BOLTHOUSE FARMS, INC.'S OBJECTION TO STATEMENT OF DECISION RE

PHASE III TRIAL SUBMITTED BY LOS ANGELES COUNTY AND OTHER WATER PURVEYORS

28 ||

TO ALL PARTIES AND TO THEIR ATTORNEYS OF RECORD:

PLEASE TAKE NOTICE that pursuant to California Code of Civil Procedure, Sections and 634, BOLTHOUSE PROPERTIES, LLC and WM. BOLTHOUSE FARMS, INC. (hereinafter "Bolthouse"), hereby object to the Statement of Decision Re Phase III Trial submitted by Los Angeles County and other Water Purveyors on June 6, 2011, on the grounds that the Purveyors' Statement of Decision fails to set forth the "factual and legal basis for its decision as to each of the principal controverted issues at trial" and omits material and subsidiary issues of fact and evidence as requested in Bolthouse's Proposal Re: Content of Statement of Decision filed on May 24, 2011, incorporated herein by reference, and as clarified on "Exhibit A" attached hereto, and on the grounds that the Purveyors' Statement of Decision is ambiguous as to the scope of the Phase III Trial and makes findings on issues not set for trial as set forth in the Order After Hearing Held on November 18, 2010.

PURVEYORS' STATEMENT OF DECISION FAILS TO SET FORTH THE FACTUAL AND LEGAL BASIS FOR THE DECISION

Code of Civil Procedure, Section 632 requires that the Court issue a "Statement of Decision explaining the factual and legal basis for its decision as to each of the principal controverted issues at trial." "The Trial Court must make findings on material subsidiary issues of fact." Midwest Television, Inc. v. Scott, Lancaster Mills and Atha, Inc. (1988) 205 Cal.App.3d 442, 457. The Court in Midwest, stated the following:

"A material issue of fact is one which is relevant and essential to the judgment and closely and directly related to the trial court's determination of the ultimate issue in the case." *Midwest*, *supra*, at p. 457

The Purveyors' Statement of Decision contains for the most part conclusions of law and summary conclusions of facts without setting forth the factual and legal basis for findings on material factual subsidiary issues as requested in the Proposal Re: Content of Statement of Decision filed by Bolthouse on May 24, 2011, clarified in Exhibit A attached hereto.

|/// |///

THE PURVEYORS' STATEMENT OF DECISION IS AMBIGUOUS AND INCLUDES MATTERS OR ISSUES NOT TRIED BY THE COURT IN PHASE III

"A Statement of Decision is limited to the issues litigated in the case." Colony Ins. Co. v. Crusader Ins. Co. (2010) 188 Cal.App.4th 743, 750-751. Accordingly, it would be fundamentally unfair to include in the Statement of Decision, matters not designated for trial, after the trial is completed. The Phase III Trial was limited to safe yield and current overdraft. Including any other issues in the Statement of Decision would be inappropriate and fundamentally unfair to the parties.

The Court and counsel had numerous discussions regarding the scope of the Phase III Trial. Bolthouse, Tejon and Diamond Farming, were among the parties specifically engaged in this discussion. These parties expressed concerns regarding the scope of the Phase III Trial. Bolthouse agrees with Tejon as set forth in its Objections of Tejon Ranchcorp to Proposed Statement of Decision Re Phase III Trial that "the only issues to be decided in the Phase III Trial are (a) current safe yield, (b) whether the aquifer is currently in overdraft. To resolve this discussion and ambiguity regarding the scope of the Phase III Trial, the Court issued its Order After Hearings Held on November 18, 2010, setting forth the scope of the Phase III Trial as follows:

"The trial will commence on January 4, 2011 at 9:00 a.m. in Department 1 of the Los Angeles County Superior Court to hear evidence of the safe yield of the Antelope Valley aquifer and to further hear evidence as to whether the aquifer is in a state of overdraft such that the court should exercise equitable powers to protect the aquifer from detriment caused by any such overdraft." (Emphasis added.)

