agricultural water use. The ET data for calendar year 2024 (**Figure 20**) allow for an estimation of irrigated agricultural lands, especially alfalfa fields as indicated by the dark blue circles in the Basin. These new data sets are publicly available and identify water use areas more accurately than the color-infrared aerial photographs shown in previous annual reports. As shown on the figure, most of the irrigated agriculture is indicated in the eastern half of the Central Antelope Subarea. Additional agriculture also occurs throughout the remainder of the Basin, with some fields visible on aerial photographs but not being irrigated as of the date of the ET data set on **Figure 20**. Limited change has occurred since last year. A comparison of **Figure 20** with **Figure 17** indicates a reasonable correlation between the location of agricultural wells and the higher ET values indicating irrigated fields across the Basin.

To standardize the tracking of irrigated agriculture across the basin, land use from the DWR was used. Land use maps are available for California for 2014, 2016, 2018, 2019, 2020, and 2021, 2022, and 2023. Only provisional data from the DWR LandUse Viewer were available for 2023 land use, and 2024 DWR LandUse Viewer data were not available. The number of acres associated with irrigated agriculture is shown in **Table 9** for each year since the Final Judgment (comparable data were unavailable for 2017). For 2024 agricultural acreage values, Kern County acreages are from the Department of Agriculture and Measurement Standards annual GIS crop maps. It was assumed that LA County acreages were the same as the DWR values in 2023.

By relying on the same DWR land use data sets for both counties, land use estimates are more accurate, comprehensive, and consistent over time than compiling information from each county separately. This data set replaces the previous land use data sets that had been estimated from other sources including the Kern County Department of Agriculture and Measurement Standards annual GIS crop maps and the Los Angeles County Pesticide and Restricted Material Permits from the Los Angeles County Agricultural Commissioner / Weights & Measures. The new data indicate a larger area of agricultural lands in LA County than in previous annual reports because the pesticide permit data used in previous reports underrepresented total acreage. In particular, the pesticide permit data excluded some lands used for pasture and grain production, which may not use pesticides.

[17] OpenET remote sensing data has been developed by a team of leading national and international experts in remote sensing of ET, cloud computing, water policy, and water markets in collaboration with USGS, NASA, USDA, EDF, major universities and others; see additional information at openetdata.org/about/.

As indicated on the last row of **Table 7**, the number of irrigated agricultural acres in the Basin decreased from 2016 to 2023 by about 65 and 33 percent, for Kern and LA County respectively. Key changes include reduced acreage for pasture and truck crops in Kern County and a significant decrease in pasture (alfalfa) acreage in LA County. Over the past few years, the acreage of alfalfa in LA county and idle agricultural areas have varied from 3,155 acres (2022) to 6,576 acres (2018) while acreages for truck, deciduous, and other crop types have remained steady in both counties. As Rampdown has been completed, we anticipate acreages to remain fairly steady, with a possible variation in alfalfa production based on hydrologic conditions.

The acreages from the DWR data (**Table 7**) align with the total agricultural acreage shown by the publicly available ET data (METRIC model) in **Figure 20**. These combined data sets will provide a more reliable data set for assessing water use in the Basin, screening for potential illegal pumping, and monitoring Small Pumper class production in future annual reports, as required by the Judgment. Land use data are also being incorporated into the Basin groundwater model (under development).

Table 7. DWR Estimated Agricultural Acreage in the Antelope Valley

County	Crop Type	2016	2017*	2018	2019	2020	2021	2022	2023	2024**
Kern	Deciduous	408	-	414	414	414	414	411	409	409

*No comparable land use data were available for 2017

**DWR Land Use data not yet available, Assumed same as 2023 for LA County. Used Kern County Department of Agriculture and Measurement Standards data for 2024 Kern County.

Data from DWR LandUse Viewer (including 2023 Provisional Data)

4 WATER BALANCE

A quantitative assessment of the water balance (or water budget) of the Antelope Valley Adjudicated Basin was developed, using the numerical model, and presenting estimates of inflows, outflows, and change in groundwater volume for the Basin and within each Subarea. This is the first Antelope Valley Watermaster Annual Report that includes a water balance calculated using the numerical model.

In previous Annual Reports, the change in groundwater volume was calculated from the Spring-to-Spring change in groundwater elevations (shown in **Figure 11**), using a methodology similar to the one used in the 2010 Summary Expert Report (Beeby et al., 2010). The shift from the 'change in water level' method to the numerical model increases accuracy, aligns the timeframe with calendar year annual reporting period defined in the Judgment (¶3.5.4), and provides more insight into the basin inflows. The change in water level method over-emphasized the spatial extent of recharge and recovery at groundwater banking facilities. The use of open-source numerical models is DWR's preference, included in their Water Balance Best Practices (DWR, 2016).

The Antelope Valley Groundwater Model developed by the USGS was based on historical data for years 1915 -2005. For this Annual Report, newly available data were used to improve and update analyses for recent years. Results for 2016 through 2024 are discussed here including the shift to using the Antelope Valley Groundwater Model to calculate the change in storage.

4.1 ANTELOPE VALLEY GROUNDWATER MODEL

During 2024, the Watermaster Engineer finalized the update of a numerical Basin-wide groundwater model to support the Watermaster with a management tool for administering the Judgment. The Watermaster model is based on the Antelope Valley Groundwater Model developed by the U.S. Geological Survey (USGS), augmented with additional spatial coverage spanning the Adjudicated Area and supported by datasets compiled for recent years. The model was developed in phases during 2022 through 2024 to manage costs. When completed, the updated model will serve as a tool to assist with Watermaster duties, including (1) monitoring of safe yield components, (2) conducting Basin-wide material injury analyses, (3) water budget support for the Annual Reports, and (4) future applications involving estimation of changes in groundwater in storage and evaluation of regional groundwater conditions in future annual reports.

The current Watermaster Model includes revisions to the earlier version of the Antelope Valley Groundwater Model developed by the USGS (Siade, et al., 2014). The existing model was updated to reflect the adjudication boundaries and bring the model period to current conditions. Major changes to the model include extension of the grid, software updates, updates to recent data (pumping, mountain front recharge, stream flow, and pumping), and compiling groundwater elevation data for verification. Details of this model update are in the 2023 Annual Report.

Technical needs that can be met with a groundwater model include:

- Improved estimates of streamflow runoff and recharge
- Calculations of basin storage capacity for Storage projects and other uses
- Improved estimates of annual change in storage associated with groundwater extractions and other hydrologic changes in the Basin over time
- Material Injury Analysis regarding water level impacts from changes in groundwater extractions.
- Assessment of potential for increased inelastic land subsidence in critical areas of the Basin.

4.2 METHOD OF ANALYSIS:

The Antelope Valley Groundwater Model, developed by the USGS and updated by Todd Groundwater, was used to develop the water budget.

Groundwater Model. The Antelope Valley Groundwater Model was originally developed for MODFLOW-2005, but was updated to MODFLOW 6 by Todd Groundwater, reflecting the most recent MODFLOW software and making future improvements easier to implement. MODFLOW simulates subsurface flow by combining equations representing flow through porous sediments (the Darcy Equation) with equations that enforce conservation of mass. The equations are implemented numerically, which means that they are applied simultaneously between all adjoining cells in a model grid through an iterative process. Its 1,000-meter by 1,000-meter uniform grid spacing was maintained but expanded to the adjudicated boundary as part of the model update.

The numerical model is the best tool to quantify the Antelope Valley water balance. The model will continue to be updated for future Annual Reports, providing a better understanding of the groundwater system and a tool to evaluate future conditions, management actions, and Material Injury. Additional information about the model can be found in the 2023 Annual Report and Model Documentation, included as Appendix B-7 for that Annual Report.

Tables 8 shows the water balance and change in groundwater volume from 2016 through 2024, and **Figure 21** provides a graphical representation of these data. **Table 9** summarizes the water balance from 2020 through 2024 for each Subarea. In **Table 9**, the total change in groundwater volume is the sum of recharge and discharge in each Subarea, as well as net subsurface inflow from adjacent Subareas. **Figure 22** shows the water balance by Subarea in 2024.

Table 8. Water Balance and Change in Groundwater Volume, 2016-2024

Calendar Year	2016	2017	2018	2019	2020	2021	2022	2023	2024
Groundwater Inflow (AF)

4.3 INFLOWS

The main sources of recharge are mountain front and stream recharge (natural groundwater recharge, conceptualized in **Figure 3**), agricultural and urban return flows, and imported water recharge at water banks. Mountain front and stream recharge is closely linked with hydrologic conditions, and the availability of imported water similarly reflects wet and dry conditions in the source area. Subsurface inflows and dispersed recharge from precipitation are assumed to be negligible.

Mountain front and stream recharge: Mountain front recharge does change in the updated model from year to year, scaled to precipitation. The total mountain front recharge volume was scaled to precipitation in a manner consistent with past USGS mountain front and stream recharge The total average flux across all cells for the 2016 to 2024 period was estimated to be equivalent to the original USGS (2014) value of approximately 30,000 acre feet/year (AFY). The model assumes a lag time of approximately six months, from precipitation to recharge.

Agricultural and Urban Return Flows: Agricultural return flows were based on estimates associated with crop types; these fluxes were applied across those cells used to represent agricultural return flows in the USGS (2014) model, along with additional cells based on recent aerial imagery. A constant total agricultural return flow flux (approximately 17,000 AFY) was assumed and applied in areas with irrigated crop acreages. Similarly, urban return flows were assigned to the same cells used for those fluxes in the USGS (2014) model, averaging approximately 29,000 AFY. Return flows from both groundwater and imported water use were included.

Agricultural and Urban Return flows use MODFLOW's Unsaturated Zone Flow (UZF) package. This package is parametrized and estimates the lag time (for water to percolate through the unsaturated zone to the unsaturated zone) and the distribution and transport of recharge. This package will be recalibrated in the 2025 Annual Report, once longer return flow

estimates are available (post-2015). Agricultural return flows are estimated by crop type, and the annual values were kept constant in this Annual Report as land use acreages have not significantly changed in the past three years; these values will be updated annually in a future Annual Report, if needed. Urban return flow was kept constant, consistent with the USGS's assumptions.

Imported Water Recharge: Aquifer recharge via groundwater banking (e.g., banking operations at AVEK Westside, AVEK Eastside, High Desert Water Bank, RCSD, Upper Amargosa Creek, and Little Rock Creek) was represented by additional flux terms in MODFLOW's Recharge package. Monthly recharge volumes at water banking facilities are included in the water budget. These values are reported directly from AVCSWA and the water agencies operating each facility. The model incorporates a lag time after water is spread for deep percolation and accounts for evaporation.

4.4 OUTFLOWS

Pumping is the primary source of model outflow.

Reported and Estimated Production: Production values, reported by well in Annual Production Reports, are the primary source of production data (shown in **Figure 18**). Small pumper production was estimated, based on the locations shown in **Figure 19**. These wells had unspecified screened intervals in most cases. Locations were indicated by parcel number. Based on a review of area drilling logs and of the representation of pumping in the USGS (2014) model, pumping wells were assumed to be screened, at least in part, across both model Layers 2 and 3 in portions of the model where both layers are active. The partitioning of pumping between the two layers was adjusted to improve the match between simulated and observed groundwater elevations in both layers; approximately two-thirds of the pumping flux was assigned to Layer 3.

Springs and Evapotranspiration: Evapotranspiration is included in the model for areas where the water level is within ten feet of the ground surface. Discharge from springs is likely negligible. Evapotranspiration and springs only contribute to discharge for cells located in the northern portion of the Central Antelope Subarea. These grid cells were assigned in the USGS's 2014 model parameterization.

Subsurface Outflow to External Basin: Antelope Valley is a relatively closed basin, but the Antelope Valley Groundwater Model does include boundary conditions that simulate discharge from Antelope Valley to Fremont Valley (to the northeast) and Mirage Valley Groundwater Basin (in the southeast corner of the South East Subarea). At both boundaries, groundwater will flow out of the basin when water levels are higher than specified conditions and flow into the basin when groundwater levels were lower than specified conditions – for the 2016 to 2024 period, there has been a net outflow from the Adjudicated Basin.

4.5 WATER BALANCE AND CHANGE IN GROUNDWATER VOLUME

Previous Annual Reports calculated change in groundwater volume by multiplying a surface representing change in groundwater levels by the estimated specific yield, a value representing the volume of groundwater drained from each aquifer unit. This methodology was used by Beeby et al., 2010, during the adjudication process and was used in past Annual Reports. In general, this method captured trends in groundwater volume over time. However, the analyses appeared to over-emphasize the change in storage near recharge or recovery operations or recent production from municipal wells. The calculated changes in groundwater volume from year-to-year appeared to be skewed to reflect conditions near recharge facilities or municipal wells.

The Antelope Valley Groundwater Model can calculate the change in groundwater volume as well as general groundwater elevation, while accounting for more complicated conditions. The model derived groundwater change in storage is based on the simulated inflows and outflows as well as model parameters. The updated model shows a strong calibration for levels but additional validation on the change in storage is currently being conducted and results will be included in the next draft of the Annual Report. Recharge and recovery at water banks are represented in the model by the volume of reported recharge, and the extent of the recharge mounds is interpolated based on aquifer properties and groundwater elevation gradients. The use of the model as the change in groundwater volume calculation method is indicated to yield more accurate and detailed results.

The Native Safe Yield defined in the Judgment, estimates an annual recharge (inflow) volume of 82,300 AFY from native recharge and recharge from groundwater (including irrigation return flows). When imported water return flows are included, the Judgment defines the Total Safe Yield as 110,000 AFY. The Total Safe Yield is the volume of average annual inflow estimated in the Judgment, excluding the storage of imported water. The model estimates that the total annual inflow in 2024 was 170,832 AF. Excluding the recharge of imported water at banking facilities, this value was 101,833 AF. A more detailed discussion of the relationship between the Safe Yield defined in the Judgment and water balance components will be discussed in the 2025 Annual Report.

