

DORN SEES BRIGHT FUTURE

'Long-Range Plans in Effect to Assure Orderly Growth'

California's "last frontier," the Antelope Valley is fast fading into the horizon of progress, according to Warren M. Dorn, Chairman of the Los Angeles County Board of Supervisors. "People keep coming and

coming and coming to the expansive Antelope Valley located in the fabulous 5th Supervisorial District in which I have the honor to serve as Supervisor."

"With people come industry and commerce and trade, and problems. Problems that arise from growing pains with the increased population. With 'an ounce of prevention worth more than a pound of cure' in mind, a policy of master long-range planning is in effect to assure the orderly future growth and development of the Antelope Valley," Dorn says.

The Antelope Valley portion of Los Angeles County is comprised of foothills and the open plain sloping gently downward to the north toward the county boundary.

"With the coming of the Feather River Project, freeways, airports, master roads, Edwards Air Force Base, Federal Aviation Agency Control Center for Southern California, United States Air Force Plant No. 42, and the last frontier for agriculture development, a population figure of 160,000 for the Antelope Valley has been projected for the year 1970," Dorn said.

Dorn keeps moving, build-

ing projects, water system expansion, highway improvements and development of recreational facilities in the Antelope Valley with new surveys, directives, motions for approval, and document signatures.

Of course one of the major programs the supervisor is vitally interested in is the Antelope Valley Waste Water Reclamation Project to be located on the Gen. Wm. J. Fox Airfield. "At the present time there are several million gallons of waste water," Dorn says, "with a potential of millions of gallons in the future, being diverted into the desert and evaporated. This water cannot be wasted. Every drop must be conserved and used and reused, as this commodity is too precious to be dissipated."

Dorn also continues to push for the eventual use of the proposed Feather River Project Water Reservoirs in the Antelope Valley as recreational lakes.

Another long range project on which much effort is being expended, Dorn stated, is the development of a major airport in the

Antelope Valley. "It is imperative that this major facility be located in the Antelope Valley because at the present time the Antelope Valley is the only area near the metropolitan Los Angeles complex that has sufficient land for this project."

In summarizing, Dorn stated, "The County of Los Angeles is vitally interested in the continued growth of the Antelope Valley area, and with the continued help and support of the people and organizations, the indus-