The Tentative Decision Phase Three Trial ("Tentative Decision") sets forth the proper scope of the Phase III Trial as follows:

"The first issues to be decided in the declaratory relief cause of action are the issues of overdraft and safe yield. The remaining causes of action and issues are to be tried in a subsequent phase or phases."

Bolthouse agrees with Tejon as set forth in its objections, that so-called "native safe yield", "supplemental safe yield" and "return flows" are beyond the scope of the Phase III

27 · Trial. The description of the issues tried in Phase III set forth above, combined with other language in the Purveyors' Statement of Decision, are ambiguous and suggest that issues beyond current safe yield and current overdraft were tried. As such, the Purveyors' Statement of Decision should be clarified to make clear that the only issues tried in Phase III were the current safe yield of the Antelope Valley aquifer and whether the aquifer is currently in a state of overdraft such that the Court should exercise equitable powers to protect the aquifer.

A. No Evidence To Support Factual Finding Of 50 Year Overdraft.

Bolthouse incorporates by reference the argument by Tejon that the evidence does not support a finding of overdraft for the last fifty (50) years. Further, as noted above, historical overdraft was not an issue for determination in the Phase III Trial and should not be reflected in the Statement of Decision.

B. Evaluation Of Management Areas Was Not At Issue In The Phase III Trial.

The discussion between Bolthouse, Tejon and Diamond Farming at the November 18th hearing regarding the scope of the Phase III Trial related to whether the Phase III Trial would involve evidence of differences in pumping and hydrologic effect in various areas of the Antelope Valley and aquifer for purposes of prescription or management of the basin. The Court confirmed that differences in pumping and effect in various areas of the Antelope Valley aquifer for purposes of prescription and or management of the basin was not an issue for the Phase 3 trial and issued its November 18, 2010 Order limiting the Phase III issues to safe yield and current overdraft.

Based upon the comments of the Court at the hearing, and the November 18th Order, experts were not called by Bolthouse, Diamond, the Purveyor parties and others to testify regarding the affects of pumping in one area versus pumping in other areas. The expert testimony was for the most part directed to safe yield and overdraft. Making findings as to potential affect of pumping in one area or another, or a to the effect of pumping in one area or another is inappropriate since this issue has not been litigated and since parties specifically did not call experts at trial regarding these issues based upon the court's comments and orders. Accordingly, all references to the effect of pumping in one area of the basin versus other areas

3

28

of the basin should be excluded from the Statement of Decision, including but not limited to the following statements:

"Some areas seemingly have fairly small or nominal hydroconductivity but must be included in this phase of the adjudication. Pumping in those parts of the Basin may be shown to have *de minimis* effect on other parts of the Basin while pumping in other areas within the basin appears to have very large impacts on adjacent parts of the Basin. All areas were included within the Adjudication Area because they all have some level of hydraulic connectivity, some more and some less." (Page 3, Lines 12 through 17.)

And

"Hydraulic connectivity between some portions of the Basin and other portions is so slight as to be almost (apparently) nonexistent. Pumping in those areas may have little or no effect on other areas of the Basin." (Page 7, Lines 18 through 20)

C. The So Called Native Safe Yield, Supplemental Safe Yield And Return Flows Were Not Litigated And Have Been Improperly Added By Los Angeles County And The Purveyors To The Statement Of Decision.

As noted above, the issues identified by the Court for the Phase III Trial included current safe yield and current overdraft. So called native safe yield, supplemental safe yield and return flows were not identified as issues to be tried in Phase III and were not litigated by the parties for the purposes of Phase III. The parties did not call experts on these issues nor were these concepts or findings identified by the Court as Phase III issues. The Tentative Decision Phase III Trial prepared by the Court correctly limits the scope of Phase III to safe yield and overdraft.