In 2024, the net change in groundwater volume, or change in storage, for the Basin was 99,460 AF (**Table 8**). This is also shown in **Figure 21**. In general, a positive change in groundwater volume occurs during years with relatively high precipitation and a higher State Water Project Table A allocation. The cumulative change in groundwater volume since the beginning of 2016 is 182,390 AF.

The total inflows in 2024 are higher than 2023 even though higher rates of precipitation and groundwater banking occurred in 2023. The model assumes a time lag between when precipitation falls in the surrounding mountains and the mountain-front recharge. Similarly, the model assumes a time lag between when water is spread in a basin for recharge and when that recharge reaches the saturated aquifer. In short, wet conditions in 2023 contributed to higher inflows in 2024.

As shown on **Figure 21** and in **Table 9**, the scale of change in storage can vary between Subareas. The West Antelope Subarea had the highest increase in groundwater volume in 2024 (65,926 AF). This is largely due to recharge of imported water at the Westside Water Bank and the High Desert Water Bank. Subsurface outflow was into the Central Antelope Subarea (about 9,800 AF).

In the Central Antelope Subarea, the increase in groundwater volume was 19,532 AF in 2024. Inflows to the Central Antelope Subarea have remained relatively stable since 2020, but the outflows vary due to a wide range in pumping. This is the only Subarea with discharge from from evapotranspiration and springs (-972 AF from evapotranspiration and -16 AF discharged at springs).

The total increase in groundwater storage in the South East Subarea was relatively high in 2024 (12,948 AF). This is due to high native recharge and water banking. The modeled outflows to the Mirage Valley Groundwater Basin do not appear to be influenced by production or managed aquifer recharge in the South East Subarea or other parts of the Basin. The modeled rate of discharge out of the Basin has not changed significantly over the past five years, despite changes in the overall groundwater volume in the South East Subarea. While monitoring well data is limited in this area, modeled groundwater elevation contours suggest that some mountain-front and stream recharge in the southeast corner of the basin may be directed towards the Mirage Valley Groundwater Basin. Gaining a stronger understanding of the volume and flowpath of groundwater discharged to other basins will be helpful to inform management.

Rogers Lake Subarea is the only Subarea with a negative change in storage in 2024. Almost all of its inflows are from mountain front recharge and stream percolation. While these values were relatively high in 2024, production was higher than it has been in previous years, causing an overall negative change in groundwater volume.

5 WATER ACCOUNTING

This section provides details on the water accounting for the Parties to the Judgment. The accounting process includes documentation of the Rampdown schedule, 2024 production, actual Rampdown use, allocation and use of Imported Water Return Flows (IWRFs), Carry Over water, and information on other water categories such as transfers and storage. Also included are details on the wastewater and recycled water practices that occurred within the Adjudication Area in 2024 and details on the well applications program for 2024.

Production Rights, Rampdown, Unused Federal Reserved Water Right, Imported Water Return Flows, and Carry Over water available to each Party in 2024 are tabulated in a single line entry for each Party in the tables in **Appendix B**. Other water available to Parties, such as transfers and storage, are tabulated in separate appendices and discussed in more detail in this section. Accounts remain incomplete for Parties that have not reported their 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023 and/or 2024 annual production. Parties are encouraged to contact the Watermaster Staff and Watermaster Engineer if their records differ from what is presented in this report. The water accounting tables are posted on the Antelope Valley Watermaster website to allow transparency of the data. This also allows each Party the opportunity to review their individual accounts, providing an additional check for accuracy.

Previously, water accounting tables and appendices have been re-generated each year using Microsoft Excel formats. The Excel-based water accounting data has transitioned to a Database Management System (DMS) for improved water accounting. The new DMS has been developed using Microsoft Access to allow the Watermaster Engineer to better track various water accounts in the Basin including the date stamping of Carry-over water, proper assignment of imported water return flows, tracking of Rampdown, identifying water availability and other requirements of the Judgment. The Access database format was paired with Microsoft Report Builder to allow development of tables and appendices for the Annual Report. This combination allows these items to be generated more efficiently with outputs formatted similar to previous reports for consistency. During the transition to this database, the Excel-based water accounting system was maintained as an internal check to ensure the integrity of the formulas and accounting of the new DMS.

5.1 PRODUCTION RIGHT AND PRODUCTION CATEGORIES

Production Right is defined in the Judgment as "the amount of Native Safe Yield that may be Produced each Year free of any Replacement Water Assessment and Replacement Obligation. The total of the Production Rights decreed in this Judgment equals the Native Safe Yield" (¶3.5.32). The circle graph on **Figure 2** illustrates the allocation of Production Rights among the Antelope Valley Producers, which totals 82,300 AFY[18].

[18] Figure 2 does not include Production Rights of the Non-Stipulating Parties.

Additional groundwater production categories are identified throughout the Judgment; the primary production categories are listed on the left side of **Figure 2**. These categories, including provisions and limitations in the Judgment, have been considered in developing the water accounts.

5.2 RAMPDOWN SCHEDULE

In accordance with Paragraph 8.3 of the Judgment, Producers that were allocated a portion of the Native Safe Yield (except the Small Pumper Class, the State of California and the United States) have been required to reduce production from a Pre-Rampdown Production amount to the Production Right. In this manner, the Basin would be brought into balance over the seven-year Rampdown Period in accordance with the Judgment-defined Native Safe Yield. The Pre-Rampdown Production amount is defined as the "reasonable and beneficial use of Groundwater, excluding Imported Water Return Flows, at a time prior to this Judgment, or the Production Right, whichever is greater" (¶3.5.28). The Rampdown Period extended from 2016 through 2022; the reduction in production associated with the Rampdown occurred in years 2018-2022.

The Rampdown schedule for 2016 through 2022 for each Party with a Pre-Rampdown Production right is provided in **Appendix A**. **Table A-1** lists the Rampdown schedule for the Exhibit 3 Non-Overlying and Non-Stipulating Parties while **Table A-2** lists the Rampdown schedule for the Exhibit 4 Overlying Producers. Beginning in 2018, Pre-Rampdown Production was reduced linearly over a five-year period to reach the Production Right in 2024, the second year after Rampdown.

Pre-Rampdown Production amounts for the Exhibit 4 Producers were provided in the Judgment. Pre-Rampdown Production amounts (**Table A-1**) for the Exhibit 3 Producers and Non-Stipulating Parties were not provided in the Judgment and the values in **Table A-1** have been approved by the Watermaster Board (Todd Groundwater Memorandum, June 22, 2018).

5.3 2024 REPORTED PRODUCTION AND WATER ACCOUNTING

In compliance with the Judgment, a production reporting process including a reporting form and a deadline for submittals has been developed. Although reporting compliance has improved, not all Parties have submitted annual production reports, and some Parties have not reported production for any year. Types and numbers of Parties and the associated reported 2022, 2023, and 2024 production are summarized in **Table 10**.

Production in **Table 10** is divided into two groups: Parties with Production Rights and Parties without Production Rights. As shown in **Figure 2,** the Parties with Production Rights include members of the Exhibit 3, Exhibit 4, U.S. Federal, State of California, and Small Pumper Classes. All parties but Small Pumper parties report their production each year. The reported production shown in this table includes water accounted for by using Imported Water Return Flows, Unused Federal Reserve Rights, and Carry Over Water, as well as

overproduction. Small Pumper Class production calculated using an average production of 1.2 AFY per existing household or parcel (¶5.1.3).

Parties without Production Rights include New Production Parties, which must pay Replacement Water Assessments for all water used, or other parties with special circumstances defined in the Judgment.

The recovery of stored water is the production of water that has been recharged into the basin. It does not represent production that is the recovery of native groundwater from storage (82,300 AFY Native Safe Yield) or the recovery of imported water return flows (110,000 AFY Total Safe Yield). **Table 10** includes values for the subtotal for Parties with Production Rights and the total production minus the recovery of stored water is shown in **Table 10.** These values help identify the volume of production that represented the removal of native groundwater from storage.

As of June 2025, the total reported and estimated 2024 production, excluding the recovery of stored water, was 63,563.21 AF. Of the Parties with Production rights, this value was 62,570.11 AF, lower than the 82,300 AFY Native Safe Yield defined in the Judgment. This is the second lowest annual production since the Judgment was finalized in 2015. The low total production in 2024 was a combined result of the end of Rampdown and availability of imported water. More groundwater was produced in 2024 than in 2023, a very wet year with a 100 percent Table A State Water Project allocation.

Appendix M-2 contains a list of Exhibit 3, Exhibit 4, State of California, United States, Non-Stipulating Parties, and New Production Parties that have not submitted 2016 through 2024 Annual Production Reports as of June 2025. Rules and Regulations have incorporated incentives for production reporting compliance including requiring complete reporting prior to approval of new wells or transfers. Enforcement actions are being considered to achieve compliance with reporting requirements in the Judgment. The Production Rights of the 86 missing 2024 Production Reports add up to about 999.43 AF (see **Appendix M-2**) which represents about 1.2 percent of the Native Safe Yield (999.43/82,300 AF).

Table 10. 2022, 2023, and 2024 Production Reported by Party

Party	2022			2023			2024		
	Total Number of Parties	Reported Production (AF)	Number of Missing Production Reports	Total Number of Parties	Reported Production (AF)	Number of Missing Production Reports	Total Number of Parties	Reported Production (AF)	Number of Missing Production Reports
Production Rights									
Exhibit 3 Parties	11	34,799.20	0	11	21,785.07	0	11	30,054.35	0
Exhibit 4 Parties[1,2]	118	53,055.19	16	118	37,787.78	16	123	33,082.10	17
U.S. Federal[3]	1	1,226.08	0	1	1,226.63	0	1	1,341.21	0
State of California	9	0	6	9	0.79	6	9	7.85	5
Small Pumper (estimate)	2,380	3,084.60	NA	2,380	3,084.60	NA	2,380	3,084.60	NA
Subtotal	***139***	***92,165.07***	***22***	***139***	***63,884.87***	***22***	***144***	***67,570.11***	***22***
Subtotal Minus Recovered Stored		***72,262.58***			***56,850.22***			***62,176.02***	
Parties without Production Rights									
New Production Parties[4]	85	125.39	33	103	297.99	34	81	478.3	4
Non-Stipulating Parties[5] and Others with Rights to Produce	9.00	1,022.82	3	11	1,259.62	1	11	908.89	2
Total	233	93,313.28	58	253	65,442.48	57	236	68,957.30	28
Total Minus Recovered Stored Water		**73,410.79**			**58,407.83**			***63,563.21***	

1. Includes production that was recovered stored imported water: 19,902.49 (2022), 7023.65 AF (2023), and 5,394.09 AF (2024). All this stored water was recovered by AVEK

2. Total number of Exhibit 4 Parties has increased because of split of rights and transfers to entities that intervened to become Exhibit 4 members.

3. Small Pumper Class production calculated using an average production of 1.2 AFY per existing household or parcel (¶5.1.3).

4. New Production Parties in 2022 and 2023 include Parties whose rights to produce were revoked in 2024 due to non-reporting

5. White Fence Farms is a Non-Stipulating party that received Exhibit 4 Production Rights in 202. Its total production is split between Tables B-2 and B-3. Antelope Valley Joint Union High School District also has its production split between Tables B-2 and B-3.

The Watermaster Administrator has been working with Parties to improve production reporting compliance and to infill missing production reports from previous years. The current status of reporting for 2017 through 2021 production is summarized in **Table 11**. Total production in 109,494.78 AF in 2016 and 90,939.67 in 2017. Data in **Tables 10** and **11**

indicate that reported production has declined since 2016 and may be leveling off, while still showing lower production rates in wet years and higher production rates in dry years. In addition to non-reporting Parties, these two tables do not include all the production categories associated with Native Safe Yield. For example, the following production is not summarized in the tables: metered and unmetered production from the Small Pumper Class members, production that recovers Stored Water, and most of the New Production approved after the Final Judgment.

Table 11. Status of Production Reporting for 2018 through 2021

Party	Total Number of Parties	2018		2019		2020		2021	
		Reported Production (AF)	Number of Missing Production Reports	Reported Production (AF)	Number of Missing Production Reports	Reported Production (AF)	Number of Missing Production Reports	Reported Production (AF)	Number of Missing Production Reports
Exhibit 3 Parties	11	30,849.48	0	23,630.32	0	29,481.01	0	37,919.81	0
Exhibit 4 Parties	107	50,054.85	6	53,523.54	8	52,862.75	11	58,172.24	14
U.S. Federal	1	1,321.27	0	1,240.76	0	1,347.73	0	1,394.02	0
State of California	9	11.66	5	12.57	6	11.63	6	12.95	6
Non-Stipulating Parties and Others with Rights to Produce	9	1,207.12	1	989.49	1	1,189.73	1	1,151.43	2
Total[1]	137	83,444.38	12	79,396.68	15	84,892.85	18	98,650.45	22
Total Minus Recovery of Stored Water				70,134.72		72,664.45		79,574.68	

1. Includes production that was recovered stored imported water: 9,261.96 AF (2019), 12,228.40 AF (2020), and 18,907.75 AF (2021).

Appendix B presents detailed accounting of water sources (Production Right, Rampdown, unused Federal Reserved Rights, Imported Water Return Flows, Transfers, Carry Over water, and use of stored water in lieu of groundwater) for 2024 for each Party to the Judgment. Note that all Parties may not have rights to all these water source types. In addition to the sources of water available for production each year, the tables show the amount of groundwater produced and the sources of water assigned to that production for 2024. In general, production was first assumed to be derived from each Party's Production Right (as required by the Judgment). Additional production was then assumed to come from Rampdown, allocation of unused Federal Reserved Rights, IWRFs, and then Carry Over, if applicable. Parties may elect to use Stored Water before use of their Production Rights. More details of IWRFs are in **Section 5.4**.

To facilitate review by the Parties, columns on the tables in **Appendix B** have been numbered and formulas used to develop the account details are shown. Providing the column numbers and formulas allows Parties to better understand how numbers were derived and ensure that the amounts developed by the Watermaster Engineer balance with each Party's internal records.