In its Tentative Decision, consistent with its prior Order regarding the issues to be tried in Phase III, the Court made no findings regarding so called native safe yield, supplemental safe yield and return flows, and the parties never agreed to the meaning of these terms added to the Purveyors' Statement of Decision. The Court heard testimony by numerous different experts, using different terminology, in order to determine the safe yield of the basin and to evaluate current overdraft in the basin based upon the definition of safe yield and overdraft set forth in San Fernando. San Fernando does not use the terms native safe yield and/or

 supplemental safe yield, and return flows are part of the safe yield as defined by San Fernando. Accordingly, the Purveyors' Statement of Decision should be limited to this Court's finding as to the safe yield of the basin and whether the basin is currently in overdraft. Accordingly, Page 8, Lines 6 through 19 should be excluded from the Purveyors' Statement of Decision.

D. <u>Vague And Argumentative References To Findings Regarding The Expert</u> Testimony Of The Purveyor Experts Should Be Excluded.

On Page 8, Lines 20 through 25, the Purveyor Parties request language be included that "The Court finds that the opinion testimony and evidence presented by the Public Water Suppliers⁴, the City of Los Angeles and the United States to be credible and that the opinion testimony and evidence presented by the Landowner Group parties to not be as credible as to the safe yield and overdraft issues.", is vague and non-specific. Based upon this language, it is impossible to tell what testimony the Court found to be credible and what testimony the Court found not credible as between Purveyor and Landowner experts. The argumentative conclusion also assumes that all testimony by all Purveyor experts was more credible than all testimony by all Landowner experts. Finally, the introductory comment stating that the findings are based upon a preponderance of the evidence, is vague since the reference to a finding by a preponderance of the evidence is non specific to any particular finding. Accordingly, Page 8, lines 20 through 25 should be excluded from the Purveyors' Statement of Decision.

CONCLUSION

The Statement of Decision should include explanation of the factual and legal basis for the decision, including all material and subsidiary issues of fact supporting the decision as requested on Exhibit "A.". The Statement of Decision should be limited to issues identified by the Court before trial, which would be tried in Phase III, including the current safe yield and

⁴ As previously noted, Rosamond Community services District is a public water producer but it did no align itself with the Public Water Producers. Instead, Rosamond Community Services District and the City of Lancaster aligned themselves and supported the Landowner Group parties.

whether the basin is currently in overdraft. Other discussion and arguments should be eliminated from the Statement of Decision as discussed herein. DATED: June 21, 2011 Respectfully submitted. **CLIFFORD & BROWN** By: RICHARD G. ZIMMER, ESQ. T.MARK SMITH, ESQ. Attorneys for BOLTHOUSE PROPERTIES, LLC and WM. BOLTHOUSE FARMS, INC.

Antelope Valley Groundwater Cases

Judicial Counsel Coordination Proceeding No. 4408 Santa Clara County Superior Court Case No. 1-05-CV-049053

EXHIBIT "A"

It is requested that the Statement of Decision include the factual and legal basis for all findings of the Court, including all material and subsidiary issues of fact, upon which the Phase 3 Statement of Decision is based, including but not limited to the following:

- That the Statement of Decision be limited to "the safe yield of the Antelope 1. Valley Aquifer" and "whether the Aquifer is in a state of overdraft such that the Court should exercise equitable powers to protect the Aquifer from detriment caused by any such overdraft" as set forth in the Order After Hearing Held on November 18, 2010 setting forth the scope of the Phase 3 Trial.
- 2, The legal definition of safe relied upon by the Court to determine the existence of current overdraft of the Antelope Valley Aquifer,
- 3. The legal definition of overdraft relied upon by the Court to determine the existence of current overdraft of the Antelope Valley Aquifer.
- 4. All material and subsidiary issues of fact relied upon by the Court to determine safe yield.
- All material and subsidiary issues of fact relied upon by the Court to determine that the Antelope Valley Aquifer is currently in overdraft.
- 6. The legal definition the Court used to determine whether the Aquifer is in a state of temporary surplus.
- 7. All material and subsidiary issues of fact relied upon by the Court to determine whether the Aquifer is in a state of temporary surplus.
- 8. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine the safe yield of the Antelope Valley Aguifer.