Tables B-1 and **B-2** present the water accounts for the Exhibit 3 Non-Overlying Producers and the Exhibit 4 Overlying Producers, respectively. These tables track the transfers of Production Rights over time. **Table B-3** contains water accounts for Other Parties including:

- United States Federal Government
- State of California
- Non-Stipulating Parties
- Antelope Valley Joint Union High School District (AVJUHSD), City of Lancaster, and PPHCSD
- Parties with rights to Imported Water Return Flows but have no other rights to produce groundwater (these parties may not own or produce from wells).
- Defaulted Parties that are known or suspected of producing groundwater and are in the process of requesting New Production or in discussions with the Watermaster.

Table B-4 provides water accounts for those entities that have been granted New Production under the Antelope Valley Watermaster Rules and Regulations (see **Section 5.11** for information on the New Production well application process). Replacement Water Assessments must be paid for all New Production. The first successful New Production application was approved in March 2018. **Table B-5** summarizes Parties with multiple rights to produce water.

Table B-6 lists all parties, except for Small Pumper Class Parties with no additional Rights to produce, defaulted parties, and Exhibit 8 parties with no known well, in alphabetical order and provides their total Production Right or New Production and Carry Over Water for Use in 2025.

As per the Judgment (¶5.1.4.1), unused Federal Reserved Water Rights (associated with Edwards Air Force Base and Air Force Plant 42) in any given year will be allocated to the Non-Overlying Production Rights holders (except for Boron CSD and West Valley County Water District) in the following year, in proportion to Production Rights set forth in Exhibit 3 of the Judgment. This unused portion of the Federal Reserved Right is to be used by the Non-Overlying parties in the year available and is not subject to Carry Over (¶15). The United States is to give the Watermaster at least a ninety-day notice if its Production is anticipated to increase more than 200 AFY in the following 12-month period (¶11.1). Increased demand by the United States can be meet with increasing Production or by accepting imported water deliveries. Any Party can propose a water substitution or replacement to the United States. If a Party's proposed imported water substitution is agreed upon by the United States, the United States will reduce Production by that amount

and the Party can Produce that amount of Native Safe Yield free from a Replacement Water Assessment in addition to their Production Right (¶11.2).

The Non-Stipulating Parties are subject to all provisions of the Judgment but are not entitled to benefits provided by Stipulation, including but not limited to Carry Over and Transfers (¶5.1.10) (**Table B-3**). SCI California Funeral Services, Inc. dba Joshua Memorial Park successfully intervened to become Non-Stipulating Party in 2019 and was granted a Production Right for 38 AFY. Other Parties, such as the City of Lancaster and the AVJUHSD, were given rights to produce groundwater up to certain amounts until recycled water becomes available (**Table B-3**). Phelan Piñon Hills Community Services District (PPHCSD) does not have Production Rights, but according to the Judgment, is allowed to pump up to 1,200 AFY from its Well #14 provided such production does not cause Material Injury and the District pays a Replacement Water Assessment and any other costs deemed necessary to protect Production Rights defined in the Judgment, on all water produced and exported (**Table B-3**). The bottom of **Table B-3** lists six Parties that have rights to Imported Water Return Flows but do not have Production Rights. These six Parties have the right to produce, carry over, transfer, or store these Imported Water Return Flows in the future if they choose. At this time, only Edgemont Acres has a known active well.

Small Pumper Class Members can produce up to 3 AFY for reasonable and beneficial use on their overlying land without being subject to a Replacement Water Assessment, reporting production or installing a meter on their well(s). Small Pumper Class Members pumping over 3 AFY are required to install meters on their wells. In previous years, **Table B-3** contained two Small Pumper parties, Antelope Valley Country Club and Long Valley Road L.P., who have produced more than 3 AFY and have metered wells. Antelope Valley Country Club is now an Exhibit 4 Party and included in **Table B-2,** and Boething Treeland Farms is now a New Production Party, included in **Table B-4**. The parties have retained their Small Pumper Right.

Table B-4 lists applicants that have been granted New Production. A total of 132 New Production applications were approved through May 2025 but 16 of these were either for temporary use, encountered dry boreholes and subsequently withdrew their applications, or have decided not to drill at this time. The total volume of new production approved in Antelope as of May 2025 is 903.62 AFY. In April 2025, the Watermaster revoked New Production applications for 34 Parties that have not reported production to the Watermaster after Watermaster Admin reached out to them repeatedly. The sum of New Production for these revoked applications is 103.38 AFY. Revoked applications are shown in **Figure 25**.

5.4 IMPORTED WATER USE AND RETURN FLOWS

AVEK, PWD, and LCID are State Water Project (SWP) contractors with turnouts along the east branch of the California Aqueduct to import SWP water into the Antelope Valley. AVEK imports SWP water and treats a portion of this water at its four water treatment plants for delivery to its municipal and industrial customers. AVEK also delivers untreated SWP water

for agriculture use and recharge for subsequent recovery and delivery to its customers. PWD imports SWP water for treatment through its water treatment plant located at Lake Palmdale and delivers the treated water to its urban customers directly. PWD also wheels small amounts of imported water to AVEK and LCID. LCID does not have a treatment plant for its SWP allocation but has conducted exchanges with AVEK in the past.

In 2024, the State Water Project allocations were 40% of Table A volumes. **Appendix C-1** provides details on the amount of water imported by AVEK, PWD, and LCID, and the amounts recharged (banked), sold to customers, or put into Lake Palmdale in 2024. A total of 67,262 AF of SWP water was imported into the Adjudicated Area in 2024. In 2024 AVEK imported 55,647 AF, PWD imported 9,220 AF, and LCID imported 2,395 AF. Additionally, 38,432 AF of MWDSC's water was recharged at the High Desert Water Bank. A summary of stored water in 2024, storage agreements, and storage facilities is provided in **Section 5.8**.

AVEK has provided a facilities location map and a detailed flowchart showing where its water went in 2024. These are included for reference in **Appendix I.** The flowchart depicts the distribution of AVEK's imported water, groundwater, and recovered water supply (total of 61,215 AF) (**Appendix I Figure 2**) and illustrate the complexity of AVEK's water distribution. AVEK delivery, storage, and recovery sites are shown on the figure (**Appendix I Figure 1**). Note that the Watermaster Engineer is unable to independently verify all these numbers and relies on the banking Parties to supply accurate information for the annual reports.

As provided in Paragraph 5.2 of the Judgment, Parties listed on Exhibit 8 of the Judgment have a right to produce – in any year – Imported Water Return Flows equal to the applicable percentage multiplied by the average amount of imported water used by that Party within the Basin in the preceding five-year period. AVEK has rights to the Imported Water Return Flows used by Parties not on Exhibit 8 of the Judgment. **Appendix D** lists imported water use for 2011 through 2024 and Imported Water Return Flows for 2016 through 2024 by the 37 Parties on Exhibit 8. Return flows from agricultural imported water use are set in the Judgment at 34 percent and return flows from municipal and industrial imported water use are set in the Judgment at 39 percent of the amount of imported water used.

The Imported Water Return Flow calculations do not include imported stored water in the Basin pursuant to a Storage Agreement (see **Section 5.8**). Stored imported water is included in the Imported Water Return Flow calculations once it has been recovered and applied for agricultural or municipal and industrial use. In past years, the Imported Water Return Flow calculations had erroneously included stored imported water for Tejon Ranch, PWD, and LCID. These values have been corrected in this Annual Report, and water accounting in **Appendix B** for these parties has been updated accordingly.

Appendix C-3 contains storage and recovery information for the other projects and Parties in the Adjudicated Area. These include Antelope Valley Water Storage LLC, Tejon Ranchcorp, LCID, Upper Amargosa Creek Recharge Project Parties, the AVSWCA recharge at Big Rock Creek, and the Little Rock Creek Pilot Project.

The volume of water that each applicable Party has available for storage is also included in **Appendix B-6**.

Additional information on stored water and storage agreements is provided in **Section 5.8**.

5.5 CARRY OVER WATER

Producers can carry over an unproduced portion of an annual Production Right or a right to Imported Water Return Flows to the next year under certain conditions as defined by the Judgment. Producers are also allowed to purchase imported water and forego a portion of the Production Right to the Carry Over water account (In Lieu Production Right Carry Over, ¶15.1 of Judgment). Carry Over water amounts for Producers with unused Production Rights orImported Water Return Flows for 2024 or one-time transferred received in 2024 or earlier, are documented in the tables in **Appendix B**.

Production Rights can be carried over pursuant to either Judgment Paragraphs 15.1 or 15.3, and in either case the amount of Carry Over is the amount of the Production Right that was not used. The Watermaster presumes that Carry Over of Production Rights is developed pursuant to Judgment Paragraph 15.3, unless the Producer claims Carry Over under Paragraph 15.1 and provides documentation that the specific requirements of Paragraph 15.1 have been met. To date, all Carry Over of Production Rights has been pursuant to Judgment Paragraph 15.3.

According to the Judgment, water eligible for these accounts may be carried over for up to ten years. With the earliest Carry Over amounts occurring at the beginning of 2017, these Carry Over accounts could reach the 10-year limit at the end of 2026. At the end of the Carry Over period, the Producer may enter into a Storage Agreement with the Watermaster to store unproduced portions of Carry Over water. If not converted to a Storage Agreement, Carry Over water not Produced by the end of the tenth year reverts to the benefit of the Basin and the Producer no longer has a right to the Carry Over water (¶15.1, 15.2, 15.3). In 2024, the Watermaster developed a Carry Over tool to define the age distribution of Carry Over water. The age distribution of Carry Over is in **Appendix B-7.** Oldest Carry Over water is used first, and it retains its age across transfer. The process of developing and reviewing Storage Agreements for Carry Over water is underway.

Figure 23 shows the distribution of Carry Over throughout the Basin. Each party's total Carry Over water, including transferred Carry Over water, was distributed between its wells based on its 2025 Production rates. **Figure 24** shows the distribution of Carry Over by Subarea from 2017 to 2025 (2017 refers to Carry Over available for use in 2017). A Party's Carry Over water volume was assigned to each Subarea based on the locations of that Party's active wells. If the party has wells in multiple Subareas, the Carry Over was distributed to each Subarea in proportion to 2024 production. The total volume of Carry Over has increased over time. By the end of 2024, there was 272,330 AF of Carry Over available for use. Most of the Carry Over water available for use each year is in the Central Antelope Subarea. The Carry Over owned by parties with no identified point of extraction has also increased over

time. Several Parties have received transfers of Carry Over water without identified points of extraction to use the Carry Over as an investment (**Table F-5**). Some Parties have not confirmed their well locations, so a Subarea cannot be assigned. They will be required to submit a New Point of Extraction application or submit a subsequent transfer prior to using their Carry Over water.

5.6 REPLACEMENT OBLIGATIONS

The purpose of Replacement Water is to ensure that each Party may fully exercise its Production Right by keeping the basin in hydrologic balance. A Producer has a Replacement Obligation if its production of groundwater is more than the sum of its rights to pump groundwater including Production Rights, Carry Over water, Imported Water Return Flows, in-lieu production, and Stored water. During the first two years of the Rampdown Period (2016 and 2017), Producers were not subject to Replacement Water Assessment fees. Exceptions to this include Phelan Pinon Hills Community Services District (PPHCSD) and entities that illegally produced water not under the Judgment. PPHCSD does not have a Production Right. However, according to the Judgment, PPHCSD is allowed to pump up to 1,200 AFY from its Well #14, provided such use does not cause Material Injury and PPHCSD pays a Replacement Water Assessment and any other costs deemed necessary to protect Production Rights defined in the Judgment, on all water produced and exported.

Replacement Obligations are listed in **Appendix E**. **Appendix E** includes the producers that have Replacement Obligations, the Replacement Obligation amount, if a transfer or payment was used to fulfill the Replacement Obligation, and the status of recharging the Replacement water. **Appendix E** summarizes Replacement Obligations as of May 2025 and does not include Replacement Obligations for New Production Parties. Those are listed in **Appendix B-4**. **Appendix E** also does not include Exhibits 3 or 4 Parties that already had transfers in place for their Replacement Obligations. Note that not all Parties have reported production and there are other entities with potential Replacement Obligations. When identified, additional entities with Replacement Obligations will be added to **Appendix E**.

The Replacement Water Assessment fee for 2025 was set at $636 per acre-foot for Producers within the State Water Contractor service areas and at $1,224 per acre-foot for Producers outside the State Water Contractor service areas, with the differences reflecting capital costs paid through property taxes by Parties inside the State Water Contractor service areas. **Section 1.6.2** provides more discussion of the determination of these fees.

5.7 TRANSFERS

Appendix F tabulates all transfers of Production Rights, or other rights to produce groundwater under the Judgment that have occurred to date. The transfers have been reported on five separate tables. The **Appendix F-1** table lists permanent transfers that are not associated with a split of rights or transfers of water associated with sale of Exhibit 3 and Exhibit 4 Parties, the **Appendix F-2** table lists non-permanent transfers that are generally one-time transfers, the **Appendix F-3** table lists transfers that are associated with

a split of Production Rights, and the **Appendix F-4** table lists transfers associated with property sales of Exhibit 3 and Exhibit 4 Parties. Transfers that are associated with a property sale or a successor-in-interest appear in the second column of the water accounting tables (**Appendix B**). No change in Production Rights or production locations are associated with these types of transfers. An additional summary table, **Appendix F-5** lists transfers approved for investment purposes only – each transfer shown in **Appendix F-5** is also shown on at least one of the other **Appendix F** tables. Use of this transfer water will require approval of a subsequent transfer application or a New Point of Extraction application since no Material Injury analysis was conducted on these transfers.

The **Appendix F** tables include the names of the Transferor and the Transferee and the parcels associated with each Party. Also listed is the type of transfer (e.g., property sale, transfer of rights, merger, split of rights). The tables also include the transferred amount and date of transfer as well as the status of the voting rights associated with any permanent transfer of Production Rights. The transferees associated with Production Right transfers are also indicated in the second column of the water accounting tables (**Appendix B-1 and Appendix B-2**) to identify the new owner of those Production Rights. **Appendix B-6** does not show the transfer history, and the total water available to each party includes permanent and non-permanent transfers.