1

- 9. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that the Antelope Valley Aquifer is currently in overdraft.
- 10. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to make its findings regarding temporary surplus.
- 11. All material and subsidiary issues of fact relied upon by the Court to determine that "Reliable estimates of long-term extractions from the basin have exceeded reliable estimates of the Basin's recharge by significant margins, and empirical evidence of overdraft in the basin corroborates that conclusion," as set forth on Page 3, Lines 23-25.
- 13. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine "Reliable estimates of long-term extractions from the basin have exceeded reliable estimates of the basin's recharge by significant margins, and empirical evidence of overdraft in the basin corroborates that conclusion," as set forth on Page 3, Lines 23-25.
- 14. All material and subsidiary issues of fact relied upon by the Court to determine that "The Basin has sustained has sustained a significant loss of groundwater storage since 1951," as set forth on Page 3, Lines 25-26,
- 15. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "The Basin has sustained has sustained a significant loss of groundwater storage since 1951," as set forth on Page 3, Lines 25-26.
- 16. All material and subsidiary issues of fact relied upon by the Court to determine that "While pumping in recent years has reduced and moderated the margin between pumping and recharge as cultural conditions have changed and precipitation has increased with the appearance of "wetter" parts of the historical

BOLTHOUSE PROPERTIES, LLC'S AND WM. BOLTHOUSE FARMS, INC. 'S EXHIBIT "A" TO OBJECTION TO STATEMENT OF DECISION RE PHASE III TRIAL SUBMITTED BY LOS ANGELES COUNTY AND OTHER WATER PURYEYORS

cycle, pumping in some areas of the aquifer is continuing to cause harm to the basin," as set forth on Page 3, Line 26 to Page 4, Line 1.

- 17. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "While pumping in recent years has reduced and moderated the margin between pumping and recharge as cultural conditions have changed and precipitation has increased with the appearance of "wetter" parts of the historical cycle, pumping in some areas of the aquifer is continuing to cause harm to the basin," as set forth on Page 3, Line 26 to Page 4, Line 1.
- 18. All material and subsidiary issues of fact facts relied upon by the Court to determine that "The evidence is persuasive that current extractions continue to exceed recharge and therefore that the Basin continues to be in a state of overdraft, although by a much reduced amount," as set forth on Page 4, Lines 1-3.
- 19. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "The evidence is persuasive that current extractions continue to exceed recharge and therefore that the Basin continues to be in a state of overdraft, although by a much reduced amount," as set forth on Page 4, Lines 1-3.
- 20. All material and subsidiary issues of fact relied upon by the Court to determine that "Since 1951³, there is evidence of substantial pumping (principally agricultural in the early years of the period), with continuous lowering of water levels and subsidence extending to the present time, with intervals of only slight rises in water levels in some areas," as set forth on Page 4, Lines 3-6.
- 21. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine

Precipitation and well records prior to that year are to intermittent to be relied upon.

BOLTHOUSE PROPERTIES, LLC'S AND WM. BOLTHOUSE FARMS, INC.'S EXHIBIT "A" TO OBJECTION TO STATEMENT OF

DECISION RE PHASE III TRIAL SUBMITTED BY LOS ANGELES COUNTY AND OTHER WATER PURYEYORS

that "Since 1951, there is evidence of substantial pumping (principally agricultural in the early years of the period), with continuous lowering of water levels and subsidence extending to the present time, with intervals of only slight rises in water levels in some areas," as set forth on Page 5, Lines 8 through 12.

- 22. All material and subsidiary issues of fact relied upon by the Court to determine that "In the areas of increased pumping, in particular in the Palmdale and Lancaster areas, there is a continual lowering of water levels such that it may have a serious effect on water rights in other areas, causing cones of depression, altering natural water flow gradients, causing the lowering of water levels in adjacent areas, and causing subsidence and loss of aquifer storage capacity," as set forth on Page 4, Line 7-11.
- 23. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "In the areas of increased pumping, in particular in the Palmdale and Lancaster areas, there is a continual lowering of water levels such that it may have a serious effect on water rights in other areas, causing cones of depression, altering natural water flow gradients, causing the lowering of water levels in adjacent areas, and causing subsidence and loss of aquifer storage capacity," as set forth on Page 4, Line 7-11.
- 24. All material and subsidiary issues of fact relied upon by the Court to determine that "Given population growth, and land use changes, the Antelope Valley is at risk of an even more serious continuing overdraft in the future," as set forth on Page 4, Lines 11-12.
- 25. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "Given population growth, and land use changes, the Antelope Valley is at risk of an even more serious continuing overdraft in the future," as set forth on

Page 4, Lines 11-12.