Non-permanent transfer amounts are also shown in the water accounting tables (**Appendix B**) in two places. Transfers that occurred before 2025 are shown in the left portion of the tables in the *Water Available for Use in 2025* section. This transfer water can be used to satisfy past RWAs or becomes supply available for the Party to use in 2025. Transfers that were approved in 2025 are shown at the end (right side) of the **Appendix B** water accounting tables. This is water that the Party has available for use for a 2024 RWA or outstanding past RWAs and/or for use in 2024 or future years.

Transfers to Parties are represented in **Appendix B** as a positive number because it is additional water available to that Party. Transfers from Parties are represented as a negative number because the Transferee has sold that water to another Party and it is no longer available to the Transferee. There have been no transfers by the Antelope Valley United Mutuals Group[19]. As required in the Judgment, a separate accounting for Antelope Valley United Mutuals Group transfers will occur if any of such transfers take place.

[19] The members of the Antelope Valley United Mutuals Group are Antelope Park Mutual Water Company, Aqua-J Mutual Water Company, Averydale Mutual Water Company, Baxter Mutual Water Company, Bleich Flat Mutual Water Company, Colorado Mutual Water Co., El Dorado Mutual Water Company, Evergreen Mutual Water Company, Land Projects Mutual Water Co., Landale Mutual Water Co., Shadow Acres Mutual Water Company, Sundale Mutual Water Company, Sunnyside Farms Mutual Water Company, Inc., Tierra Bonita Mutual Water Company, West Side Park Mutual Water Co. and White Fence Farms Mutual Water Co., together with the successor(s)-in interest to any member thereof.

5.8 STORED WATER AND STORAGE AGREEMENTS

All Parties have the right to store water in the Basin pursuant to a Storage Agreement with the Watermaster. Storage could include Carry Over water or imported water that has been brought into the Basin and recharged. AVEK may export any of its imported Stored Water to any area outside its jurisdictional boundaries and the Basin, provided all water demands within its jurisdictional boundaries are met. Stored Water that originated as other imported water may also be exported, subject to a technical determination by the Watermaster of the percentage of the Stored Water that is unrecoverable; such unrecoverable Stored Water is dedicated to the Basin (¶14 of the Judgment).

Production from Stored Water is not subject to an Administrative Assessment (¶9.1 of the Judgment). Paragraph 6.3 of the Judgment prohibits unauthorized Parties to claim rights to produce any Stored Water recharged in the Basin, except pursuant to a Storage Agreement with the Watermaster.

According to the Judgment, Carry Over water can be carried over for up to ten years. At the end of the Carry Over period, the Producer may enter into a Storage Agreement with the Watermaster to store unproduced portions of Carry Over water. Because this is year nine of the Judgment, no Parties have entered into Storage Agreements for Carry Over water. In 2024 the Watermaster Board, Advisory Committee, Counsel, and Watermaster Engineer began conversations to establish the process, timeline, and information needs of creating Storage Agreements for Carry Over water.

Several storage and recovery (banking) projects involving Stored Water are currently in operation in the Basin including some projects that were in existence prior to the Judgment. Nothing in the Judgment limits or modifies operations of these preexisting banking projects (operators are listed in ¶14 of the Judgment).

In 2024, recharge occurred at the following locations:

- AVEK High Desert Water Bank (0 AF for AVEK; 38,456 AF for MWDSC)
- AVEK Westside Water Bank (22,525 AF)
- AVEK Eastside Water Bank (1,220 AF)
- RCSD WWTP Percolation Ponds (1,160 AF)
- Upper Amargosa Creek Recharge Facility (participating Project Parties: City of Palmdale, PWD, District No. 40, and AVEK) (1,244 AF)
- Little Rock Creek Recharge (participating Parties: PWD, and LCID) (4,395 AF)

No water was recharged in 2024 at the remaining recharge locations in the Basin:

- Antelope Valley Water Storage LLC Willow Spring Water Bank (formerly the Antelope Valley Water Bank)
- Big Rock Creek Recharge (participating Parties: AVEK, PWD, and LCID)
- Tejon Wate Bank (Tejon Ranch)

- LCID State Water Project water recharge facility

These banking projects are described below, and operations are documented quantitatively in **Appendices C-2, C-3,** and **C-4**.

Appendix C-2 provides a summary of the amount of water spread and recovered at each of AVEK's storage and recovery locations. Information includes the total imported water stored at the beginning and end of 2024 and the amount of water recovered for use inside and outside the Adjudicated Area. Banking and recovery information is shown separately for each storage and recovery location. AVEK provided the Watermaster this information and includes the following recharge locations:

- High Desert Water Bank
- Westside Water Bank
- Eastside Water Bank
- Upper Amargosa Creek
- Big Rock Creek
- Littlerock Creek Pilot Project

All the banks have a storage loss factor of 10 percent except for the Tejon Water Bank which has a storage loss factor of 6 percent. The Tejon Ranchcorp Company is in the process of gathering information supporting this 6 percent storage loss factor and for developing a Storage Agreement. Antelope Valley Water Storage LLC has submitted technical documents and an application for its Willow Springs Water Bank for development of a Storage Agreement. AVEK will also be supplying the Watermaster with technical documents for its banking locations. The need and format for a Storage Agreement for pre-existing banks has been discussed along with the potential fees associated with this review and development of the Storage Agreements. These pre-existing banks include AVEK's Eastside Water Bank and Westside Water Bank, the Willow Springs Water Bank, and the Tejon Water Bank.

AVEK finalized the facilities of its High Desert Water Bank and began full operations in 2023. This Water Bank is a partnership between AVEK and MWDSC. This facility has 280,000 AF capacity to store approximately 70,000 AFY per year of SWP surface water conveyed to the site via the California Aqueduct. Water stored at the High Desert Water Bank for use by MWDSC will be recovered and returned to the California Aqueduct, with a 10% loss factor. AVEK stores and recovers the water for use by MWDSC. Water stored by AVEK for use by MWDSC is tracked in **Appendix C-2**. MWDSC imported water is not included in **Appendix C-1** because the water is for use outside of the Basin. However, this volume does affect the Basin's water balance and is incorporated into water balance calculations (**Section 4**).

AVEK's Westside Water Bank, formally referred to as Water Supply Stabilization Project No. 2 (WSSP-2), is capable of storing up to 150,000 AF of water using low-bermed recharge basins covering about 1,000 acres of agricultural fields. AVEK's Eastside Water Bank consists of three 2-acre recharge basins and three groundwater wells that are used for recharge and recovery of raw SWP water. The recovered water is blended for delivery to the Eastside

Water Treatment Plant. **Appendices C-1** and **C-2** summarize AVEK storage and recovery in 2024 at its High Desert, Westside, and Eastside water banks. It has also recovered stored water at its West Avenue H Wellfield and the WSSP-1 Well locations. These are shown as recovering Westside Water Bank stored water.

Appendix C-3 contains storage and recovery information for the other projects and Parties in the Adjudicated Area. These include Antelope Valley Water Storage LLC, Tejon Ranchcorp, LCID, Upper Amargosa Creek Recharge Project Parties, the AVSWCA recharge at Big Rock Creek, and the Little Rock Creek Pilot Project.

The Willow Springs Water Bank (WSWB) (formerly called the Antelope Valley Water Bank) is located in the Central Antelope Valley Subarea. The WSWB is located on 1,838 acres of agricultural land near Rosamond in Antelope Valley. It consists of percolation ponds and has a reported storage space of 500,000 AF and recharge and recovery capacities of 100,000 AFY. The Southern California Water Bank Authority (formerly called the Semitropic-Rosamond Water Bank Authority) operates the WSWB and the Semitropic Water Storage District Stored Water Recover Unit (SWRU), which is not located in Antelope Valley. Operating both the WSWB and the SWRU, which are located in different areas in Kern County, provides more flexibility to acquire, exchange and deliver water. The combined storage space capacity is reported at 800,000 AF with a 133,000 AFY recharge capacity and a 200,000 AFY recovery capacity. Banking information indicates that 200,000 shares will be issued to customers in the combined facilities. Each share will provide customers with the following capacities:

- 1 AFY recovery plus lower priority capacity when available
- 3 AF in SWRU or 5 AF in WSWB of storage plus lower priority capacity when available
- 0.33 AFY in SWRU or 1 AFY in WSWB of recharge plus lower priority capacity when available.

Water agencies can purchase shares in the water bank and pay annual fees per share plus fees for depositing water and for extracting water. Ten percent of all water deposited in the water bank is required to be left behind to keep the bank viable. The basin is also credited with evaporation losses based on actual conditions including temperature and wind conditions when the percolation occurs (Beuhler, 2017).

In 2024, no water was recharged at the WSWB (**Appendix C-3**).

The Tejon Water Bank was built in 2006 and is owned and operated by the Tejon Ranchcorp and Tejon Ranch Company on 160 acres in northeast Kern County. In 2024, no water was spread and no water was recovered at this recharge location (**Appendix C-3**).

LCID completed an upgrade to its existing State Water Project water recharge facility and a Storage Agreement for banking and recovery, and it was approved at in 2020. LCID has begun recharging at its 1.25-acre recharge basin and anticipates that annual spreading will generally exceed 400 AFY. The basin can hold approximately 7.5 AF of water at one time and

spreading rates will range between 1 to 8 AF/day. In 2024, no water was recharged at this facility (**Appendix C-3**).

Recharge at the Upper Amargosa, Big Rock Creek, and Littlerock Creek Recharge Projects are all coordinated by project partners or AVSWCA. The distribution of water may be revised based on agreements between the project partners. The breakdown of water available for recharge and recovery is shown in **Appendix C-3**. In 2024, 1,244 AF was recharged at the Upper Amargosa Recharge Project, no water was Big Rock Creek Recharge site, and 4,395 AF was recharged at Littlerock Creek Recharge Site.

The Littlerock Creek Pilot Project is a discharge location at Littlerock Creek where State Water Project water was discharged from LCID's turnout. Streamflow was monitored and recorded to ensure that the flow did not reach Rosamond dry lake. AVSWCA is currently working towards developing a storage agreement for this site. 2024 was the second year for the Littlerock Creek Recharge Site pilot project. Both Big Rock Creek and Little Rock Creek Sites will require a storage agreement.

A Storage Agreement for RCSD was approved in 2020. In 2022 the RCSD WWTP was upgraded, and it began discharging treated wastewater into percolation ponds instead of clay-line evaporation ponds. Recharge began in December 2022. In 2024, 1,159.72 AF was spread by RCSD. Return flows from treated wastewater are tracked in **Appendix C-4.**

In December 2024, in agreement between the Watermaster and the AVSWCA, an additional 310.98 AF was dedicated to the basin for replenishment of 2023 Replacement Water Assessments. These amounts were deducted from stored imported water by AVEK, PWD, and LCID. These amounts are shown in Appendix C for LCID and PWD.

At the end of 2024, these Parties that store water in the Adjudicated Area possess a collective total of 255,509 AF of recoverable stored water (see **Appendices C-2, C-3, and C-4)**. Storage at each location is summarized below.

- AVEK High Desert Water Bank = 51,396 AF (6,3789 AF is AVEK water and 51,396 AF is MWDSC water that is stored for use outside of the Adjudicated Area)
- AVEK Westside Water Bank = 133,209 AF (106,209 AF is AVEK water and 27,700 AF is water that is stored for use outside the Adjudicated Area)
- AVEK Eastside Water Bank = -1,461 AF (deficit)[20]
- Antelope Valley Water Storage LLC Willow Spring Water Bank = 3,614 AF
- Tejon Water Bank = 51,189 AF
- LCID recharge facility = 405 AF

[20] AVEK is currently reducing the storage deficit at Eastside Water Bank with additional imported water for recharge. In addition, **Figure 18** suggests that 2023 recharge at Littlerock Creek Recharge Project increased water levels near Eastside Water Bank.

- Upper Amargosa Creek Recharge Project[21] = 2,465 AF
- Big Rock Creek Recharge Site[22] = 187 AF
- Littlerock Creek Recharge Site[24] = 12,347 AF
- RCSD WWTP Percolation Ponds = 2,159 AF

The volume of water that each applicable Party has available for storage is also included in **Appendix B-6**.

To date, the Watermaster has entered into four storage agreements (**Appendix G**). They are with RCSD for recharge of treated wastewater, LCID for its re-activation of its SWP recharge site, project partners for recharge at the Upper Amargosa Creek Recharge Facility, and AVEK for groundwater storage and recovery at the High Desert Water Bank.

5.9 DROUGHT PROGRAM

The Judgment contains provisions for a Drought Program which is defined as a water management program – in effect only during the Rampdown Period – that affects the operations and Replacement Water Assessments of the participating Public Water Suppliers (called Drought Program Participants)[23] (¶3.5.12). During the Rampdown Period, the Drought Program Participants agreed to minimize excess groundwater production and use all water made available by AVEK at no more than the current AVEK treated water rate in any year they produced groundwater in excess of their rights under the Judgment. Drought Program Participant Production was not considered excess Production exempt from a Replacement Water Assessment under this Drought Program unless a Drought Program Participant utilized all water supplies available to it including its Production Right, Imported Water Return Flow rights, unused Production allocation of the Federal Reserved Water Rights, imported water, and Production rights previously transferred from another Party (¶8.4.2).

During the Rampdown Period, only Palm Ranch Irrigation District and North Edwards Water District produced in excess of their rights. In 2022, North Edwards Water District produced 6.42 AF in excess of its total groundwater rights. In 2019, Palm Ranch Irrigation District received a one-time transfer of 2,850 AF of which 41.65 AF was used as its Replacement Obligation for 2018 overproduction. No Replacement Obligation was needed for 2017 because Producers were not subject to Replacement Water Assessment fees during the first

[21] Upper Amargosa Creek Recharge Facility participating Project Parties are the City of Palmdale, PWD, District No. 40, and AVEK. Big Rock Creek Recharge participating Parties are AVEK, PWD, and LCID.

[22] Big Rock Creek recharge site and Little Rock Creek recharge sites are Antelope Valley State Water Contractors Association (AVSWCA) projects proposed for recharge. AVSWCA members are AVEK, PWD, and Littlerock Creek ID. The site is currently in the pilot testing phase and a storage agreement with the Watermaster has not been completed.

[23] Drought Program Participants are District 40, Quartz Hill Water District, Littlerock Creek Irrigation District, California Water Service Company, Desert Lake Community Services District, North Edwards Water District, City of Palmdale, and Palm Ranch Irrigation District (¶8.4).

two years of the Rampdown Period (2016 and 2017). Palm Ranch Irrigation District's remaining transfer water prevented Palm Ranch ID from overproducing in 2019, 2020, and 2023.

5.10 CHANGES IN USE

Annual reports are required to include a compilation of changes in use (¶18.5.18.17 of the Judgment). Changes in use have been documented through Transfers (see **Section 5.6** and **Appendix F**) and through New Point of Extraction applications (see **Section 5.11** and **Appendix H**). Also, all Parties are enjoined from changing their purpose of use of groundwater at any time without notifying the Watermaster (¶6.2).

5.11 WELL APPLICATIONS FOR NEW OR REPLACEMENT PRODUCTION WELLS

New and replacement wells drilled in the Adjudication Area of the Antelope Valley are subject to approval by the Antelope Valley Watermaster. A new well is any well that does not presently exist but is proposed to be constructed. A replacement well is a specific kind of new well that is located within 300 feet of an existing well and owned by the same Party that intends to construct the new well.

There is also an approval process for non-production wells. Non-production wells include piezometers, monitoring wells, and cathodic protection wells that will pump only minimal amounts of groundwater associated with well construction and/or groundwater sampling.

Prior to approval of a well application, the Watermaster Board must make the following findings:

- Applicant has a known right to produce groundwater under the Judgment, or qualifies as an unknown small pumper, or is a non-pumper with no pumping rights but agrees to purchase replacement water.
- Applicant with a right to produce groundwater requests a replacement well (within 300 feet of an existing well) or a new well from a new point of extraction; or applicant is a non-pumper with no pumping rights and requests a well for new production; or applicant requests a non-production well.
- Applicant's well will not cause Material Injury as defined by the Judgment and the Rules and Regulations.

The forms associated with these types of wells applications are available on the Watermaster website:

- New Production Application
- Water Conservation Form
- Replacement Well Application
- Small Pumper Qualifying Documentation
- New Point of Extraction Well Application

- Use of Production Right at a New Point of Extraction Application
- Non-Production Well Application (e.g., monitoring wells, test wells, etc.)

In 2024, the following well applications and Small Pumper Qualifying Documentations have been approved:

- 2 monitoring wells
- 1 Replacement well
- 4 New Points of Extraction
- 1 Non-Production Well
- 17 New Production wells
- 0 Small Pumper Qualifying Documentations

Information on these approved applications is listed in **Appendix H**. **Figure 25** shows the locations of all approved New Production. In 2024, 84.45 AF of New Production was approved. As of May 2024, 903.62 AF of New Production has been approved. Of this New Production, 104.38 AF was revoked in April 2025 due to non-compliance. Several applications have been rescinded by the applicant because the well did not get drilled or because the New Production was temporary.

5.12 WASTEWATER AND RECYCLED WATER

Antelope Valley area wastewater is treated at LACSD's Palmdale and Lancaster WRPs, EAFB Air Force Research Laboratory Treatment Plant and the Main Base WWTP, and the RCSD's WWTP. Quantities of effluent and reuse for 2024 are tabulated in **Appendix J**.

1. Production Right total includes transfers that RCSD received from Exhibit 4 Parties (eSolar Inc./Red Dawn Suntower LLC (150 AFY), and for 2022: Nick and Janet Van Dam (350 AFY) and Richard Miner (999 AFY)).
2. Unused Federal Reserve Right for Use in 2022 values were revised in December 2022 (all increased) to reflect an error in 2021 reported production identified in an Edwards AFB internal audit.
Future tables may include rights to Stored Water.
3. In 2024 Palmdale Water District identified that the 2020 Annual Production had under-reported by 9.46 AF. Carry Over Water values have been updated to reflect this.

1. Pursuant to Section 5.1.8 of the Judgment, Antelope Valley Joint Union High School District has an additional 29 AF of Production for use on its athletic fields and other public spaces. When recycled water becomes available to Quartz Hill High School at a price equal to or less than the lowest cost of any of the following: Replacement Obligation, Replacement Water, or other
2. William Fisher Memorial Water Company has one well that is outside of the Adjudicated Area and consequently, its production will not be shown in annual reports.
3. See Table B-5 for additional rights to produce groundwater. Note that some Exhibit 4 Parties are also listed on the Small Pumper list.
4. V Lions has a reoccurring transfer from County Sanitation District #14 of Los Angeles County for 2,850 AF for the 2021-2028 time period.
5. Past Carry Over volumes have been changed since the 2022 Annual Report after receiving production reports from an additional well
6. Carry Over for WDS CA II was corrected in 2024 to reflect the 570.3 AF retained by the Eugene Nebeker Trust
7. Past Carry Over volumes have been changed since the 2023 Annual Report to fix accounting errors
8. NR indicates "Not Reported." If 2022 Production was not reported, Carry Over water available for use in 2023 is treated as zero in water accounting calculations. If 2023 Production was not reported, 2023-2024 water accounting cannot be calculated.

1. United States Production Right to Carry Over for use in the next year is the Unused Federal Reserved Water Right available to 9 public water suppliers for use the next year as per the Judgment.
2. Pursuant to Section 5.1.8 of the Judgment, Antelope Valley Joint Union High School District has an additional 29 AF of Production for use on its athletic fields and other public spaces. When recycled water becomes available to Quartz Hill High School at a price equal to or less than the lowest cost of any of the following: Replacement
3. Phelan Pinon Hills CSD can produce up to 1,200 AFY and its Replacement Obligation is equal to its total groundwater production as per Judgment Section 6.4.1.2.

Future tables may include rights to Stored Water.

NA = Not applicable since no pumping

1. Yes indicates within AVEK, PWD, or LCID service area unless noted otherwise. A No indicates not within AVEK, PWD, or LCID service areas.

Table B-5 Parties with Multiple Rights to Produce

Last updated 1/29/2025

Party	
Exhibit 3 Parties	**Production Right (AF)**
Rosamond Community Services District	
Original Production Right	404.42
Transfer from eSolar Inc.; Red Dawn Suntower LLC - Exhibit 4 (2016)	150.00
Transfer from Richard Miner - Exhibit 4 (Jan 2022)	999.00
Transfer from Nick and Janet Van Dam - Exhibit 4 (Feb 2022)	350.00
Transfer from Radcast Investments- Exhibit 4 (June 2022)	232.56
Total	**2,135.98**

Exhibit 4 Parties	**Production Right (AF)**
40th Street East Water Group is a New Production Party (2020) and an Exhibit 4 Party (as of Dec 2021). All production reporting will now occur with its Exhibit 4 rights.	
New Production: granted up to 37 AFY (May 2020)	NA
Exhibit 4 *: Transfer from Craig & Marta Van Dam (Dec 2021) (original Van Dam Family Trust - 1996; High Desert Dairy Production Right)*	1.00
Antelope Valley Country Club	
Small Pumper: 3 AFY (Cannot Carry Over)	3.00
Exhibit 4: *Transfer from Van Dam, Craig and Marta. Can Carry over IWRF after February 2023*	1.00
Total	**4.00**
Antelope Valley-East Kern Water Agency (AVEK)	
Original Production Right	3,550.00
Transfer from Healy: Jane Healy and Healy Enterprises Inc (Jan 2022)	700.00
Total	**4,250.00**
Antelope Valley Joint Union High School District	
Original Production Right	41.00
For use on athletic fields and other public spaces until recycled water becomes available [1]	29.00
Total	**70.00**
Calandri Farms	
Transfers from Craig and Marta Van Dam (since 2020); 162.5 AFY is amount available as of December 2024	162.50
Transfer from Calandri Water Company (Dec 2022)	444.00

TODD GROUNDWATER
Watermaster Engineer

Total	**606.50**
City of Lancaster	
Original Production Right: Additional Rights to produce at Soccer Complex when recycled water is not available	500.00
Transfer from County Sanitation District of Los Angeles No. 14 (Exhibit 4; no point of extraction identified)	50.00
Total	**550.00**
Diamond Farming/Crystal Organic LLC/Grimmway/Lapis	
Original Production Right	1,986.00
Transfer from FS Land Holding Company, LLC (2018) [Original Landinv Inc Production Right]	600.00
Total	**2,586.00**
Granite Construction Company	
Original Production Right	126.00
Granite Construction Co (Big Rock Facility) (Split after lease ended in 2022, all rights transferred to Big Rock Facility March 2023)	117.00
Total	**243.00**
Lane Family Trust	
Original Production Right	773.00
Lane Family Trust (Little Rock Sand and Gravel, Co.) (Split after lease ended in 2022)	117.00
Total	**890.00**
Selak, Steve has two separate Production Rights that are not the same nor interchangeable.	
Steven J. Selak Consolidated Trust (split of Selak: Lilia Mabel Selak; Barbara Aznarez Decd Trust and Mabel Selak Trust rights (July 2020))	75.00
Steven and Christine Selak Trust (transfer from Siebert: Jeffrey and Nancee Siebert (July 2018))	1.00
Total	**76.00**
RTS Orchards	
RTS Orchards, property sale from H&N Development Co. (January 2022); 807 (January 2025)	807
RTS Orchards, transfer from R and M Ranch, (June 2023)	686
Total	**1,493.00**
US Solar	
Original Production Right	0.00
Transfer from FS Land Holding Company, LLC (2020) [Original Landinv Inc Production Right]	136.44
Transfer from FS Land Holding Company, LLC (2020) [Original Rosamond Ranch Production Right]	588.00

Total	**724.44**
Van Dam, Gary	
Original Production Rights affiliated with Sonrise Ranch, LLC	0.00
Van Dam, Gary and Sonrise Ranch (2020 (split of Van Dam Family Trust - 1996; High Desert Dairy rights)	466.00
Total	**466.00**
Van Dam, Craig and Marta	
Van Dam: Craig and Marta: 610 AFY (2018); 607 AFY (2020); 482 (2021) {split of Van Dam: Craig Van Dam, Marta Van Dam, Nick Van Dam, Janet Van Dam rights and subsequent transfers); 481 AFY (2023); 480 AFY (2024); 313.5 (Two transfers, December 2024)	313.5
	464
Total	**777.50**
Van Dam, Nick and Janet	
Van Dam, Nick and Janet: 30 AFY (2018) {split of Van Dam: Craig Van Dam, Marta Van Dam, Nick Van Dam, Janet Van Dam Production Rights)	30
Van Dam, Nick and Janet: 466 (2020); 116 AFY (Feb 2022) (split of Van Dam Family Trust - 1996; High Desert Dairy and subsequent transfers)	116
Total	**146.00**
WDS California II, LLC	
Original Production Right	1,159.00
Transfer from Nebeker: Eugene B. Nebeker (2021)	1,775.00
Transfer from Copa De Oro Land Company (Jan 2020)	315.00
Total	**3,249.00**
White Fence Farms MWC No. 3 has two separate rights that are of different classes and not combinable	
Exhibit 4: *Transfer from Craig and Marta Van Dam (Oct 2021) (original Van Dam Family Trust - 1996; High Desert Dairy Production Right)*	1.00
Non-Stipulating Right: White Fence Farms MWC No. 3	4.00
Total	**5.00**

Note: some Exhibit 4 Parties are also listed on the Small Pumper list.

1. Pursuant to Section 5.1.8 of the Judgment, Antelope Valley Joint Union High School District has an additional 29 AF of Production for use on its athletic fields and other public spaces. When recycled water becomes available to Quartz Hill High School at a price equal to or less than the lowest cost of any of the following: Replacement Obligation, Replacement Water, or other water that is delivered to AVJUHSD at Quartz Hill High School, AVJUHSD will stop producing the 29 AF groundwater and use recycled water. This 29 AF is subtracted from their reported annual Production shown on the Exhibit 4 Overlying Producers Water Accounting table.

Imported Water Tables

C-1. Imported Water, 2024

C-2. AVEK Storage and Recovery Locations, 2024

C-3. Other Storage and Recovery Locations, 2024

C-4 RCSD Storage and Recovery, 2024

Appendix C-1 Imported Water, 2024

Importer of State Water Project (SWP) Water[1]	2024 Imported Water (AF)
Antelope Valley-East Kern Water Agency (AVEK)	55,647.00
Palmdale Water District (PWD)	9,220.00
Littlerock Creek Irrigation District (LCID)	2,395.00
Total Imported SWP Water	67,262.00

AVEK Use of Imported Water (inside Adjudicated Area)	2024 Imported Water (AF)
SWP Water Deliveries to Treatment Plants	
For Customer Use Inside the Adjudicated Area	28,468.18
For Customer Use Outside the Adjudicated Area	1,078.53
SWP (Untreated) Water Deliveries to AVEK Other Locations	
For AVEK Customer Use Inside the Adjudicated Area	470.15
For AVEK Customer Use Outside the Adjudicated Area	261.09
AVEK Storage (Spreading) to High Desert Water Bank	0.00
AVEK Storage (Spreading) to Westside Water Bank	22,525.00
AVEK Storage (Spreading) to Eastside Water Bank	1,220.00
AVEK Storage (Spreading) to Littlerock Creek	0.00
AVEK Storage (Spreading) to Big Rock Creek	0.00
AVEK Storage (Spreading) to Upper Amargosa Creek	1,244.00
Storage (Spreading) - Willow Springs Water Bank[2]	0.00
Storage (Spreading) - Tejon Ranch Co. Water Bank[2]	0.00
Total SWP Water Deliveries Unaccounted-for Water[3]	380.05
Total	55,647.00

PWD Use of Imported Water	
SWP Entering Lake Palmdale for Customer Use	7,220.00
SWP Spread at Big Rock Creek	0.00
SWP Spread at Little Rock Creek	2,000.00
Total	9,220.00

LCID Use of Imported Water	2024 Imported Water (AF)
SWP Spread at LCID Recharge Site	0.00
SWP Spread at Big Rock Creek	0.00
SWP Spread at Little Rock Creek	2,395.00
Total	2,395.00

1. Does not include MWDSC water stored at High Desert Water Bank for use outside of Basin. This is reported in C-2.

2. Amount of imported water delivered to non-AVEK facilities.

3. Unaccounted-for water could include losses/gains due to inaccuracies in meters, measurements, timing and record keeping, as well as operational uses and pilot testing, losses due to repair, maintenance, evaporation & leakage.