- 26. All material and subsidiary issues of fact relied upon by the Court to determine that "While the lowering of current water levels has slowed, and water levels in some wells in some areas have risen in recent years, significant areas within the Basin continue to show declining levels, some slightly so, but many show a material lowering of water levels," as set forth on Page 4, Lines 13-15.
- 27. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "While the lowering of current water levels has slowed, and water levels in some wells in some areas have risen in recent years, significant areas within the Basin continue to show declining levels, some slightly so, but many show a material lowering of water levels," as set forth on Page 4, Lines 13-15.
- All material and subsidiary issues of fact relied upon by the Court to determine that "Thus, the Antelope Valley Adjudication Area has been in a state of overdraft for more than 50 years, and based on estimates of extraction and recharge, corroborated by physical evidence of conditions in the Basin as a whole including loss of groundwater in storage, land subsidence and changes in the amount and direction of groundwater flow to Edwards Air Force Base. While the annual amount of overdraft has lessened in recent years with decreased pumping and increased precipitation and recharge, the effects of overdraft remain and are in danger of being exacerbated with increased pumping and the prospective cyclical precipitation fluctuations shown by the historical record," as set forth on Page 4, Lines 17-24.
- 29. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "Thus, the Antelope Valley Adjudication Area has been in a state of overdraft for more than 50 years, and based on estimates of extraction and recharge, corroborated by physical evidence of conditions in the Basin as a whole including loss of groundwater in storage, land subsidence and changes in

the amount and direction of groundwater flow to Edwards Air Force Base. While the annual amount of overdraft has lessened in recent years with decreased pumping and increased precipitation and recharge, the effects of overdraft remain and are in danger of being exacerbated with increased pumping and the prospective cyclical precipitation fluctuations shown by the historical record," as set forth on Page 4, Lines 17-24.

- 30. All material and subsidiary issues of fact relied upon by the Court to determine that "The physical evidence establishes that there was significant subsidence occurring throughout the Antelope Valley Adjudication Area ranging from two to six feet or more in certain areas caused by such pumping and that measurable water levels fell in a substantial part of the Valley," as set forth on Page 4, Lines 24-27.
- 31. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "The physical evidence establishes that there was significant subsidence occurring throughout the Antelope Valley Adjudication Area ranging from two to six feet or more in certain areas caused by such pumping and that measurable water levels fell in a substantial part of the Valley," as set forth on Page 4, Lines 24-27.
- 32. All material and subsidiary issues of fact relied upon by the Court to determine that "While some of the ongoing subsidence may be attributable to residual subsidence (from earlier periods of shortfall) a preponderance of the evidence establishes that ongoing and continued subsidence is caused, in part, by ongoing groundwater extractions in excess of the Basin's safe yield," as set forth on Page 4, Line 27 through Page 5, Line 3.
- 33. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "While some of the ongoing subsidence may be attributable to residual BOLTHOUSE PROPERTIES, LLC'S AND WM. BOLTHOUSE FARMS, INC.'S EXHIBIT "A" TO OBJECTION TO STATEMENT OF DECISION RE PHASE III TRIAL SUBMITTED BY LOS ANGELES COUNTY AND OTHER WATER PURVEYORS

subsidence (from earlier periods of shortfall) a preponderance of the evidence establishes that ongoing and continued subsidence is caused, in part, by ongoing groundwater extractions in excess of the Basin's safe yield," as set forth on Page 4, Line 27 through Page 5, Line 3.