Appendix C-2 AVEK Storage and Recovery Locations, 2024

7/15/2025

Antelope Valley-East Kern Water Agency (AVEK) Storage and Recovery Locations	Acre-feet
High Desert Water Bank-AVEK Water	
Total Recoverable Stored Water at end of 2023	6,378.89
Amount Spread in 2024	0.00
Storage Loss Factor[1]	10%
Additional Amount of Water Stored in 2024 (after applying 10% loss factor)	-
Amount Recovered for use inside Adjudicated Area	0.00
Total Amount Recovered for use outside Adjudicated Area	0.00
Amount Recovered Unaccounted-for Water[2]	0.00
Total Amount of Stored Water Recovered in 2024	0.00

Appendix C-2 AVEK Storage and Recovery Locations, 2024

7/15/2025

Total of Recoverable Stored Water at end of 2024	**-1,460.92**

1. Storage loss factors may not yet have been verified by the Watermaster Engineer.

2. Unaccounted-for water could include losses/gains due to inaccuracies in meters, measurements, timing and record keeping, as well as operational uses and pilot testing, losses due to repair, maintenance, evaporation & leakage.

3. The below AVEK RWA deductions (2023 & 2024) are included in this 2024 Annual Report. Starting with the 2024 report, AVEK will report that year's RWA amounts based on Agency board approval in the successive year. Total AVEK 2024 RWA Amounts:
UACP: 227.20 AF(2023) +266.00 AF (2023) = 493.20 AF
BRC: 107.60 AF (2023) + 0.000 AF (2024) = 107.60 AF
LRC: 0.00 AF (2023) + 73.64 AF (2024) = 73.64 AF
WWB: 119.40 AF (2023) + Credit of 58.01 AF (2024. Due to clerical error) = 61.39 AF

4. Total Amount of Stored Water Recovered at AVEK Westside Water Bank includes production from AVEK "EW" (potable) and "RG" (non-potable) groundwater wells.

AVEK Water Agency TOTAL[7]	1,240.36
AVEK Water Agency	*815.40*

City of Palmdale	*498.60*
Total of Recoverable Stored Water at end of 2024	**12,347.11**

1. Storage loss factors may not yet have been verified by the Watermaster Engineer.

2. Unaccounted-for water could include losses/gains due to inaccuracies in meters, measurements, and record keeping, as well as operational uses and losses due to repair, maintenance, evaporation, and leakage.

3. Upper Amargosa Creek Flood Control, Recharge, and Habitat Restoration Project was completed in 2019. Participating Project parties are the City of Palmdale, PWD, LACWW District 40, and AVEK. A Storage Agreement was approved at the February 24, 2021 Antelope Valley Watermaster Board meeting. No recovery of water has occurred to date, and will be based on future agreement between Project parties. The current distribution of water by party is listed in this table.

4. The below AVEK RWA deductions (2023 & 2024) are included in this 2024 Annual Report. Starting with the 2024 report, AVEK will report that year's RWA amounts based on Agency board approval in the successive year. Total AVEK 2024 RWA Amounts:
UACP: 227.20 AF(2023) +266.00 AF (2023) = 493.20 AF

5. Big Rock Creek recharge site is an AV State Water Contractors Association (AVSWCA) preexisting project proposed for recharge prior to 2002. AVSWCA members are AVEK, PWD, and Littlerock Creek ID. Development of this site by the AVSWCA as a long-term project will require further approval. The current distribution of water by party is listed in this table.

6. Amount includes 2023 AVEK RWA deduction only. AVEK Board approved a 107.6 AF deduction in January 2024 included in this 2024 Annual Report. No 2024 RWA deductions were made.

7. Portion of AVEK storage is for the benefit of the City of Palmdale. City of Palmdale does not have a permanent Production Right or New Production volume, so their total storage volume is not shown on Table B-6.

8. In response to the 2023 Calif. Governor's Executive Order to fast-track groundwater recharge projects in the State, the AV State Water Contractors Association (AVSWCA) developed the Littlerock Creek Pilot Recharge Site. AVSWCA members are AVEK, PWD, and Littlerock Creek ID. AVSWCA is seeking further approval to develop this site as a long-term project.

1. Imported water use data from AVEK with the exception of PWD and LCID.
2. Some water use types were uncertain and assigned a likely type.
3. As per Judgment (Section 5.2.2) Boron CSD has the right to produce Imported Water Return Flows, up to 78 AFY, based on the applicable percentage multiplied by the average amount of Imported Water used by Boron CSD outside the Basin, but within its service area in the preceding five Year period (not including Imported Stored Water in the Basin) without having to establish that the Imported Water Return Flows augment the Basin Groundwater supply. This cap was erroneously not initiated in 2020 and 2021 but has been initiated since then.
4. Imported Water Deliveries include a portion of water AVEK recovered from banking in previous years.

5. Past Annual Reports incorrectly counted unrecovered banked water towards the Imported Water Use in Appendix D. Values from previous years have been adjusted for Tejon Ranch Co., PWD, and LCID. Stored water will count towards IWRF credits once it has been recovered.

6. PWD imported 7,200 AF of water directly into Lake Palmdale for customer use in 2024

7. These eight Parties are not permitted to Carry Over IWRFs as per Judgment ¶ 15; R&Rs §§ 8.c, 8.d.ii. 8.d.v) because they are not Exhibit 3, Exhibit 4, or State of California Parties.

8. For 2011-2019, AVEK's invoiced deliveries are shown and includes AVEK's 0.5 AF/mo min. After 2019, AVEK's actual deliveries are shown and may vary from AVEK's invoiced amounts which include the 0.5 AF/mo min. Between 2019 to 2020, AVEK transitioned to a new meter/billing software that showed both actual usage and invoiced billing usage and automatically included the 0.5 AF/mo min. 2020 was their first year in being able to show actual deliveries that were less than 0.5 AF/month.

9. In January 2023 Antelope Valley Country Club became an Exhibit 4 Party and can Carry Over IWRFs accrued after January 2023. They cannot Carry Over IWRFs accrued in 2022.

Appendix E

Replacement Obligations

Appendix E Replacement Obligations
(See Appendix B-4 for Replacement Obligations for New Production Parties)

last updated 6/3/2025

Appendix E summarizes Replacement Obligations as of June 2022 and does not include Replacement Obligations for New Production Parties prior to 2022. Those are listed in Appendix B-4 or in previous Annual Reports. Appendix E also does not include Exhibits 3 or 4 Parties that have used transfers for their Replacement Obligations. Note that not all Parties have reported production and there are other entities that have potential Replacement Obligations. When identified, additional entities with Replacement Obligations will be added to Appendix E.

Producer	Producer Status	2018 (plus 2016 and 2017 for those with RWAs)		
		Groundwater Production Subject to a Replacement Obligation (AF)	Status of Payment	Status of Recharge
60th Street Association Water System	Exhibit 4	4.66	Paid	Paid
Antelope Valley Joint Union High School District	Exhibit 4	58.54	Paid	Completed in 2020
Antelope Valley Resource Conservation District	Not a Party to the Judgment. In process of intervening	2016=38.16 2017=25.39 2018=28.92	Pending-in process of intervening	Pending
Banuk, Ron	Small Pumper granted New Production in 2020 for two years: 2020 and 2021[1]	0.13	Paid	Completed in early 2022
Brittner Trust, Glen Brittner, Trustee	Exhibit 4	6.88	Paid	Completed in early 2022
Clan Keith Real Estate Investments, LLC dba Leisure Lake Mobile Estates	Non-Stipulating Party	18.51	Paid	Completed in 2020
Joshua Acres MWC	Defaulted Party	2016=14.00 2017=14.00 2018=14.00	Paid	Completed in 2024
La Cosepa	No previous Production Rights and granted New Production in 2018	2017=16.5	Paid	Completed in mid 2022
New Goldensands Investment (Miracle Improvement Corporation dba Golden Sands Mobile Home Park/Trailer Park)	Exhibit 4	17.67	Paid	Completed in 2020
Phelan Pinon Hills CSD	Has no Production Rights but can pump up to 1,200 AFY (Well #14) and pay a Replacement Water Assessment	2016=770.63 2017=385.18 2018=176.83	Paid	Completed in mid 2022
Piute Mutual Water Company	Defaulted Party granted New Production in 2020[1]	2016=14.29 2017=9.88 2018=9.14	Pending	Pending
Ritter, Mark	Small Pumper	2016 - 2018=791	Paid	Completed in 2020
sPower	Not a Party to the Judgment	151.74	Paid	Completed in 2020
Tapia Brothers, Inc.	Small Pumper	331	Paid	Completed in early 2022
Vulcan Materials Co., Vulcan Lands Inc., Consolidated Rock Products Co., Calmat Lands, Co., Allied Concrete & Materials	Exhibit 4	54.65	Paid	Completed in 2020
Zamrzla, Johnny and Johnny Lee	Small Pumper	641	Pending	Pending

1. Granted New Production in 2020. See Table B-4 (New Production Water Accounting) for Replacement Obligations for years after granted New Production. Became Exhibit 4 Party in December 2021 (see Table B-2).

Producer	Producer Status	2019		
		Groundwater Production Subject to a Replacement Obligation (AF)	Status of Payment	Status of Recharge
40th Street East Water Group (previously called 40th St. MWC)	Defaulted Party granted New Production in 2020[1]	12.56	Combination of transfer and payment. Remaining Transfer water (6.44 AF) was used to partially offset its 2019 Replacement Obligation. Paid for remaining 6.12 AF.	Completed in early 2024
60th Street Association Water System	Exhibit 4	2.62	Paid	Pending
Antelope Valley Joint Union High School District	Exhibit 4	47.38	Paid	Completed in early 2022
Antelope Valley Resource Conservation District	Not a Party to the Judgment. In process of intervening	9.62	Pending-in process of intervening	Pending
Banuk, Ron	Small Pumper granted New Production in 2020 for two years: 2020 and 2021[1]	81.94	Paid	Completed in early 2022
Brittner Trust, Glen Brittner, Trustee	Exhibit 4	11.00	Paid	Pending

Appendix G

Storage Agreements

Appendix G Storage Agreements

Party	Description and Date Approved
Upper Amargosa Creek Recharge Project (Project Partners: City of Palmdale, AVEK, Palmdale Water District, and Los Angeles County Waterworks District 40)	The Upper Amargosa Creek Flood Control, Recharge, and Habitat Restoration Project (Project) was completed in late 2019 to provide groundwater recharge to the Antelope Valley Groundwater Basin, water banking for the Project Partners, flood control and a nature park for the City of Palmdale. State Water Project (SWP) water will be delivered to 11 recharge basins covering approximately 16 acres on the north side of Amargosa Creek near the intersection of Elizabeth Lake Road and 25th St West. The average and maximum annual recharge associated with the Project is estimated at 6,400 acre-feet per year (AFY) and 9,400 AFY, respectively, based on aquifer properties and anticipated Project operations. The Storage Agreement was approved at the February 24, 2021 Antelope Valley Watermaster Board meeting.
Littlerock Creek Irrigation District	LCID completed an upgrade to its existing State Water Project water recharge facility: (1) recharging will be monitored throughout the calendar year on a monthly basis during operation; (2) banking delivery rates will generally range from 0.5-4 cfs (1-8 AF/day); (3) estimated recharge will generally be a minimum of 400 acre-feet per year; and (4) the 1.25-acre recharge basin can hold approximately 7.5 acre-feet of water at one time. The Storage Agreement was approved at the February 26, 2020 Antelope Valley Watermaster Board meeting.
Rosamond Community Services District	RCSD is upgrading its wastewater treatment facility to treat up to 1.27 million gallons per day (mgd) to acceptable levels for disposal by percolation to groundwater: (1) continuous average flow of 1.20 mgd to percolation ponds 24 hours a day 365 days a year; (2) expected infiltration rate for the percolation ponds is approximately 0.5 feet per day; and (3) expected monthly and annual recharge of 112 AF and 1,343 AF, respectively. The Storage Agreement was approved at the April 22, 2020 Antelope Valley Watermaster Board meeting.
Antelope Valley East Kern (AVEK) - High Desert Water Bank	The High Desert Water Bank (HDWB) project (Project) is a groundwater recharge, storage, and recovery program in the West Antelope Subarea, in LA County. This is a partnership between AVEK and Metropolitan Water District of Southern California. The Project aims to recharge the Antelope Valley Groundwater Basin with about 70,000 acre-feet per year (AFY) of State Water Project (SWP) water conveyed through the California Aqueduct during wet weather years and recover up to 70,000 AFY during dry or critical weather years. The Project has a maximum anticipated storage volume of 280,000 acre-feet (AF). The Storage Agreement was approved during the September 27, 2023 Watermaster Board Meeting.

Appendix J

Wastewater and Recycled Water, 2024

Appendix J Wastewater and Recycled Water, 2024

Plant	Treated Plant Effluent (AF)	Reuse of Treated Wastewater (AF)	
Lancaster WRP[1]	14,288	13,977	
Palmdale WRP[2]	9,386	8,553	
Plant	**Treated Plant Effluent (AF)**	**To Percolation Test Basin (AF)**	**To Evaporation Ponds (AF)**
RCSD	1,160	1,160	0.0
Plant	**Total Flow to Plant (AF)**	**Irrigation (AF)**	**To Evaporation Ponds (AF)**
Edward AFB-Main Plant[3]	418.7	151.7	267.0
Edwards AFB-AFRL[4]	13.5	0	13.5

1.All the effluent is recycled. Effluent totals may not match reuse amounts because of changes in storage, losses due to evaporation, and metering differences. Recycled water produced by the Lancaster WRP was delivered to three main reuse sites: Piute Ponds (also known as Paiute Ponds), Apollo Community Regional Park, and the Eastern Agricultural Site. Recycled water was also delivered to the City of Lancaster's Division Street Corridor Recycled Water Project for municipal uses in the Antelope Valley and a small portion was provided for Lancaster WRP in-plant uses. Four lined reservoirs at the Lancaster WRP provide seasonal storage of recycled water.