- 34. All material and subsidiary issues of fact relied upon by the Court to determine that "One Landowner Group expert selected two shorter base periods (the total time span of which was considerably less than the 50 year period used by the Public Water Suppliers' experts which the Court believes is more credible), each having different estimated average natural recharge based upon different precipitation averages from each base period," as set forth on Page 5, Lines 15-18.
- 35. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "One Landowner Group expert selected two shorter base periods (the total time span of which was considerably less than the 50 year period used by the Public Water Suppliers' experts which the Court believes is more credible), each having different estimated average natural recharge based upon different precipitation averages from each base period," as set forth on Page 5, Lines 15-18.
- 36. All material and subsidiary issues of fact relied upon by the Court to determine that "A period of precipitation fluctuations from 1951 to 2005 satisfies that standard. Shorter periods do not and the Court does not find those shorter base periods to produce accurate results. The Court accepts the base period selected by the Public Water Supplier experts as the more credible and accurate representation of long-term conditions in the Basin," as set forth on Page 5, Lines 23-27.
- 37. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine BOLTHOUSE PROPERTIES, LLC'S AND WM, BOLTHOUSE FARMS, INC.'S EXHIBIT "A" TO OBJECTION TO STATEMENT OF DECISION RE PHASE III TRIAL SUBMITTED BY LOS ANGELES COUNTY AND OTHER WATER PURYEYORS

that "A period of precipitation fluctuations from 1951 to 2005 satisfies that standard. Shorter periods do not and the Court does not find those shorter base periods to produce accurate results. The Court accepts the base period selected by the Public Water Supplier experts as the more credible and accurate representation of long-term conditions in the Basin," as set forth on Page 5, Lines 23-27.

- 38. All material and subsidiary issues of fact relied upon by the Court to determine that "The pumping extractions are not seriously in dispute by any of the experts who testified. All seem to agree that pumping currently is estimated to range from 130,000 to 150,000 acre feet a year," as set forth on Page 5, Line 28 through Page 6, Line 2.
- 39. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "The pumping extractions are not seriously in dispute by any of the experts who testified. All seem to agree that pumping currently is estimated to range from 130,000 to 150,000 acre feet a year," as set forth on Page 5, Line 28 through Page 6, Line 2.
- 40. All material and subsidiary issues of fact relied upon by the Court to determine that "Other sources of recharge to the Basin, including artificial recharge-water introduced into the Basin from external sources are not in dispute," as set forth on Page 6, Lines 5-7.
- 41. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "Other sources of recharge to the Basin, including artificial recharge-water introduced into the Basin from external sources are not in dispute," as set forth on Page 6, Lines 5-7.

- 42. All material and subsidiary issues of fact relied upon by the Court to determine that "The nature of the agricultural duties has changed as well," as set forth on Page 6, Line 11.
- 43. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "The nature of the agricultural duties has changed as well," as set forth on Page 6, Line 11.
- 44. All material and subsidiary issues of fact relied upon by the Court to determine that "The type of irrigation used by farmers has become more efficient and less water is needed per acre (depending on the crops grown) with more efficient uses of water," as set forth on Page 6, Lines 11-13.
- 45. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "The type of irrigation used by farmers has become more efficient and less water is needed per acre (depending on the crops grown) with more efficient uses of water," as set forth on Page 6, Lines 11-13.
- 46. All material and subsidiary issues of fact relied upon by the Court to determine that "But there has also been an increase as well as a change in the nature of the type of agriculture in the Valley in material quantities in recent years," as set forth on Page 6, Lines 13-15.
- 47. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "But there has also been an increase as well as a change in the nature of the type of agriculture in the Valley in material quantities in recent years," as set forth on Page 6, Lines 13-15.
- 48. All material and subsidiary issues of fact relied upon by the Court to determine that "The evidence presented and observable conditions in the valley are inconsistent with those conclusions" as set forth on Page 7, Lines 11-12.

- 49. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "The evidence presented and observable conditions in the valley are inconsistent with those conclusions" as set forth on Page 7, Lines 11-12.
- All material and subsidiary issues of fact relied upon by the Court to determine that "If there were a surplus, even in the shortened base periods used by the Landowner Group experts, there would not be land subsidence, nor declining water levels" as set forth on Page 7, Lines 11-13.
- 51. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "If there were a surplus, even in the shortened base periods used by the Landowner Group experts, there would not be land subsidence, nor declining water levels" as set forth on Page 7, Lines 11-13.
- 52. All material and subsidiary issues of fact relied upon by the Court to determine that "The Basin's physical conditions are inconsistent with those Landowner Group estimates that there is and has been a surplus of water in the Basin and the Court finds these opinions unreliable" as set forth on Page 7, Lines 13-15.
- 53. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "The Basin's physical conditions are inconsistent with those Landowner Group estimates that there is and has been a surplus of water in the Basin and the Court finds these opinions unreliable" as set forth on Page 7, Lines 13-15.
- 54. All material and subsidiary issues of fact relied upon by the Court to determine that "Weighing the various opinions, however, the Court finds by a preponderance of the evidence that setting a total safe yield at a conservative 110,000 acre feet per year will permit management of the Basin in such a way as to preserve the rights of all parties in accordance with the Constitution and laws

of the State of California" as set forth on Page 7, Line 26 through Page 8, Line 1.

- 55. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "Weighing the various opinions, however, the Court finds by a preponderance of the evidence that setting a total safe yield at a conservative 110,000 acre feet per year will permit management of the Basin in such a way as to preserve the rights of all parties in accordance with the Constitution and laws of the State of California" as set forth on Page 7, Line 26 through Page 8, Line 1.
- All material and subsidiary issues of fact relied upon by the Court to determine that "It should not be assumed that the safe yield management number may not change as climate circumstances and pumping may change, or as the empirical evidence based on experience in managing the Basin suggests it is either too high or too low" as set forth on Page 8, Line 27 through Page 9, Line 2.
- 57. The testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine that "It should not be assumed that the safe yield management number may not change as climate circumstances and pumping may change, or as the empirical evidence based on experience in managing the Basin suggests it is either too high or too low" as set forth on Page 8, Line 27 through Page 9, Line 2.
- 58. If over Landowner objections, the Court includes in the Statement of Decision the "Native Safe Yield" issue added by the Purveyor parties on page 8, starting on line 6, all material and subsidiary issues of fact relied upon by the Court to determine "Native Safe Yield."
- 59. If over Landowner objections, the Court includes in the Statement of Decision the "Native Safe Yield" issue added by the Purveyor parties on page 8, starting on line 6, the testimony of each testifying expert which the Court relied upon to BOLTHOUSE PROPERTIES, LLC'S AND WM. BOLTHOUSE FARMS, INC.'S EXHIBIT "A" TO OBJECTION TO STATEMENT OF DECISION RE PHASE III TRIAL SUBMITTED BY LOS ANGELES COUNTY AND OTHER WATER PURVEYORS

- establish all material and subsidiary issues of fact relied upon by the Court to determine "Native Safe Yield."
- 60. If over Landowner objections, the Court includes in the Statement of Decision the "Supplemental Safe Yield" issue added by the Purveyor parties on page 8, starting on line 6, all material and subsidiary issues of fact relied upon by the Court to determine "Supplemental Safe Yield."
- 61. If over Landowner objections, the Court includes in the Statement of Decision the "Supplemental Safe Yield" issue added by the Purveyor parties on page 8, starting on line 6, the testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine "Supplemental Safe Yield."
- 62. If over Landowner objections, the Court includes in the Statement of Decision the "Return Flows" issue added by the Purveyor parties on page 8, starting on line 6, all material and subsidiary issues of fact relied upon by the Court to determine "Return Flows."
- 63. If over Landowner objections, the Court includes in the Statement of Decision the "Return Flows" issue added by the Purveyor parties on page 8, starting on line 6, the testimony of each testifying expert which the Court relied upon to establish all material and subsidiary issues of fact relied upon by the Court to determine "Return Flows."