2. All the effluent is recycled. Effluent totals may not match reuse amounts because of changes in storage, losses due to evaporation, and metering differences. Recycled water produced by the Palmdale WRP was used for agricultural purposes at the Palmdale Agricultural Site, municipal and industrial uses by Palmdale Recycled Water Authority recycled water customers, and landscape and other in-plant uses at the Palmdale WRP.

3. All the effluent is recycled. Plant inflow may not match reuse amounts because of changes in storage, losses due to evaporation, and metering differences.

4. Totals do not include potential losses but only the amounts sent to evaporation ponds.

Watermaster Financial Budgets

K-1. Approved Administrative Budget, 2024

K-2. Financial Audit, 2024

RESOLUTION NO. R-24-54

APPROVING ANTELOPE VALLEY WATERMASTER BUDGET AND ADMINISTRATIVE ASSESSMENT FOR CALENDAR YEAR 2025

WHEREAS, the Antelope Valley Watermaster, formed by the Antelope Valley Groundwater Cases Final Judgment ("Judgment"), Santa Clara Case No. 1-05-CV-049053 signed December 23, 2015, is to administer the Judgment; and

WHEREAS, said Judgment provides for the Formation of a Watermaster to administer the judgment; and

WHEREAS, said Judgment provides for the Formulation and Adoption of a budget and Administrative Assessment for the Antelope Valley Watermaster and;

NOW, THEREFORE, BE IT RESOLVED, that the Representatives of the Antelope Valley Watermaster hereby approve:

1. 2025 Budgeted Expenses in the amount of $979,810 per attached Exhibit "A."
2. 2025 Administration Assessment of $9.50 per acre-foot for Fixed and Variable Production.
3. Approval of the 2025 Budget and 2025 Administrative Assessment is not precedent setting.

I certify that this is a true copy of Resolution No. R-24-54 as passed by the Board of Directors of the Antelope Valley Watermaster at its meeting held December 10, 2024, in Palmdale, California.

Date: 12/10/24

Independent Auditor's Report

Board of Directors
Antelope Valley Watermaster
Palmdale, California

Report on the Audit of the Financial Statements

We have audited the accompanying financial statements of the Antelope Valley Watermaster (Watermaster), which comprises the statements of net position as of December 31, 2024 and 2023, and the related statements of revenues, expenses, and changes in net position for the year then ended, and the related notes to the financial statements, which collectively comprise the Watermaster's basic financial statements as listed in the table of contents.

In our opinion, the financial statements referred to above present fairly, in all material respects, the respective financial position of the Antelope Valley Watermaster as of December 31, 2024 and 2023, and the respective changes in net position, and, where applicable, cash flows thereof for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinions

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS) and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States, and the State Controller's Minimum Audit Requirements for California Special Districts. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Watermaster, and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Watermaster's ability to continue as a going concern for twelve months beyond the financial statement date, including any currently known information that may raise substantial doubt shortly thereafter.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinions. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with generally accepted auditing standards will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with generally accepted auditing standards, we:

- exercise professional judgment and maintain professional skepticism throughout the audit.
- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Watermaster's internal control. Accordingly, no such opinion is expressed.
- evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Watermaster's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Required Supplementary Information

Accounting principles generally accepted in the United States of America require that the management's discussion and analysis on pages 4 through 6, be presented to supplement the basic financial statements. Such information is the responsibility of management and, although not a part of the basic financial statements, is required by the Governmental Accounting Standards Board, who considers it to be an essential part of financial reporting for placing the basic financial statements in an appropriate operational, economic, or historical context. We have applied certain limited procedures to the required supplementary information in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We do not express an opinion or provide any assurance on the information because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

Other Reporting Required by *Government Auditing Standards*

In accordance with *Government Auditing Standards*, we have also issued our report dated May 28, 2025, on our consideration of the Watermaster's internal control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the Watermaster's internal control over financial reporting and compliance. This report can be found on pages 17 and 18.

Cypress, California
May 28, 2025

The following Management's Discussion and Analysis (MD&A) of activities and financial performance of the Antelope Valley Watermaster (Watermaster) provides an introduction to the financial statements of the Watermaster for the year ended December 31, 2024 and 2023. We encourage readers to consider the information presented here with additional information that we have furnished in the accompanying basic financial statements and related notes, which follow this section.

2024 Financial Highlights

- In 2024, the Watermaster's net position increased 9.74% or $137,215 to $1,546,533.
- In 2024, the Watermaster's total revenues increased 20.20% or $215,179 to $1,280,604.
- In 2024, the Watermaster's total expenses increased 15.76% or $155,647 to $1,143,389.

Using This Financial Report

This annual report consists of a series of financial statements. The Statements of Net Position, Statements of Revenues, Expenses, and Changes in Net Position, and Statements of Cash Flows provide information about the activities and performance of the Watermaster using accounting methods similar to those used by private sector companies.

The Statements of Net Position include all of the Watermaster's investments in resources (assets), deferred outflows of resources, obligations to creditors (liabilities), and deferred inflows of resources. They also provide the basis for evaluating the results of operations, evaluating the capital structure of the Watermaster, and assessing the liquidity and financial flexibility of the Watermaster. All of the current year's revenues and expenses are accounted for in the Statements of Revenues, Expenses, and Changes in Net Position. These statements measure the success of the Watermaster's operations over the past year and can be used to determine if the Watermaster has successfully recovered all of its costs through its rates and other charges. In addition to tracking cost recovery performance, these statements can also be used to evaluate the results of operations and creditworthiness. The final required financial statements are the Statements of Cash Flows, which provide information about the Watermaster's cash receipts and cash payments during the reporting period. The Statements of Cash Flows report cash receipts, cash payments, and net changes in cash resulting from operations, investing, non-capital financing, and capital and related financing activities, and provides answers to such questions as where did cash come from, what was cash used for, and what was the change in cash balance during the reporting period.

Financial Analysis of the Watermaster

One of the most important questions asked about the Watermaster's finances is, "Is the Watermaster better off or worse off as a result of this year's activities?" The Statements of Net Position and the Statements of Revenues, Expenses, and Changes in Net Position report information about the Watermaster in a way that helps answer this question. These statements include all assets, deferred outflows of resources, liabilities, and deferred inflows of resources using the *accrual basis of accounting*, which is similar to the accounting method used by most private sector companies. All of the current year's revenues and expenses are taken into account regardless of when the cash is received or paid.

These two statements report the Watermaster's *net position* and changes in them. You can think of the Watermaster's net position – the difference between assets and deferred outflows of resources less liabilities and deferred inflows of resources – as one way to measure the Watermaster's financial health, or *financial position*. Over time, *increases or decreases* in the Watermaster's net position are one indicator of whether its *financial health* is improving or deteriorating. However, one will need to consider other non-financial factors such as changes in economic conditions, population growth, zoning, and new or changed government legislation, such as changes in Federal and State water quality standards.

Notes to the Basic Financial Statements

The notes to the basic financial statements provide additional information that is essential to a full understanding of the data provided in the basic financial statements. The notes to the basic financial statements can be found on pages 10 through 16.

Statements of Net Position

Condensed Statements of Net Position

	2024	2023	Change
Assets:			
Current assets	$ 1,625,362	1,544,618	80,744
Total assets	1,625,362	1,544,618	80,744
Liabilities:			
Current liabilities	78,829	135,300	(56,471)
Total liabilities	78,829	135,300	(56,471)
Net position:			
Restricted	1,268,836	1,355,378	(86,542)
Unrestricted	277,697	53,940	223,757
Total net position	$ 1,546,533	1,409,318	137,215

As noted earlier, net position may serve over time as a useful indicator of financial position. In the case of the Watermaster, assets exceeded liabilities by $1,546,533 and $1,409,318, as of December 31, 2024 and 2023, respectively.

At the end of 2024 and 2023, the Watermaster reflected a positive balance in its unrestricted net position of $277,697 and $53,940, respectively, that may be utilized in future years. See note 3 for further discussion.

Statements of Revenues, Expenses, and Changes in Net Position

Condensed Statements of Revenues, Expenses, and Changes in Net Position

	2024	2023	Change
Revenues:			
Operating revenues	$ 1,280,496	1,065,108	215,388
Non-operating revenues	108	317	(209)
Total revenues	1,280,604	1,065,425	215,179
Expenses:			
Operating expenses	1,143,389	987,742	155,647
Total expenses	1,143,389	987,742	155,647
Change in net position	137,215	77,683	59,532
Net position, beginning of year	1,409,318	1,331,635	77,683
Net position, end of year	$ 1,546,533	1,409,318	137,215

Statements of Revenues, Expenses, and Changes in Net Position, continued

In 2024, net position increased 9.74% or $137,215 to $1,546,533, as a result of ongoing operations.

In 2024, total revenues increased 20.20% or $215,179 to $1,280,604, primarily due to increases of $141,209 in replacement water assessments, $59,120 in imported water return flow, $21,023 in variable assessments, and $9,191 in fixed production rights; which were offset by a decrease of $15,155 in application and other billable fees.

In 2024, total expenses increased 15.76% or $155,647 to $1,143,389, primarily due to increases of $378,189 in replacement water purchase, and $16,748 in watermaster engineering expenses; which were offset by decreases of $149,602 in legal and professional fees, and $88,361 in contracted administrative services.

Conditions Affecting Current Financial Position

Management is unaware of any other conditions which could have a significant impact on the Watermaster's current financial position, net position, or operating results based on past, present, and future events.

Requests for Information

This financial report is designed to provide the Watermaster's present users, including funding sources, customers, stakeholders, and other interested parties with a general overview of the Watermaster's finances and to demonstrate the Watermaster's accountability with an overview of the Watermaster's financial operations and financial condition. Should the reader have questions regarding the information included in this report or wish to request additional financial information, please contact the Watermaster's Contracted Administrator, Antelope Valley-East Kern Water Agency, at Antelope Valley Watermaster, 5022 West Avenue N Suite 102, Box 195, Palmdale, CA 93551 or info@avwatermaster.net.

Accounts receivable		5,904	41,307
Increase (decrease) in liabilities:			
Accounts payable and accrued expenses		(56,471)	7,542
Total adjustments		(50,567)	48,849
Net cash provided by operating activities	$	86,540	126,215

See accompanying notes to the basic financial statements

(1) Reporting Entity and Summary of Significant Accounting Policies

A. Organization and Operations of the Reporting Entity

The Antelope Valley Watermaster (Watermaster) was formed by the Antelope Valley Groundwater Cases Final Judgment Santa Clara Case No. 1-05-CV-049053 signed on December 23, 2015. The Watermaster's primary duty is to administer a Judgment that has the goal of protecting the sustainable use of the Antelope Valley Groundwater Basin (Basin) as a source of groundwater supply. The Basin is located in the western Mojave Desert – it encompasses 1,580 square miles in Los Angeles, Kern, and San Bernardino Counties. Approximately two-thirds of the Basin lies in Los Angeles County, with small portions extending into San Bernardino County, and the remainder in southeastern Kern County.

To administer the Judgment, the Court directed appointment of the Watermaster (a five-member board). In 2016, the Watermaster Board and an Advisory Committee were formed. The Board finalized the hiring of Todd Groundwater as Watermaster Engineer (required by the Judgment) in April 2017 to provide hydrogeological and technical analyses and to guide administrative functions to fulfill the Judgment.

The court-appointed Watermaster Board is made up of five members: One representative from the Antelope Valley East Kern Water Agency; one representative from the Los Angeles County Waterworks District No. 40; one representative from a public water supplier selected by various government districts; and two landowner representatives (exclusive of public agencies and members of the Non-Pumper and small pumper class). The Watermaster normally conducts monthly general meetings of the Board which are held on the fourth Wednesday of the month.

B. Basis of Accounting and Measurement Focus

The Watermaster reports its activities as an enterprise fund, which is used to account for operations that are financed and operated in a manner similar to a private business enterprise, where the intent of the Watermaster is that the cost of administering the Judgment on a continuing basis be financed or recovered primarily through various assessments. Revenues and expenses are recognized on the full accrual basis of accounting. Revenues are recognized in the accounting period in which they are earned, and expenses are recognized in the period incurred, regardless of when the related cash flows take place.

Operating revenues and expenses result from exchange transactions associated with the principal activity of the Watermaster. Exchange transactions are those in which each party receives and gives up essentially equal value. Management and administration expenses are also considered operating expenses. Other revenues and expenses not included in the above categories are reported as non-operating revenues and expenses.

C. Financial Reporting

The Watermaster's basic financial statements have been prepared in conformity with accounting principles generally accepted in the United States of America (GAAP), as applied to enterprise funds. The Governmental Accounting Standards Board (GASB) is the accepted standard-setting body for establishing governmental accounting and financial reporting principles. The Watermaster solely operates as a special-purpose government which means it is only engaged in business-type activities; accordingly, activities are reported in the Watermaster's proprietary fund.

(1) Reporting Entity and Summary of Significant Accounting Policies, continued

C. Financial Reporting, continued

The Watermaster has adopted the following GASB pronouncements in the current year:

In April 2022, the GASB issued Statement No. 99 – *Omnibus 2022*. The objectives of this Statement are to enhance comparability in accounting and financial reporting and to improve the consistency of authoritative literature by addressing (1) practice issues that have been identified during implementation and application of certain GASB Statements and (2) accounting and financial reporting for financial guarantees.

The requirements of this Statement will enhance comparability in the application of accounting and financial reporting requirements and will improve the consistency of authoritative literature. Consistent authoritative literature enables governments and other stakeholders to locate and apply the correct accounting and financial reporting provisions, which improves the consistency with which such provisions are applied. The comparability of financial statements also will improve as a result of this Statement. Better consistency and comparability improve the usefulness of information for users of state and local government financial statements.

In June 2022, the GASB issued Statement No. 100 – *Accounting Changes and Error Corrections – An Amendment of GASB Statement No. 62*. The primary objective of this Statement is to enhance accounting and financial reporting requirements for accounting changes and error corrections to provide more understandable, reliable, relevant, consistent, and comparable information for making decisions or assessing accountability.

This Statement defines accounting changes as changes in accounting principles, changes in accounting estimates, and changes to or within the financial reporting entity and describes the transactions or other events that constitute those changes. As part of those descriptions, for (1) certain changes in accounting principles and (2) certain changes in accounting estimates that result from a change in measurement methodology, a new principle or methodology should be justified on the basis that it is preferable to the principle or methodology used before the change. That preferability should be based on the qualitative characteristics of financial reporting—understandability, reliability, relevance, timeliness, consistency, and comparability. This Statement also addresses corrections of errors in previously issued financial statements.

The requirements of this Statement will improve the clarity of the accounting and financial reporting requirements for accounting changes and error corrections, which will result in greater consistency in application in practice. In turn, more understandable, reliable, relevant, consistent, and comparable information will be provided to financial statement users for making decisions or assessing accountability. In addition, the display and note disclosure requirements will result in more consistent, decision useful, understandable, and comprehensive information for users about accounting changes and error corrections.

In June 2022, the GASB issued Statement No. 101 – *Compensated Absences*. The objective of this Statement is to better meet the information needs of financial statement users by updating the recognition and measurement guidance for compensated absences. That objective is achieved by aligning the recognition and measurement guidance under a unified model and by amending certain previously required disclosures.

This Statement requires that liabilities for compensated absences be recognized for (1) leave that has not been used and (2) leave that has been used but not yet paid in cash or settled through noncash means. A liability should be recognized for leave that has not been used if (a) the leave is attributable to services already rendered, (b) the leave accumulates, and (c) the leave is more likely than not to be used for time off or otherwise paid in cash or settled through noncash means.

(1) Reporting Entity and Summary of Significant Accounting Policies, continued

C. Financial Reporting, continued

Leave is attributable to services already rendered when an employee has performed the services required to earn the leave. Leave that accumulates is carried forward from the reporting period in which it is earned to a future reporting period during which it may be used for time off or otherwise paid or settled. In estimating the leave that is more likely than not to be used or otherwise paid or settled, a government should consider relevant factors such as employment policies related to compensated absences and historical information about the use or payment of compensated absences. However, leave that is more likely than not to be settled through conversion to defined benefit postemployment benefits should not be included in a liability for compensated absences.

D. Assets, Liabilities, and Net Position

1. Use of Estimates

The preparation of the basic financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets, deferred outflows of resources, liabilities, and deferred inflows of resources, and disclosures of contingent assets, deferred outflows of resources, liabilities, and deferred inflows of resources, at the date of the financial statements and the reported changes in net position during the reporting period. Actual results could differ from those estimates.

2. Cash and Cash Equivalents

All deposits of the Watermaster are made in board-designated official depositories and are secured as required by State Law. Starting in 2019, the Watermaster created a money market cash account, where restricted cash is held. The Watermaster considers all highly liquid investments with a maturity of three months or less to be cash equivalents.

3. Accounts Receivable and Allowance for Uncollectible Accounts

The Watermaster extends credit to customers in the normal course of operations. When management deems customer accounts uncollectible, the Watermaster uses the direct write-off method for those accounts. There were no direct write-offs for uncollectible accounts as of December 31, 2024 and 2023, as management believes all accounts will be collected.

4. Net Position

The financial statements utilize a net position presentation. Net position is categorized as follows:

- **Restricted** – Consists of assets that have restrictions placed upon their use by external constraints imposed either by creditors (debt covenants), grantors, contributors, or laws and regulations of other governments, or constraints imposed by law through enabling legislation.
- **Unrestricted** – Consists of the net amount of assets, deferred outflows of resources, liabilities, and deferred inflows of resources that are not included in the determination of the net investment in capital assets or restricted components of net position.

5. Water Production Assessments

Water production assessments are billed on a yearly basis and the respective revenues are recognized when earned.

6. Customer Deposits

Customer deposits consists of customer deposits held at year-end.

(1) Reporting Entity and Summary of Significant Accounting Policies, continued

D. Assets, Liabilities, and Net Position

7. Budgetary Policies

In accordance with the Judgment, the Watermaster shall prepare a proposed administrative budget for each year. The Watermaster shall hold a public hearing regarding the proposed administrative budget and adopt an administrative budget. The Watermaster's governing board is responsible for ensuring the administrative budget sets forth budgeted items and shows the allocation of the expenses amongst producers.

(2) Cash and Cash Equivalents

Cash and cash equivalents as of December 31 are classified in the accompanying financial statements as follows:

		2024	2023
Cash and cash equivalents	$	328,000	114,479
Cash and cash equivalents - restricted		373,196	500,069
Total cash and cash equivalents	$	701,196	614,548

Cash and cash equivalents as of December 31 consist of the following:

		2024	2023
Deposits held with financial institutions	$	701,196	614,548
Total cash and cash equivalents	$	701,196	614,548

Custodial Credit Risk

Custodial credit risk for *deposits* is the risk that, in the event of the failure of a depository financial institution, a government will not be able to recover its deposits, or will not be able to recover collateral securities that are in the possession of an outside party. The California Government Code and the Watermaster's investment policy do not contain legal or policy requirements that would limit the exposure to custodial credit risk for deposits or investments, other than the following provision for deposits: The California Government Code requires that a financial institution secure deposits made by state or local governmental units by pledging securities in an undivided collateral pool held by a depository regulated under state law (unless so waived by the governmental unit). The market value of the pledged securities in the collateral pool must equal at least 110% of the total amount deposited by the public agencies. Of the bank balances, up to $250,000 is federally insured and the remaining balance is collateralized in accordance with the Code; however, the collateralized securities are not held in the Watermaster's name.

(3) Net Position

Calculation of net position as of December 31 is as follows:

		2024	2023
Restricted net position:			
Cash and cash equivalents - restricted	$	373,196	500,069
Accounts receivable - restricted		895,640	855,309
Total restricted net position		1,268,836	1,355,378
Unrestricted net position		277,697	53,940
Total net position	$	1,546,533	1,409,318

(4) Risk Management

The Watermaster is exposed to various risks of loss related to torts, theft of, damage to, and destruction of assets; errors and omissions; and natural disasters. The Watermaster is a member of the Association of California Water Agencies/Joint Powers Insurance Authority (ACWA/JPIA), an intergovernmental risk sharing joint powers authority created to provide self-insurance programs for California water agencies. The purpose of the ACWA/JPIA is to arrange and administer programs of self-insured losses and to purchase excess insurance coverage.

At December 31, 2024, the Watermaster participated in the liability program of the ACWA/JPIA as follows:

- General and auto liability, public officials and employees' errors and omissions: Total risk financing self-insurance limits of $5,000,000, combined single limit at $5,000,000 per occurrence. The JPIA purchases additional excess coverage layers up to $55 million per occurrence total for general, auto and public officials liability, which increases the limits on the insurance coverage noted above.
- Settled claims have not exceeded any of the coverage amounts in any of the last three years and there were no reductions in the Watermaster's insurance coverage during the years ended December 31, 2024, 2023 and 2022. Liabilities are recorded when it is probable that a loss has been incurred and the amount of the loss can be reasonably estimated net of the respective insurance coverage. Liabilities include an amount for claims that have been incurred but not reported (IBNR). There was no IBNR claims payable as of December 31, 2024, 2023 and 2022.

(5) Governmental Accounting Standards Board Statements Issued, Not Yet Effective

The Governmental Accounting Standards Board (GASB) has issued several pronouncements prior to December 31, 2024, that has effective dates that may impact future financial presentations.

Governmental Accounting Standards Board Statement No. 102

In December 2023, the GASB issued Statement No. 102 – *Certain Risk Disclosures*. The primary objective of this Statement requires a government to assess whether a concentration or constraint makes the primary government reporting unit or other reporting units that report a liability for revenue debt vulnerable to the risk of a substantial impact. Additionally, this Statement requires a government to assess whether an event or events associated with a concentration or constraint that could cause the substantial impact to have occurred, have begun to occur, or are more likely than not to begin to occur within 12 months of the date the financial statements are issued.

The requirements of this Statement are effective for fiscal years beginning after June 15, 2024, and all reporting periods thereafter. Earlier application is encouraged.

Governmental Accounting Standards Board Statement No. 103

In April 2024, the GASB issued Statement No. 103 – *Financial Reporting Model Improvements*. The primary objective of this Statement is to improve key components of the financial reporting model to enhance effectiveness in providing information that is essential for decision making and assessing a government's accountability. Also, this Statement: (1) continues the requirement that the basic financial statements be preceded by management's discussion and analysis (MD&A), which is presented as required supplementary information (RSI); (2) describes unusual or infrequent items as transactions and other events that are either unusual in nature or infrequent in occurrence; (3) requires that the proprietary fund statement of revenues, expenses, and changes in fund net position continue to distinguish between operating and nonoperating revenues and expenses; (4) requires governments to present each major component unit separately in the reporting entity's statement of net position and statement of activities if it does not reduce the readability of the statements; and (5) requires governments to present budgetary comparison information using a single method of communication—RSI.

The requirements of this Statement are effective for fiscal years beginning after June 15, 2025, and all reporting periods thereafter. Earlier application is encouraged.

Governmental Accounting Standards Board Statement No. 104

In September 2024, the GASB issued Statement No. 104 – *Disclosure of Certain Capital Assets*. The primary objective of this Statement is to provide users of government financial statements with essential information about certain types of capital assets. This Statement establishes requirements for certain types of capital assets to be disclosed separately in the capital assets note disclosures required by Statement No. 34, *Basic Financial Statements and Management Discussion and Analysis for State and Local Governments*. Also, this Statement establishes requirements for capital assets held for sale, including additional disclosures for those capital assets. The requirements of this Statement apply to the financial statements of all state and local governments.

The requirements of this Statement are effective for fiscal years beginning after June 15, 2025, and all reporting periods thereafter. Earlier application is encouraged.

(6) Commitments and Contingencies

Grant Awards

Grant funds received by the Watermaster are subject to audit by the grantor agencies. Such audit could lead to requests for reimbursements to the grantor agencies for expenditures disallowed under terms of the grant. Management of the Watermaster believes that such disallowances, if any, would not be significant. The Watermaster has not applied for or received any grant funding for the fiscal years ending December 31, 2024 and 2023.

Litigation

In the ordinary course of operations, the Watermaster is subject to claims and litigation from outside parties. After consultation with legal counsel, the Watermaster believes the ultimate outcome of such matters, if any, will not materially affect its financial condition.

(7) Subsequent Events

Events occurring after December 31, 2024, have been evaluated for possible adjustment to the financial statements or disclosure as of May 28, 2025, which is the date the financial statements were available to be issued. The Watermaster is not aware of any further subsequent events that would require recognition or disclosure in the financial statements.

Independent Auditor's Report on Internal Controls Over Financial Reporting and on Compliance and Other Matters Based on an Audit of Financial Statements Performed in Accordance with *Government Auditing Standards*

Board of Directors
Antelope Valley Watermaster
Palmdale, California

We have audited, in accordance with the auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of the Antelope Valley Watermaster (Watermaster) as of and for the years ended December 31, 2024 and 2023, and the related notes to the financial statements, which collectively comprises the Watermaster's basic financial statements, and have issued our report thereon dated May 28, 2025.

Internal Control Over Financial Reporting

In planning and performing our audit of the financial statements, we considered the Watermaster's internal control over financial reporting (internal control) to determine the audit procedures that are appropriate in the circumstances for the purpose of expressing our opinion on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the Watermaster's internal control. Accordingly, we do not express an opinion on the effectiveness of the Watermaster's internal control.

A *deficiency in internal control* exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, misstatements on a timely basis. A *material weakness* is a deficiency, or a combination of deficiencies, in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected on a timely basis. A *significant deficiency* is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

Independent Auditor's Report on Internal Controls Over Financial Reporting And on Compliance and Other Matters Based on an Audit of Financial Statements Performed in Accordance with *Government Auditing Standards, (continued)*

Compliance and Other Matters

As part of obtaining reasonable assurance about whether the Watermaster's financial statements are free from material misstatement, we performed tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit and, accordingly, we do not express such an opinion. The results of our tests disclosed no instances of noncompliance or other matters that are required to be reported under *Government Auditing Standards*.

Purpose of this Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the Watermaster's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the Watermaster's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.

List does not include missing production reporting from a few other entities including Small Pumpers known or suspected to have produced over 3 AFY and New Production Parties before 2021. Appendix B-3 and B-4 tables provide status of annual production reporting for these other entities.

Appendix N

List of Forms

Appendix N. List of Forms

The following forms are available on the Watermaster website: https://avwatermaster.net.

Watermaster Fees and Rates:

- 2024 Fee Schedule (Applications and Agreements)
- Administrative Assessment and Replacement Water Assessment Rates

Information Request Forms:

- Request for Information
- Parcel Location Request

Reporting Forms:

- Annual Water Production Report
- Annual Water Storage and Recovery Report
- Monthly Flowmeter Reporting

Applications and Forms:

- New Production Application
- Water Conservation Form
- Replacement Well Application
- Small Pumper Qualifying Documentation
- New Point of Extraction Application
- Use of Production Right at a New Location
- Non-Production Well Application (e.g., monitoring wells, test wells, etc.)

Transfers:

- Transfer Request Form
- Transfer Bulletin Board Request Form
- Transfer Bulletin Board Withdraw Request Form

Storage Agreements:

- Storage and Recovery Agreement Template
- Draft Information for a Storage Agreement for Banking and Recovery Applications
